Solomon, House of. Lord Bacon composed, in his *New Atlantis*, an apologue, in which he describes the island of Bensalem—that is, island of the Sons of Peace—and on it an edifice called the House of Solomon, where there was to be a confraternity of philosophers devoted to the acquisition of knowledge. Nicolai thought that out of this subsequently arose the society of Freemasons, which was, he supposes, established by Elias Ashmole and his friends. (See *Nicolai*.)

Solomon, Temple of. See *Temple of Solomon*.

Solstices. The days on which the sun reaches his greatest northern and southern declination, which are the 21st of June and the 22d of December. Near these days are those in which the Christian church commemorates St. John the Baptist and St. John the Evangelist, who have been selected as the patron saints of Freemasonry for reasons which are explained in the article on the *Dedication of a Lodge*, which see.

Son of Hiram. A mixed tradition states that Aynon was a son of Hiram Abif, and was appointed master of the workmen who hewed the cedars and shaped the timber for the temple, and was recognized for his geometrical knowledge and skill as an engraver. (See *Aynon*.)

Songs of Masonry. The song formed in early times a very striking feature in what may be called the domestic manners of the Masonic Institution. Nor has the custom of festive entertainments been yet abandoned. In the beginning of the eighteenth century songs were deemed of so much importance that they were added to the Books of Constitutions in Great Britain and on the Continent, a custom which was followed in America, where all the early Monitors contain an abundant supply of lyrical poetry. In the *Constitutions* published in 1723 we find the well-known Entered Apprentice's song, written by Matthew Birkhead, which still retains its popularity among Masons, and has attained an elevation to which its intrinsic merits as a lyrical composition would hardly entitle it. Songs appear to have been incorporated into the ceremonies of the Order at the revival of Masonry in 1717. At that time, to use the language of the venerable Oliver, "Labor and refreshment relieved each other like two loving brothers, and the gravity of the former was rendered more engaging by the characteristic cheerfulness and jocund gayety of the latter." In those days the word "refreshment" had a practical meaning, and the Lodge was often called from labor that the brethren might indulge in innocent gaiety, of which the song formed an essential part. This was called harmony, and the brethren who were blessed with talents for vocal music were often invited "to contribute to the harmony of the Lodge." Thus, in the minute-book of a Lodge at Lincoln, in England, in the year 1732, which is quoted by Dr. Oliver, the records show that the Master usually "gave an elegant charge, also went through an examination, and the Lodge was closed with song and decent merriment." In this custom of singing there was an established system. Each officer was furnished with a song appropriate to his office, and each degree had a song for itself.

Thus, in the first edition of the *Book of Constitutions*, we have the "Master's Song," which, says Dr. Anderson, the author, is "to be sung with a chorus—when the Master shall give leave—either one part only or all together, as he pleases"; the "Warden's song," which was "to be sung and played at the Quarterly Communication"; the "Fellow-Craft's song," which was to be sung and played at the grand feast; and, lastly, the "Entered 'Prentiss' song," which was "to be sung when all grave business is over, and with the Master's leave."

In the second edition the number was greatly increased, and songs were appropriated to the Deputy Grand Master, the Secretary, the Treasurer, and other officers. For all this provision was made in the *Old Charges* so that there should be no confusion between the

hours of labor and refreshment; for while the brethren were forbidden to behave "ludicrously or jestingly while the Lodge is engaged in what is serious or solemn," they were permitted, when work was over, "to enjoy themselves with innocent mirth."

The custom of singing songs peculiarly appropriate to the Craft at their Lodge meetings, when the grave business was over, was speedily introduced into France and Germany, in which countries a large number of Masonic songs were written and adopted, to be sung by the German and French Masons at their "Table Lodges," which corresponded to the "refreshment" of their English brethren. The lyrical literature of Masonry has, in consequence of this custom, assumed no inconsiderable magnitude; as an evidence of which it may be stated that Kloss, in his *Bibliography of Freemasonry*, gives a catalogue—by no means a perfect one—of two hundred and thirteen Masonic song-books published between the years 1734 and 1837, in the English, German, French, Danish, and Polish languages.

The Masons of the present day have not abandoned the usage of singing at their festive meetings after the Lodge is closed; but the old songs of Masonry are passing into oblivion, and we seldom hear any of them, except sometimes the never-to-be-forgotten Apprentice's song of Matthew Birkhead. Modern taste and culture reject the rude but hearty stanzas of the old song-makers, and the more artistic and pathetic productions of Mackay, and Cooke, and Morris, and Dibdin, and Wesley, and other writers of that class, are taking their place.

Some of these songs cannot be strictly called Masonic, yet the covert allusions here and there of their authors, whether intentional or accidental, have caused them to be adopted by the Craft and placed among their minstrelsy. Thus the well-known ballad of "Tubal Cain," by Charles Mackay, always has an inspiring effect when sung at a Lodge banquet, because of the reference to this old worker in metals, whom the Masons fondly consider as one of the mythical founders of their Order; although the song itself has in its words or its ideas no connection whatever with Freemasonry. Burns's "Auld Lang Syne" is another production not strictly Masonic, which has met with the universal favor of the Craft, because the warm fraternal spirit that it breathes is in every way Masonic, and hence it has almost become a rule of obligation that every festive party of Freemasons should close with the great Scotchman's invocation to part in love and kindness.

But Robert Burns has also supplied the Craft with several purely Masonic songs, and his farewell to the brethren of Tarbolton Lodge, beginning,

> "Adieu! a heart-warm, fond adieu,
> Dear brothers of the mystic tie,"

is often sung with pathetic effect at the Table Lodges of the Order.

As already observed, we have many productions of our Masonic poets which are taking the place of the older and coarser songs of our predecessors. It would be tedious to name all who have successfully invoked the Masonic muse. Masonic songs—that is to say, songs whose themes are Masonic incidents, whose language refers to the technical language of Freemasonry, and whose spirit breathes its spirit and its teachings—are now a well-settled part of the literary curriculum of the Institution. At first they were all festive in character and often coarse in style, with little or no pretension to poetic excellence. Now they are festive, but refined; or sacred, and used on occasions of public solemnity; or mythical, and constituting a part of the ceremonies of the different degrees. But they all have a character of poetic art which is far above the mediocrity so emphatically condemned by Horace.

Son of a Mason. The son of a Mason is called a Louveteau, and is entitled to certain privileges, for which see *Louveteau* and *Lewis*.

Sons of Light. The science of Freemasonry often has received the title of "Lux," or "Light," to indicate that mental and moral illumination is the object of the Institution. Hence Freemasons are often called "Sons of Light."

Sons of the Prophets. We repeatedly meet in the Old Testament with references to the *Beni Hanabiim*, or sons of the prophets. These were the disciples of the prophets, or wise men of Israel, who underwent a course of esoteric instruction in the secret institutions of the Nabiim, or prophets, just as the disciples of the Magi did in Persia, or of Pythagoras in Greece. "These sons of the prophets," says Stehelin (*Rabbinical Literature*, i., 16), "were their disciples, brought up under their tuition and care, and therefore their masters or instructors were called their fathers."

Sons of the Widow. This is a title often given to Freemasons in allusion to Hiram the Builder, who was "a widow's son, of the tribe of Naphtali." By the advocates of the theory that Freemasonry originated with the exiled house of Stuart, and was organized as a secret institution for the purpose of reestablishing that house on the throne of Great Britain, the phrase has been applied as if referring to the adherents of Queen Henrietta, the widow of Charles I.

Sorbonne. A college of theological professors in Paris, who exercised a great influence over religious opinion in France during the sixteenth, seventeenth, and greater part of the eighteenth centuries. The bigotry and intolerance for which they were remarkable made them the untiring persecutors of Freemasonry. In the year 1748 they published a *Letter and Consultation on the Society of Freemasons*, in which they declared that it was an illegal association, and that the meetings of its members should be prohibited. This was republished in 1764, at Paris, by the Freemasons, with a reply, in the form of an appendix,

by De la Tierce, and again in 1766, at Berlin, with another reply by a writer under the assumed name of Jarhetti.

Sorrow Lodge. It is the custom among Masons on the Continent of Europe to hold special Lodges at stated periods, for the purpose of commemorating the virtues and deploring the loss of their departed members, and other distinguished worthies of the Fraternity who have died. These are called Funeral or Sorrow Lodges. In Germany they are held annually; in France at longer intervals. In America the custom has been introduced by the Ancient and Accepted Rite, whose Sorrow Lodge ritual is peculiarly beautiful and impressive, and the usage has been adopted by many Lodges of the American Rite. On these occasions the Lodge is clothed in the habiliments of mourning and decorated with the emblems of death, solemn music is played, funereal dirges are chanted, and eulogies on the life, character, and Masonic virtues of the dead are delivered.

Soter. A Greek appellation implying "Savior."

Soul of Nature. A platonic expression, more properly the *anima mundi*, that has been adopted into the English Royal Arch system to designate the Sacred Delta, or Triangle, which Dunckerley, in his lecture, considered as the symbol of the Trinity. "So highly," says the modern lecture, "indeed did the ancients esteem the figure, that it became among them an object of worship as the great principle of animated existence, to which they gave the name of God because it represented the animal, mineral, and vegetable creation. They also distinguished it by an appellation which, in the Egyptian language, signifies the *Soul of Nature*." Dr. Oliver (*Juris.*, p. 446) warmly protests against the introduction of this expression as an unwarrantable innovation, borrowed most probably from the Rite of the Philalethes. It has not been introduced into the American system.

South. When the sun is at his meridian height, his invigorating rays are darted from the south. When he rises in the east, we are called to labor; when he sets in the west, our daily toil is over; but when he reaches the south, the hour is high twelve, and we are summoned to refreshment. In Masonry, the south is represented by the Junior Warden and by the Corinthian column, because it is said to be the place of beauty.

South Carolina. Freemasonry was introduced into South Carolina by the organization of Solomon's Lodge, in the city of Charleston, on October 28, 1736, the Warrant for which had been granted in the previous year by Lord Weymouth, Grand Master of England. John Hammerton was, in 1736, appointed Provincial Grand Master by the Earl of Loudoun. In 1738 a Lodge was established in Charleston by the St. John's Grand Lodge of Boston; but it does not appear to have long existed. The Provincial Lodge appears after some time to have suspended operations, for a second Provincial Grand Lodge was established by the Deputation of the Marquis of Carnarvon to Chief Justice Leigh in 1754. In 1787 this body assumed independence, and became the "Grand Lodge of Free and Accepted Masons of South Carolina," Barnard Elliott being the first Grand Master. As early as 1783 the Atholl or Ancient Masons invaded the jurisdiction of South Carolina, and in 1787, there being then five Lodges of the Ancients in the State, they held a Convention, and on the 24th of March organized the "Grand Lodge of Ancient York Masons of South Carolina." Between the Modern and the Ancient Grand Lodge there was always a very hostile feeling until the year 1808, when a union was effected; which was, however, but temporary, for a disruption took place in the following year. However, the union was permanently established in 1817, when the two Grand Lodges were merged into one, under the name of the "Grand Lodge of Ancient Freemasons of South Carolina."

The Grand Royal Arch Chapter was organized on May 29, 1812.

The Grand Council of Royal and Select Masters was established February, 1860, by eight Councils, who had received their Charters under the authority of the Supreme Council of the Scottish Rite.

The Grand Encampment of Knights Templar was instituted in 1826 by three subordinate Encampments, but it enjoyed only an ephemeral existence, and is not heard of after the year 1830. There is now but one Commandery in the State, which derives its Warrant from the Grand Encampment of the United States, the date of which is May 17, 1843.

The Supreme Council of the Ancient and Accepted Rite was opened on May 31, 1801. This body is now recognized as the Mother Council of the World.

Sovereign. An epithet applied to certain degrees which were invested with supreme power over inferior ones; as, *Sovereign Prince of Rose Croix*, which is the highest degree of the French Rite and of some other Rites, and *Sovereign Inspector-General*, which is the controlling degree of the Ancient and Accepted Rite. Some degrees, originally Sovereign in the Rites in which they were first established, in being transferred to other Rites, have lost their sovereign character, but still improperly retain the name. Thus the Rose Croix Degree of the Scottish Rite, which is there only the Eighteenth, and subordinate to the Thirty-third or Supreme Council, still retains everywhere, except in the Southern Jurisdiction of the United States, the title of Sovereign Prince of Rose Croix.

Sovereign Commander of the Temple. (*Souverain Commandeur du Temple.*) Styled in the more recent rituals of the Southern Supreme Council "Knight Commander of the Temple." This is the Twenty-seventh Degree of the Ancient and Accepted Scottish Rite. The presiding officer is styled "Most Illustrious and Most Valiant," the Wardens are called "Most Sovereign Commanders,"

and the Knights "Sovereign Commanders." The place of meeting is called a "Court." The apron is flesh-colored, lined and edged with black, with a Teutonic cross encircled by a wreath of laurel and a key beneath, all inscribed in black upon the flap. The scarf is red bordered with black, hanging from the right shoulder to the left hip, and suspending a Teutonic cross in enameled gold. The jewel is a triangle of gold, on which is engraved the Ineffable Name in Hebrew. It is suspended from a white collar bound with red and embroidered with four Teutonic crosses.

Vassal, Ragon, and Clavel are all wrong in connecting this degree with the Knights Templar, with which Order its own ritual declares that it is not to be confounded. It is without a lecture. Vassal expresses the following opinion of this degree:

"The twenty-seventh degree does not deserve to be classed in the Scottish Rite as a degree, since it contains neither symbols nor allegories that connect it with initiation. It deserves still less to be ranked among the philosophic degrees. I imagine that it has been intercalated only to supply an hiatus, and as a memorial of an Order once justly celebrated."

It is also the Forty-fourth Degree of the Rite of Mizraim.

Sovereign Grand Inspector-General. The Thirty-third and last degree of the Ancient and Accepted Scottish Rite. The Latin Constitutions of 1786 call it "Tertius et trigesimus et sublimissimus gradus," i. e., "the Thirty-third and Most Sublime Degree"; and it is styled "the Protector and Conservator of the Order." The same Constitutions, in Articles I. and II., say:

"The thirty-third degree confers on those Masons who are legitimately invested with it, the quality, title, privilege, and authority of Sovereign [Supremorum] Grand Inspectors-General of the Order.

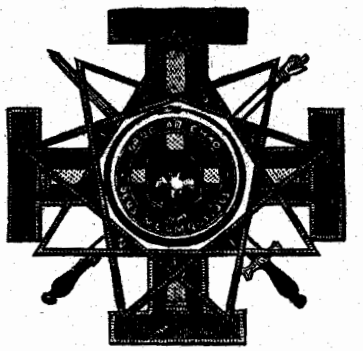
"The peculiar duty of their mission is to teach and enlighten the brethren; to preserve charity, union, and fraternal love among them; to maintain regularity in the works of each degree, and to take care that it is preserved by others; to cause the dogmas, doctrines, institutes, constitutions, statutes, and regulations of the Order to be reverently regarded, and to preserve and defend them on every occasion; and, finally, everywhere to occupy themselves in works of peace and mercy."

The body in which the members of this degree assemble is called a Supreme Council.

The symbolic color of the degree is white, denoting purity.

The distinctive insignia are a sash, collar, jewel, Teutonic cross, decoration, and ring.

The sash is a broad, white watered ribbon, bordered with gold, bearing on the front a triangle of gold glittering with rays of gold, which has in the center the numerals 33, with a sword of silver, directed from above, on each side of the triangle, pointing to its center. The sash, worn from the right shoulder to the left hip, ends in a point, and is fringed with gold, having at the junction a circular band of scarlet and green containing the jewel of the Order.



The collar is of white watered ribbon fringed with gold, having the rayed triangle at its point and the swords at the sides. By a regulation of the Southern Supreme Council of the United States, the collar is worn by the active, and the sash by the honorary, members of the Council.

The jewel is a black double-headed eagle, with golden beaks and talons, holding in the latter a sword of gold, and crowned with the golden crown of Prussia.

The red Teutonic cross is affixed to the left side of the breast.

The decoration rests upon a Teutonic cross. It is a nine-pointed star, namely, one formed by three triangles of gold one upon the other, and interlaced from the lower part of the left side to the upper part of the right a sword extends, and in the opposite direction is a hand of (as it is called) *Justice*. In the center is the shield of THE ORDER, *azure* charged with an eagle like that on the banner, having on the dexter side a Balance *or*, and on the sinister side a Compass of the second, united with a Square of the second. Around the whole shield runs a band of the first, with the Latin inscription, of the second, ORDO AB CHAO, which band is enclosed by two circles, formed by two Serpents of the second, each biting his own tail. Of the smaller triangles that are formed by the intersection of the greater ones, those nine that are nearest the band are of

crimson color, and each of them has one of the letters that compose the word S. A. P. I. E. N. T. I. A.

The ring is a triple one, like three small rings, each one-eighth of an inch wide, side by side, and having on the inside a delta surrounding the figures 33, and inscribed with the wearer's name, the letters S.·. G.·. I.·. G.·., and the motto of the Order, "Deus meumque Jus." It is worn on the fourth finger of the left hand in the Southern Jurisdiction and on the third in the Northern Jurisdiction of America.

Until the year 1801, the Thirty-third Degree was unknown. Until then the highest degree of the Rite, introduced into America by Stephen Morin, was the Sublime Prince of the Royal Secret, or the Twenty-fifth of the Rite established by the Emperors of the East and West. The administrative heads of the Order were styled Grand Inspectors-General and Deputy Inspectors-General; but these were titles of official rank and not of degree. Even as late as May 24, 1801, John Mitchell signs himself as "Kadosh, Prince of the Royal Secret and Deputy Inspector-General." The document thus signed is a Patent which certifies that Frederick Dalcho is a Kadosh, and Prince of the Royal Secret, and which creates him a Deputy Inspector-General. But on May 31, 1801, the Supreme Council was created at Charleston, and from that time we hear of a Rite of thirty-three degrees, eight having been added to the twenty-five introduced by Morin, and the last being called Sovereign Grand Inspector-General. The degree being thus legitimately established by a body which, in creating a Rite, possessed the prerogative of establishing its classes, its degrees and its nomenclature were accepted unhesitatingly by all subsequently created Supreme Councils; and it continues to be recognized as the administrative head of the Ancient and Accepted Scottish Rite.

Sovereign Master. 1. The presiding officer in a Council of Companions of the Red Cross. He represents Darius, King of Persia. 2. The Sixtieth Degree of the Rite of Mizraim.

Sovereign Prince Mason. A title first conferred on its members by the Council of Emperors of the East and West.

Sovereign Prince of Rose Croix. See *Rose Croix*.

Spain. Anderson says (*Constit.*, 2d ed., p. 194) that a Deputation was granted by Lord Coleraine, Grand Master, in 1728, for constituting a Lodge at Madrid; another in 1731, by Lord Lovell, to Capt. James Cummerford, to be Provincial Grand Master of Andalusia; and a third in 1732, by Lord Montagu, for establishing a Lodge at Valenciennes. Smith, writing in 1783, says (*Use and Abuse*, p. 203): "The first, and, I believe, the only Lodge established in Spain was by a Deputation sent to Madrid to constitute a Lodge in that city, under the auspices of Lord Coleraine, A. D. 1727, which continued under English jurisdiction till the year 1776, when it refused that subordination, but still continues to meet under its own authority." From these two differing authorities we derive only this fact, in which they concur: that Masonry was introduced into Spain in 1727, more probably 1728, by the Grand Lodge of England. Smith's statement that there never was a second Lodge at Madrid is opposed by that of Gädicke, who says that in 1751 there were two Lodges in Madrid.

Llorente says (*Hist. Inquis.*, p. 525) that in 1741 Philip V. issued a royal ordinance against the Masons, and, in consequence, many were arrested and sent to the galleys. The members of the Lodge at Madrid were especially treated by the Inquisition with great severity. All the members were arrested, and eight of them sent to the galleys. In 1751, Ferdinand VI., instigated by the Inquisitor Joseph Torrubia, published a decree forbidding the assemblies of Freemasons, and declaring that all violators of it should be treated as persons guilty of high treason. In that year, Pope Benedict XIV. had renewed the bull of Clement XII. In 1793, the Cardinal Vicar caused a decree of death to be promulgated against all Freemasons. Notwithstanding these persecutions of the Church and the State, Freemasonry continued to be cultivated in Spain; but the meetings of the Lodges were held with great caution and secrecy.

On the accession of Joseph Napoleon to the throne in 1807, the liberal sentiments that characterized the Napoleonic dynasty prevailed, and all restrictions against the Freemasons were removed. In October, 1809, a National Grand Lodge of Spain was established, and, as if to make the victory of tolerance over bigotry complete, its meetings were held in the edifice formerly occupied by the Inquisition, which body had been recently abolished by an imperial decree.

But the York Rite, which had been formerly practised, appears now to have been abandoned, and the National Grand Lodge just alluded to was constituted by three Lodges of the Scottish Rite which, during that year, had been established at Madrid. From that time the Masonry of Spain has been that of the Ancient and Accepted Scottish Rite.

Clavel says (*Hist. Pittoresque*, p. 252) that "in 1810, the Marquis de Clermont-Tonnere, member of the Supreme Council of France, created, near the National Grand Lodge, (of the Scottish Rite in Spain,) a Grand Consistory of the thirty-second degree; and, in 1811, the Count de Grasse added to this a Supreme Council of the thirty-third degree, which immediately organized the National Grand Lodge under the title of Grand Orient of Spain and the Indies. The overthrow of French domination dispersed, in 1813, most of the Spanish Masons, and caused the suspension of Masonic work in that country."

In 1814, Ferdinand VII., having succeeded to the throne, restored the Inquisition with all its oppressive prerogatives, proscribed Freemasonry, and forbade the meetings of the Lodges. It was not until 1820 that the Grand Orient of Spain recovered its activity, and in

1821 we find a Supreme Council in actual existence, the history of whose organization was thus given, in 1870, to Bro. A. G. Goodall, the Representative of the Supreme Council of the Northern Jurisdiction of the United States:

"The parties now claiming to be a Supreme Council assert that the Count de Tilly, by authority from his cousin, De Grasse Tilly, constituted a Supreme Council, Ancient Accepted Rite, at Seville, in 1807; but in consequence of a revolution, in which Tilly was a prominent actor, the Grand Body was removed to Aranjuez, where, on the 21st of September, 1808, the officers were duly installed; Saavedra as Sov.·. Gr.·. Commander, ad vitam; Count de Tilly, Lieutenant Grand Commander; Carlos de Rosas, Grand Treasurer; Jovellanos, Grand Chancellor; Quintana, Grand Secretary; Pelajos, Captain of Guard. On the death of Tilly and Saavedra, Badilla became Sovereign Grand Commander; and under his administration the Supreme Council was united with the Grand Orient of Spain at Granada, in 1817, under the title of Supreme Council, Grand Orient National of Spain."

On the death of Ferdinand VII. in 1853, the persecutions against the Freemasons ceased, because, in the civil war that ensued, the priests lost much of their power. Between 1845 and 1849, according to Findel (*Hist.*, p. 584), several Lodges were founded and a Grand Orient established, which appears to have exercised powers up to at least 1848. But subsequently, during the reign of Queen Isabella, Masonry again fell into decadence. It has now, however, revived, and many Lodges are in existence who, three years ago, were under the jurisdiction of the Grand Orient of Portugal. There is now a Grand Orient of Spain at Madrid with 14 Chapters and 87 Lodges under its jurisdiction.

Spartacus. The characteristic name assumed by Weishaupt, the founder of the Order of the Illuminati.

Speculative Masonry. The lectures of the Symbolic degrees instruct the neophyte in the difference between the Operative and the Speculative divisions of Masonry. They tell him that "we work in Speculative Masonry, but our ancient brethren wrought in both Operative and Speculative." The distinction between an Operative art and a Speculative science is, therefore, familiar to all Masons from their early instructions.

To the Freemason, this Operative art has been symbolized in that intellectual deduction from it which has been correctly called Speculative Masonry. At one time each was an integral part of one undivided system. Not that the period ever existed when every Operative Mason was acquainted with, or initiated into, the Speculative science. Even now, there are thousands of skilful artisans who know as little of that as they do of the Hebrew language which was spoken by its founder. But Operative Masonry was, in the inception of our history, and is, in some measure, even now, the skeleton upon which was strung the living muscles and tendons and nerves of the Speculative system. It was the block of marble, rude and unpolished it may have been, from which was sculptured the life-breathing statue.

Speculative Masonry (which is but another name for Freemasonry in its modern acceptation) may be briefly defined as the scientific application and the religious consecration of the rules and principles, the language, the implements, and materials of Operative Masonry to the veneration of God, the purification of the heart, and the inculcation of the dogmas of a religious philosophy.

Speculative Masonry, or Freemasonry, is then a system of ethics, and must therefore, like all other ethical systems, have its distinctive doctrines. These may be divided into three classes, viz., the Moral, the Religious, and the Philosophical.

1. *The Moral Doctrines.* These are dependent on, and spring out of, its character as a social institution. Hence among its numerous definitions is one that declares it to be "a science of morality," and morality is said to be, symbolically, one of the precious jewels of a Master Mason. Freemasonry is, in its most patent and prominent sense, that which most readily and forcibly attracts the attention of the uninitiated; a fraternity, an association of men bound together by a peculiar tie; and therefore it is essential, to its successful existence, that it should, as it does, inculcate, at the very threshold of its teachings, obligation of kindness, man's duty to his neighbor. "There are three great duties," says the Charge given to an Entered Apprentice, "which, as a Mason, you are charged to inculcate—to God, your neighbor, and yourself." And the duty to our neighbor is said to be that we should act upon the square, and do unto him as we wish that he should do unto ourselves.

The object, then, of Freemasonry, in this moral point of view, is to carry out to their fullest practical extent those lessons of mutual love and mutual aid that are essential to the very idea of a brotherhood. There is a socialism in Freemasonry from which spring all Masonic virtues—not that modern socialism exhibited in a community of goods, which, although it may have been practised by the primitive Christians, is found to be uncongenial with the independent spirit of the present age—but a community of sentiment, of principle, of design, which gives to Masonry all its social, and hence its moral, character. As the old song tells us:

> "That virtue has not left mankind,
> Her social maxims prove,
> For stamp'd upon the Mason's mind
> Are unity and love."

Thus the moral design of Freemasonry, based upon its social character, is to make men better to each other; to cultivate brotherly love, and to inculcate the practise of all those virtues which are essential to

the perpetuation of a brotherhood. A Mason is bound, say the Old Charges, to obey the moral law, and of this law the very keystone is the Divine precept—the "Golden Rule" of our Lord—to do unto others as we would that they should do unto us. To relieve the distressed, to give good counsel to the erring, to speak well of the absent, to observe temperance in the indulgence of appetite, to bear evil with fortitude, to be prudent in life and conversation, and to dispense justice to all men, are duties that are inculcated on every Mason by the moral doctrines of his Order.

These doctrines of morality are not of recent origin. They are taught in all the Old Constitutions of the Craft, as the parchment records of the fifteenth, sixteenth, and seventeenth centuries show, even when the Institution was operative in its organization, and long before the speculative element was made its predominating characteristic. Thus these Old Charges tell us, almost all of them in the same words, that Masons "shal be true, each one to other, (that is to say,) to every Mason of the science of Masonrye that are Masons allowed, ye shal doe to them as ye would that they should doe unto you."

2. *The Religious Doctrines* of Freemasonry are very simple and self-evident. They are darkened by no perplexities of sectarian theology, but stand out in the broad light, intelligible and acceptable by all minds, for they ask only for a belief in God and in the immortality of the soul. He who denies these tenets can be no Mason, for the religious doctrines of the Institution significantly impress them in every part of its ritual. The neophyte no sooner crosses the threshold of the Lodge, but he is called upon to recognize, as his first duty, an entire trust in the superintending care and love of the Supreme Being, and the series of initiations into Symbolic Masonry terminate by revealing the awful symbol of a life after death and an entrance upon immortality.

Now this and the former class of doctrines are intimately connected and mutually dependent. For we must first know and feel the universal fatherhood of God before we can rightly appreciate the universal brotherhood of man. Hence the Old Records already alluded to, which show us what was the condition of the Craft in the Middle Ages, exhibit an eminently religious spirit. These ancient Constitutions always begin with a pious invocation to the Trinity, and sometimes to the saints, and they tell us that "the first charge is that a Mason shall be true to God and holy Church, and use no error nor heresy." And the Charges published in 1723, which professes to be a compilation made from those older records, prescribe that a Mason, while left to his particular opinions, must be of that "religion in which all men agree," that is to say, the religion which teaches the existence of God and an eternal life.

3. *The Philosophical Doctrines* of Freemasonry are scarcely less important, although they are less generally understood than either of the preceding classes. The object of these philosophical doctrines is very different from that of either the moral or the religious. For the moral and religious doctrines of the Order are intended to make men virtuous, while its philosophical doctrines are designed to make them zealous Masons. He who knows nothing of the philosophy of Freemasonry will be apt to become in time lukewarm and indifferent, but he who devotes himself to its contemplation will feel an ever-increasing ardor in the study. Now these philosophical doctrines are developed in that symbolism which is the especial characteristic of Masonic teaching, and relate altogether to the lost and recovered word, the search after Divine truth, the manner and time of its discovery, and the reward that awaits the faithful and successful searcher. Such a philosophy far surpasses the abstract quiddities of metaphysicians. It brings us into close relation to the profound thought of the ancient world, and makes us familiar with every subject of mental science that lies within the grasp of the human intellect. So that, in conclusion, we find that the moral, religious, and philosophical doctrines of Freemasonry respectively relate to the social, the eternal, and the intellectual progress of man.

Finally, it must be observed that while the old Operative institution, which was the cradle and forerunner of the Speculative, as we now have it, abundantly taught in its Constitutions the moral and religious doctrines of which we have been treating, it makes no reference to the philosophical doctrines. That our Operative predecessors were well acquainted with the science of symbolism is evident from the architectural ornaments of the buildings which they erected; but they do not seem to have applied its principles to any great extent to the elucidation of their moral and religious teachings; at least, we find nothing said of this symbolic philosophy in the Old Records that are extant. And whether the Operative Masons were reticent on this subject from choice or from ignorance, we may lay it down as an axiom, not easily to be controverted, that the philosophic doctrines of the Order are altogether a development of the system for which we are indebted solely to Speculative Freemasonry.

Spencer Manuscript. A MS. copy of the "Old Charges" of the date of 1726, which belonged to the late Mr. Richard Spencer and was sold in 1875 to Mr. E. T. Carson, of Cincinnati, U. S. A. It was reproduced in Spencer's *Old Constitutions* in 1871.

Spes mea in Deo est. (*My hope is in God.*) The motto of the Thirty-second Degree of the Ancient and Accepted Scottish Rite.

Spire, Congress of. Spire is a city in Bavaria, on the banks of the Rhine, and the seat of a cathedral which was erected in the

eleventh century. A Masonic Congress was convoked there in 1469 by the Grand Lodge of Strasburg, principally to take into consideration the condition of the Fraternity and of the edifices in the course of construction by them, as well as to discuss the rights of the Craft.

Spiritualizing. In the early lectures of the last century, this word was used to express the method of symbolic instruction applied to the implements of Operative Masonry. In a ritual of 1725, it is said: "As we are not all working Masons, we apply the working-tools to our morals, which we call spiritualizing." Thus, too, about the same time, Bunyan wrote his symbolic book which he called *Solomon's Temple Spiritualized*. Phillips, in his *New World of Words*, 1706, thus defines to spiritualize: "to explain a passage of an author in a spiritual manner, to give it a godly or mystical sense."

Spiritual Lodge. Hutchinson (*Sp. of Masonry*, p. 94) says: "We place the spiritual Lodge in the vale of *Jehosophat*, implying thereby, that the principles of Masonry are derived from the knowledge of God, and are established in the *Judgment of the Lord;* the literal translation of the word *Jehosophat*, from the Hebrew tongue, being no other than those express words." This refers to the Lodge, which is thus described in the old lectures at the beginning of the last century, which were in vogue at the time of Hutchinson.

"*Q.* Where does the Lodge stand?

"*A.* Upon the Holy ground, on the highest hill or lowest vale, or in the vale of Jehoshaphat, or any other sacred place."

The spiritual Lodge is the imaginary or Symbolic Lodge, whose form, magnitude, covering, supports, and other attributes are described in the lectures.

Spiritual Temple. The French Masons say: "We erect temples for virtue and dungeons for vice"; thus referring to the great Masonic doctrine of a spiritual temple. There is no symbolism of the Order more sublime than that in which the Speculative Mason is supposed to be engaged in the construction of a spiritual temple, in allusion to that material one which was erected by his operative predecessors at Jerusalem. Indeed, the difference, in this point of view, between Operative and Speculative Masonry is simply this: that while the former was engaged in the construction, on Mount Moriah, of a material temple of stones and cedar, and gold and precious stones, the latter is occupied, from his first to his last initiation, in the construction, the adornment, and the completion of the spiritual temple of his body. The idea of making the temple a symbol of the body is not, it is true, exclusively Masonic. It had occurred to the first teachers of Christianity. Christ himself alluded to it when he said, "Destroy this temple, and in three days I will raise it up"; and St. Paul extends the idea, in the first of his Epistles to the Corinthians, in the following language: "Know ye not that ye are the temple of God, and that the spirit of God dwelleth in you?" (iii. 16.) And again, in a subsequent passage of the same Epistle, he reiterates the idea in a more positive form: "What, know ye not that your body is the temple of the Holy Ghost which is in you, which ye have of God, and ye are not your own?" (vi. 19.)

But the mode of treating this symbolism by a reference to the particular Temple of Solomon, and to the operative art engaged in its construction, is an application of the idea peculiar to Freemasonry. Hitchcock, in his *Essay on Swedenborg*, thinks that the same idea was also shared by the Hermetic philosophers. He says: "With perhaps the majority of readers, the Temple of Solomon, and also the tabernacle, were mere buildings—very magnificent, indeed, but still mere buildings—for the worship of God. But some are struck with many portions of the account of their erection admitting a moral interpretation; and while the buildings are allowed to stand (or to have stood, once,) visible objects, these interpreters are delighted to meet with indications that Moses and Solomon, in building the Temples, were wise in the knowledge of God and of man; from which point it is not difficult to pass on to the moral meaning altogether, and affirm that the building, which was erected without the noise of a 'hammer, nor ax, nor any tool of iron' (1 Kings vi. 7,) was altogether a moral building—a building of God, not made with hands. In short, many see in the story of Solomon's Temple, a symbolical representation of MAN as the temple of God, with its HOLY OF HOLIES deep seated in the centre of the human heart."

Spoulée, John de. He appears to have presided over the Masons of England in 1350, in the reign of Edward III. Anderson says he was called Master of the "Ghiblim." (*Constitutions*, 1738, p. 70.)

Spreading the Ballot. Taking the vote on the application of a candidate for initiation or admission. It is an Americanism, principally used in the Western States. Thus: "The ballot may be *spread* a second time in almost any case if the harmony of the Lodge seems to require it."—*Swigert, G.·. M.·. of Kentucky.* "It is legal to *spread* the ballot the third time, if for the correction of mistakes, not otherwise."—*Rob. Morris.* It is a technicality, and scarcely English.

Sprengseisen, Christian Friedrich Kessler Von. An ardent adherent of Von Hund and admirer of his Templar system, in defense of which, and against the Spiritual Templarism of Starck, he wrote, in 1786, the book, now very rare, entitled *Anti Saint Nicaise*, and other works. He was born at Saalsfield, in 1731, and died January 11, 1809. (See *Saint Nicaise.*)

Sprig of Acacia. See *Acacia.*

Spurious Freemasonry. For this term, and for the theory connected with it, we are indebted to Dr. Oliver, whose speculations

led him to the conclusion that in the earliest ages of the world there were two systems of Freemasonry, the one of which, preserved by the patriarchs and their descendants, he called Primitive or Pure Freemasonry. (See *Primitive Freemasonry.*) The other, which was a schism from this system, he designated as the Spurious Freemasonry of Antiquity. To comprehend this system of Oliver, and to understand his doctrine of the declension of the Spurious from the Primitive Freemasonry, we must remember that there were two races of men descended from the loins of Adam, whose history is as different as their characters were dissimilar. There was the virtuous race of Seth and his descendants, and the wicked one of Cain. Seth and his children, down to Noah, preserved the dogmas and instructions, the legends and symbols, which had been received from their common progenitor, Adam; but Cain and his descendants, whose vices at length brought on the destruction of the earth, either totally forgot or greatly corrupted them. Their Freemasonry was not the same as that of the Sethites. They distorted the truth, and varied the landmarks to suit their own profane purposes. At length the two races became blended together. The descendants of Seth, becoming corrupted by their frequent communications with those of Cain, adopted their manners, and soon lost the principles of the Primitive Freemasonry, which at length were confined to Noah and his three sons, who alone, in the destruction of a wicked world, were thought worthy of receiving mercy.

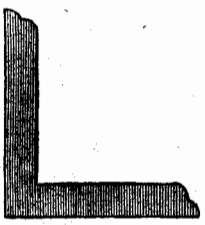
Noah consequently preserved this system, and was the medium of communicating it to the post-diluvian world. Hence, immediately after the deluge, Primitive Freemasonry was the only system extant.

But this happy state of affairs was not to last. Ham, the son of Noah, who had been accursed by his father for his wickedness, had been long familiar with the corruptions of the system of Cain, and with the gradual deviations from truth which, through the influence of evil example, had crept into the system of Seth. After the deluge, he propagated the worst features of both systems among his immediate descendants. Two sets or parties, so to speak, now arose in the world—one which preserved the great truths of religion, and consequently of Masonry, which had been handed down from Adam, Enoch, and Noah—and another which deviated more and more from this pure, original source. On the dispersion at the tower of Babel, the schism became still wider and more irreconcilable. The legends of Primitive Freemasonry were altered, and its symbols perverted to a false worship; the mysteries were dedicated to the worship of false gods and the practise of idolatrous rites, and in the place of the Pure or Primitive Freemasonry which continued to be cultivated among the patriarchal descendants of Noah, was established those mysteries of Paganism to which Dr. Oliver has given the name of the "Spurious Freemasonry."

It is not to Dr. Oliver, nor to any very modern writer, that we are indebted for the idea of a Masonic schism in this early age of the world. The doctrine that Masonry was lost, that is to say, lost in its purity, to the larger portion of mankind, at the tower of Babel, is still preserved in the ritual of Ancient Craft Masonry. And in the degree of Noachites, a degree which is attached to the Scottish Rite, the fact is plainly adverted to as, indeed, the very foundation of the degree. Two races of Masons are there distinctly named, the *Noachites* and the *Hiramites;* the former were the conservators of the Primitive Freemasonry as the descendants of Noah; the latter were the descendants of Hiram, who was himself of the race which had fallen into Spurious Freemasonry, but had reunited himself to the true sect at the building of King Solomon's Temple, as we shall hereafter see. But the inventors of the degree do not seem to have had any very precise notions in relation to this latter part of the history.

The mysteries, which constituted what has been thus called Spurious Freemasonry, were all more or less identical in character. Varying in a few unimportant particulars, attributable to the influence of local causes, their great similarity in all important points showed their derivation from a common origin.

In the first place, they were communicated through a system of initiation, by which the aspirant was gradually prepared for the reception of their final doctrines; the rites were performed at night, and in the most retired situations, in caverns or amid the deep recesses of groves and forests; and the secrets were only communicated to the initiated after the administration of an obligation. Thus, Firmicus (*Astrol.*, lib. vii.) tells us that "when Orpheus explained the ceremonies of his mysteries to candidates, he demanded of them, at the very entrance, an oath, under the solemn sanction of religion, that they would not betray the rites to profane ears." And hence, as Warburton says from Horus Apollo, the Egyptian hieroglyphic for the mysteries was a grasshopper, because that insect was supposed to have no mouth.



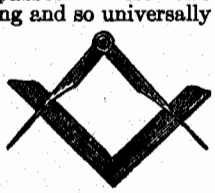
The ceremonies were all of a funereal character. Commencing in representations of a lugubrious description, they celebrated the legend of the death and burial of some mythical being who was the especial object of their love and adoration. But these rites, thus beginning in lamentation, and typical of death, always ended in joy. The object of their sorrow was restored to life and immortality, and the latter part of the ceremonial was descriptive of his resurrection. Hence, the great doctrines of the mysteries were the immortality of the soul and the existence of a God.

Such, then, is the theory on the subject

of what is called "Spurious Freemasonry," as taught by Oliver and the disciples of his school. Primitive Freemasonry consisted of that traditional knowledge and symbolic instruction which had been handed down from Adam, through Enoch, Noah, and the rest of the patriarchs, to the time of Solomon. Spurious Freemasonry consisted of the doctrines and initiations practised at first by the antediluvian descendants of Cain, and, after the dispersion at Babel, by the Pagan priests and philosophers in their "Mysteries."

Spurs. In the Orders of Chivalry, the spurs had a symbolic meaning as important as their practical use was necessary. "To win one's spurs" was a phrase which meant "to win one's right to the dignity of knighthood." Hence, in the investiture of a knight, he was told that the spurs were a symbol of promptitude in military service; and in the degradation of an unfaithful knight, his spurs were hacked off by the cook, to show his utter unworthiness to wear them. Stowe says (*Annals*, 902), in describing the ceremony of investing knights: "Evening prayer being ended, there stood at the chapel-door the king's master-cook, with his white apron and sleeves, and chopping-knife in his hand, gilded about the edge, and challenged their spurs, which they redeemed with a noble a piece; and he said to every knight, as they passed by him: 'Sir Knight, look that you be true and loyal to the king, my master, or else I must hew these spurs from your heels.'" In the Masonic Orders of Chivalry, the symbolism of the spurs has unfortunately been omitted.

Square. This is one of the most important and significant symbols in Freemasonry. As such, it is proper that its true form should be preserved. The French Masons have almost universally given it with one leg longer than the other, thus making it a carpenter's square. The American Masons, following the incorrect delineations of Jeremy L. Cross, have, while generally preserving the equality of length in the legs, unnecessarily marked its surface with inches; thus making it an instrument for measuring length and breadth, which it is not. It is simply the *trying square* of a stone-mason, and has a plain surface; the sides or legs embracing an angle of ninety degrees, and is intended only to test the accuracy of the sides of a stone, and to see that its edges subtend the same angle.



In Freemasonry, it is a symbol of morality. This is its general signification, and is applied in various ways: 1. It presents itself to the neophyte as one of the three great lights; 2. To the Fellow-Craft as one of his working-tools; 3. To the Master Mason as the official emblem of the Master of the Lodge. Everywhere, however, it inculcates the same lesson of morality, of truthfulness, of honesty. So universally accepted is this symbolism, that it has gone outside of the Order, and has been found in colloquial language communicating the same idea. Square, says Halliwell (*Dict. Archaisms*), means honest, equitable, as in "square dealing." To *play upon the square* is proverbial for *to play honestly*. In this sense the word is found in the old writers.

As a Masonic symbol, it is of very ancient date, and was familiar to the Operative Masons. In the year 1830, the architect, in rebuilding a very ancient bridge called Baal Bridge, near Limerick, in Ireland, found under the foundation-stone an old brass square, much eaten away, containing on its two surfaces the following inscription: I. WILL. STRIUE. TO. LIUE.—WITH. LOUE. & CARE.—UPON. THE. LEUL.—BY. THE. SQUARE., and the date 1517. The modern Speculative Mason will recognize the idea of *living on the level and by the square*. This discovery proves, if proof were necessary, that the familiar idea was borrowed from our Operative brethren of former days.

The square, as a symbol in Speculative Masonry, has therefore presented itself from the very beginning of the revival period. In the very earliest catechism of the last century, of the date of 1725, we find the answer to the question, "How many make a Lodge?" is "God and the Square, with five or seven right or perfect Masons." God and the Square, religion and morality, must be present in every Lodge as governing principles. Signs at that early period were to be made by squares, and the furniture of the Lodge was declared to be the Bible, Compasses, and Square.

In all rites and in all languages where Masonry has penetrated, the square has preserved its primitive signification as a symbol of morality.

Square and Compasses. These two symbols have been so long and so universally combined—to teach us, as says an early ritual, "to square our actions and to keep them within due bounds," they are so seldom seen apart, but are so kept together, either as two great lights, or as a jewel worn once by the Master of the Lodge, now by the Past Master—that they have come at last to be recognized as the proper badge of a Master Mason, just as the triple tau is of a Royal Arch Mason or the passion cross of a Knights Templar.

So universally has this symbol been recognized, even by the profane world, as the peculiar characteristic of Freemasonry, that it has recently been made in the United States the subject of a legal decision. A manufacturer of flour having made, in 1873, an application to the Patent Office for permission to adopt the square and compasses

as a trade-mark, the Commissioner of Patents refused the permission on the ground that the mark was a Masonic symbol.

"If this emblem," said Mr. J. M. Thacher, the Commissioner, "were something other than precisely what it is—either less known, less significant, or fully and universally understood—all this might readily be admitted. But, considering its peculiar character and relation to the public, an anomalous question is presented. There can be no doubt that this device, so commonly worn and employed by Masons, has an established mystic significance, universally recognized as existing; whether comprehended by all or not, is not material to this issue. In view of the magnitude and extent of the Masonic organization, it is impossible to divest its symbols, or at least this particular symbol —perhaps the best known of all—of its ordinary signification, wherever displayed, either as an arbitrary character or otherwise. It will be universally understood, or misunderstood, as having a Masonic significance; and, therefore, as a trade-mark, must constantly work deception. Nothing could be more mischievous than to create as a monopoly, and uphold by the power of law, anything so calculated, as applied to purposes of trade, to be misinterpreted, to mislead all classes, and to constantly foster suggestions of mystery in affairs of business."

In a religious work by John Davies, entitled *Summa Totalis*, or *All in All and the Same Forever*, printed in 1607, we find an allusion to the square and compasses by a profane in a really Masonic sense. The author, who proposes to describe mystically the form of the Deity, says in his dedication:

"Yet I this forme of formelesse DEITY,
Drewe by the Squire and Compasse of our Creed."

In Masonic symbolism the Square and Compasses refer to the Mason's duty to the Craft and to himself; hence it is properly a symbol of brotherhood, and there significantly adopted as the badge or token of the Fraternity.

Berage, in his work on the high degrees (*Les plus secrets Mystères des Hauts Grades*), gives a new interpretation to the symbol. He says: "The square and the compasses represent the union of the Old and New Testaments. None of the high degrees recognize this interpretation, although their symbolism of the two implements differs somewhat from that of symbolic Masonry. The square is with them peculiarly appropriated to the lower degrees, as founded on the operative art; while the compasses, as an implement of higher character and uses, is attributed to the degrees, which claim to have a more elevated and philosophical foundation. Thus they speak of the initiate, when he passes from the blue Lodge to the Lodge of Perfection, as 'passing from the square to the compasses,' to indicate a progressive elevation in his studies. Yet even in the high degrees, the square and compasses combined retain their primitive signification as a symbol of brotherhood and as a badge of the Order."

Squaremen. The companies of wrights, slaters, etc., in Scotland, in the seventeenth century, were called "Squaremen." They had ceremonies of initiation, and a word, sign, and grip, like the Masons. Lyon (*Hist. of the L. at Edinb.*, p. 23) says: "The 'Squaremen Word' was given in conclaves of journeymen and apprentices, wrights, slaters, etc., in a ceremony in which the aspirant was blindfolded and otherwise 'prepared'; he was sworn to secrecy, had word, grip, and sign communicated to him, and was afterward invested with a leather apron. The entrance to the apartment, usually a public house, in which the 'brithering' was performed, was guarded, and all who passed had to give the grip. The fees were spent in the entertainment of the brethren present. Like the Masons, the Squaremen admitted non-operatives." In the St. Clair charter of 1628, among the representatives of the Masonic Lodges, we find the signature of "George Liddell, deakin of squarmen and nov quartermaistir." (*Ibid.*, p. 62.) This would show that there must have been an intimate connection between the two societies or crafts.

Squin de Flexian. A recreant Templar, to whom, with Noffodei and, as some say, another unknown person, is attributed the invention of the false accusations upon which were based the persecutions and the downfall of the Order of Knights Templar. He was a native of the city of Béziers, in the south of France, and having been received as a Knights Templar, had made so much proficiency in the Order as to have been appointed to the head of the Priory of Montfaucon. Reghellini states that both Squin de Flexian and Noffodei were Templars, and held the rank of Commanders; but Dupuy (*Condemnation des Templiers*) denies that the latter was a Templar. He says: "All historians agree that the origin of the ruin of the Templars was the work of the Prior of Montfaucon and of Noffodei, a Florentine, banished from his country, and whom nobody believes to have been a Templar. This Prior, by the sentence of the Grand Master, had been condemned, for heresy and for having led an infamous life, to pass the remainder of his days in a prison. The other is reported to have been condemned to rigorous penalties by the provost of Paris."

Reghellini's account (*La Maçonnerie considerée, etc.*, i., p. 451) is more circumstantial. He says: "In 1506, two Knights Templar, Noffodei and Florian, were punished for crimes, and lost their Commanderies, that of the latter being Montfaucon. They petitioned the Provincial Grand Master of Mount Carmel for a restoration to their offices, but met with a refusal. They then obtained an entrance into the Provincial

Grand Master's country-house, near Milan, and having assassinated him, concealed the body in the woods under some thick shrubbery; after which they fled to Paris. There they obtained access to the king, and thus furnished Philip with an occasion for executing his projects, by denouncing the Order and exposing to him the immense wealth which it possessed.

"They proposed the abolition of the Order, and promised the king, for a reward, to be its denouncers. The king accepted their proposition, and, assuring them of his protection, pointed out to them the course which they were to pursue.

"They associated with themselves a third individual, called by historians 'the Unknown' (*l'Inconnu*); and Noffodei and Florian sent a memorial to Enguerand de Marigni, Superintendent of the Finances, in which they proposed, if he would guarantee them against the attacks of the Order of Templars, and grant them civil existence and rights, to discover to the king secrets which they deemed of more value than the conquest of an empire.

"As a sequel to this first declaration, they addressed to the king an accusation, which was the same as he had himself dictated to them for the purpose of the turn which he desired to the affair. This accusation contained the following charges:

"1. That the Order of Templars was the foe of all kings and all sovereign authority; that it communicated secrets to its initiates under horrible oaths, with the criminal condition of the penalty of death if they divulged them; and that the secret practices of their initiations were the consequences of irreligion, atheism, and rebellion.

"2. That the Order had betrayed the religion of Christ, by communicating to the Sultan of Babylon all the plans and operations of the Emperor Frederick the Second, whereby the designs of the Crusaders for the recovery of the Holy Land were frustrated.

"3. That the Order prostituted the mysteries most venerated by Christians, by making a Knight, when he was received, trample upon the Cross, the sign of redemption; and abjured the Christian religion by making the neophyte declare that the true God had never died, and never could die; that they carried about them and worshipped a little idol called *Bafomet;* and that after his initiation the neophyte was compelled to undergo certain obscene practices.

"4. That when a Knight was received, the Order bound him by an oath to a complete and blind obedience to the Grand Master, which was a proof of rebellion against the legitimate authority.

"5. That Good Friday was the day selected for the grand orgies of the Order.

"6. That they were guilty of unnatural crimes.

"7. That they burned the children of their concubines, so as to destroy all traces of their debauchery."

These calumnies formed the basis of the longer catalogue of accusations, afterward presented by the Pope, upon which the Templars were finally tried and condemned.

In the preliminary examinations of the accused, Squin de Flexian took an active part as one of the Commissioners. In the pleadings for their defense presented by the Knights, they declare that "Knights were tortured by Flexian de Beziers, prior of Montfaucon, and by the monk, William Robert, and that already thirty-six had died of the tortures inflicted at Paris, and several others in other places."

Of the ultimate fate of these traitors nothing is really known. When the infamous work which they had inaugurated had been consummated by the king and the Pope, as their services were no longer needed, they sank into merited oblivion. The author of the *Secret Societies of the Middle Ages* (p. 268) says: "Squin was afterwards hanged, and Noffodei beheaded, as was said, with little probability, by the Templars."

Hardly had the Templars, in their prostrate condition, the power, even if they had the will, to inflict such punishment. It was not Squin, but Marigni, his abettor, who was hanged at Montfaucon, by order of Louis X., the successor of Philip, two years after his persecution of the Templars. The revenge they took was of a symbolic character. In the change of the legend of the Third Degree into that of the Templar system, when the martyred James de Molay was substituted for Hiram Abif, the three assassins were represented by Squin de Flexian, Noffodei, and the Unknown. As there is really no reference in the historical records of the persecution to this third accuser, it is most probable that he is altogether a mythical personage, invented merely to complete the triad of assassins, and to preserve the congruity of the Templar with the Masonic legend.

The name of Squin de Flexian, as well as that of Noffodei, have been differently spelled by various writers, to say nothing of the incomprehensible error found in some of the oldest French Cahiers of the Kadosh, such as that of De la Hogue, where the two traitors are named Gerard Tabé and Benoit Mehui. The *Processus contra Templarios* calls him *Esquius de Flexian de Biteriis;* and Raynouard always names him *Squin de Florian,* in which he is blindly followed by Reghellini, Ragon, and Thory. But the weight of authority is in favor of *Squin de Flexian,* which appears to be the true name of this Judas of the Templars.

Srutl. ("Revelation.") A collective name of those Sanskrit writings supposed by the Hindus to have been revealed by a deity, and applied at first only to the Vedic Mantras and Brahmanas, but afterward extended to the older Upánishads.

Staff. A white staff is the proper insignia of a Treasurer. In the order of Procession for laying a foundation-stone as given by Preston (*Illustrations*, ed. 1792, p. 111), we find "Grand Treasurer with his staff." In America the use of the staff by the Treasurer of a Lodge has been discontinued. It was derived from the old custom for the Treasurer of the king's household to carry a staff as the ensign of authority. In the old "Customary Books" we are told that the Steward or Treasurer of the household—for the offices were formerly identical—received the office from the king himself by the presentation of a staff in these words: *Tennez le baston de nostre maison*, "Receive the staff of our house." Hence the Grand Lodge of England decreed, June 24, 1741, that "in the procession in the hall" the Grand Treasurer should appear "with the staff." (*Constitutions*, 1756, p. 236.)

Stairs, Winding. See *Winding Stairs.*

St. Alban's Regulations. The regulations said to have been made by St. Alban for the government of the Craft are referred to by Anderson, in his second edition (p. 57), and afterward by Preston. (See *St. Alban.*)

Standard. An ensign in war, being that under which the soldiers stand or to which they rally in the fight. It is sometimes used in the higher degrees, in connection with the word *Bearer*, to denote a particular officer. But the term mostly used to indicate any one of the ensigns of the different degrees of Masonry is *Banner*.

The Grand Standard of the Order of Knights Templar in the United States is described in the regulations as being "of white woollen or silk stuff, six feet in height and five feet in width, made tripartite at the bottom, fastened at the top to the cross-bar by nine rings; in the centre of the field a blood-red passion cross, over which the motto, *In hoc signo vinces*, and under, *Non Nobis, Domine! non Nobis sed Nomini tuo da Gloriam!* The cross to be four feet high, and the upright and bar to be seven inches wide. On the top of the staff a gilded globe or ball four inches in diameter, surmounted by the patriarchal cross, twelve inches in height. The cross to be crimson, edged with gold."

The standard of the Order in the Ancient and Accepted Scottish Rite is thus described in the *Fundamental Statutes*. It is white with a gold fringe, bearing in the center a black double-headed eagle with wings displayed; the beaks and thighs are of gold; it holds in one talon the golden hilt and in the other the silver blade of an antique sword, placed horizontally from right to left; to the sword is suspended the Latin device, in letters of gold, *Deus meumque Jus*. The eagle is crowned with a triangle of gold, and holds a purple band fringed with gold and strewn with golden stars.

There is really no standard of the Order properly belonging to Symbolic or Royal Arch Masonry. Many Grand Chapters, however, and some Grand Lodges in this country, have adopted for a standard the blazonment of the arms of Masonry first made by Dermott for the Atholl Grand Lodge of Masons. In the present condition of the ritual, occasioned by the disseverance of the Royal Arch Degree from the Master's, and its organization as a distinct system, this standard, if adopted at all, would be most appropriate to the Grand Chapters, since its charges consist of symbols no longer referred to in the ritual of Symbolic Masonry.

Standard-Bearer. An officer in a Commandery of Knights Templar, whose duty it is to carry and protect the standard of the Order. A similar officer exists in several of the high degrees.

Stand to and Abide by. The covenant of Masonry requires every Mason "to stand to and abide by" the laws and regulations of the Order, whether expressed in the edicts of the Grand Lodge, the by-laws of his Lodge, or the landmarks of the Institution. The terms are not precisely synonymous, although generally considered to be so. *To stand to* has a somewhat active meaning, and signifies to maintain and defend the laws; while *to abide by* is more passive in meaning, and signifies to submit to the award made by such laws.

St. Anthony. An order taking its rise from the life and habits of St. Anthony, the hermit, who died about 357. His disciples, called Anchorites, near Ethiopia, lived in austerity and solitariness in the desert, until John, Emperor of Ethiopia, in 370, created them a religious order of knighthood, and bestowed privileges upon them under the title of St. Anthony, who was made patron of the empire. They established monasteries, adopted a black habit, and wore a blue cross in the shape of a Tau.

The vow embraced chastity, defense of the Christian faith, to guard the empire, obey their superiors, and go to war when and wheresoever commanded. Marriage required a license. There were two classes—combatants and non-combatants—the second class being composed of those too old for military duty. Yet ere they retired they were required to serve three years against Arabian pirates, three against the Turks, and three against the Moors.

The ancient monastery is in the deserts of Thebais, surrounded by an oval wall 500 paces in circumference and 40 feet in height. It is entered by ropes let down from the watch-house, the crane being turned by monks. By age, the cells, which

are four by five by seven feet, have been reduced from 300 to 40. Advantage had been taken of one of nature's curiosities in obtaining abundant water from a riven rock, which is reached through a subterraneous passage of 50 paces, extending beyond the walls. In France, Italy, and Spain there are ecclesiastical and military organizations styled Knights of St. Anthony, who wear a plain cross, the principals a double cross. The chief seat is at Vienna. In the abbey rest the remains of St. Anthony.

Star. In the French and Scottish Rites lighted candles or torches are called stars when used in some of the ceremonies, especially in the reception of distinguished visitors, where the number of lights or stars with which the visitor is received is proportioned to his rank; but the number is always odd, being 3, 5, 7, 9, or 11.

Star, Blazing. See *Blazing Star*.

Star, Eastern. See *Eastern Star, Order of the*.

Star, Five-Pointed. See *Five-Pointed Star*.

Star in the East. The Blazing Star is thus called by those who entertain the theory that there is "an intimate and necessary connection between Masonry and Christianity." This doctrine, which Dr. Oliver thinks is "the fairest gem that Masonry can boast," is defended by him in his early work entitled *The Star in the East*. The whole subject is discussed in the article *Blazing Star*, which see.

Star of Jerusalem. A degree cited in the nomenclature of Fustier.

Star of the Syrian Knights. (*Etoile des Chevaliers Syriens.*) The Order of Syrian Knights of the Star is contained in the collection of Pyron. It is divided into three degrees—Novice, Professed, and Grand Patriarch.

Starck, Johann August von. Von Starck, whose life is closely connected with the history of German Freemasonry, and especially with that of the Rite of Strict Observance, was born at Schwerin, October 29, 1741. He studied at the University of Göttingen, and was made in 1761 a Freemason in a French Military Lodge. In 1763 he went to St. Petersburg, where he received the appointment of teacher in one of the public schools. There, too, it is supposed that he was adopted into the Rite of Melesino, then flourishing in the Russian capital, and became first acquainted with the Rite of Strict Observance, in which he afterward played so important a part. After two years' residence at St. Petersburg, he went for a short time to England, and was in August, 1766, in Paris. In 1767 he was director of the schools at Wismar, where he was Junior Warden of the Lodge of the Three Lions. In 1770 he was called to Königsberg, to occupy the chair of theology, and to fill the post of court chaplain. The following year he resigned both offices, and retired to Mettau, to devote himself to literary and philosophical pursuits. But in 1781 the Court at Darmstadt conferred upon him the posts of chief preacher and the first place in the consistory, and there he remained until his death, which occurred March 3, 1816.

The knowledge that Starck acquired of the Rite of Strict Observance convinced him of its innate weakness, and of the necessity of some reformation. He therefore was led to the idea of reviving the spiritual branch of the Order, a project which he sought to carry into effect, at first quietly and secretly, by gaining over influential Masons to his views. In this he so far succeeded as to be enabled to establish, in 1767, the new system of elerical Knights Templar, as a schism from the Strict Observance, and to which he gave the name of Clerks of Relaxed Observance. It consisted of seven degrees, as follows: 1. Apprentice; 2. Fellow; 3. Master; 4. Young Scottish Master; 5. Old Scottish Master, or Knight of St. Andrew; 6. Provincial Chapter of the Red Cross; 7. Magus, or Knight of Brightness and Light; which last degree was divided into five classes, of Novice, Levite, and Priest—the summit of the Order being Knight Priest. Thus he embodied the idea that Templarism was a hierarchy, and that not only was every Mason a Templar, but every true Templar was both a Knight and a Priest. Starck, who was originally a Protestant, had been secretly connected with Romanism while in Paris; and he attempted surreptitiously to introduce Roman Catholicism into his new system. He professed that the Rite which he was propagating was in possession of secrets not known to the chivalric branch of the Order; and he demanded, as a prerequisite to admission, that the candidate should be a Roman Catholic, and have previously received the degrees of Strict Observance.

Starck entered into a correspondence with Von Hund, the head of the Rite of Strict Observance, for the purpose of effecting a fusion of the two branches—the chivalric and the spiritual. But, notwithstanding the willingness of Von Hund to accept any league which promised to give renewed strength to his own decaying system, the fusion was never effected. It is true that in 1768 there was a formal union of the two branches at Wismar, but it was neither sincere nor permanent. At the Congress of Brunswick, in 1775, the clerical branch seceded and formed an independent Order; and, after the death of Von Hund, the Lodges of the Strict Observance abandoned their name, and called themselves the United German Lodges. The spiritual branch, too, soon began to lose favor with the German Freemasons, partly because the Swedish system was getting to be popular in Germany, and partly because Starck was suspected of being in league with the Catholics, for whose sake he had invented his system. Documentary evidence has since proved that this suspicion was well founded. Ragon says that the Order continued in successful existence until the year 1800; but I doubt if it lasted so long.

The German writers have not hesitated to accuse Starck of having been an emissary of the Jesuits, and of having instituted his Rite in the interests of Jesuitism. This, of course, rendered both him and the Rite unpopular, and gave an impetus to its decay and fall. Starck himself, even before his appointment as court chaplain at Darmstadt, in 1781, had, by his own confession, not only abandoned the Rite, but all interest in Freemasonry. In 1785 he wrote his *Saint Nicaise*, which was really anti-Masonic in principle, and in 1787 he published his work *Ueber Kripto-Catholicesmus, etc.*, or *A Treatise on Secret Catholicism, on Proselyte Making, on Jesuitism, and on Secret Societies*, which was a controversial work directed against Nicolai, Gädicke, and Biester. In this book he says: "It is true that in my youthful days I was a Freemason. It is also true that when the so-called Strict Observance was introduced into Masonry I belonged to it, and was, like others, an Eques, Socius, Armiger, Commendator, Prefect, and Sub-Prior; and, having taken some formal cloister-like profession, I have been a Clericus. But I have withdrawn from all that, and all that is called Freemasonry, for more than nine years."

While an active member of the Masonic Order, whatever may have been his secret motives, he wrote many valuable Masonic works, which produced at the time of their appearance a great sensation in Germany. Such were his *Apology for the Order of Freemasonry*, Berlin, 1778, which went through many editions; *On the Design of the Order of Freemasonry*, Berlin, 1781; and *On the Ancient and Modern Mysteries*, 1782. He was distinguished as a man of letters and as a learned theologian, and has left numerous works on general literature and on religion, the latter class showing an evident leaning toward the Roman Catholic faith, of which he was evidently a partisan. "There is," says Feller (*Biog. Univ.*), "in the life of Starck something singular, that has never been made public." I think the verdict is now well established, that in his labors for the apparent reformation of Freemasonry there was a deplorable want of honesty and sincerity, and that he abandoned the Order finally because his schemes of ambition failed, and the Jesuitical designs with which he entered it were frustrated.

Stare Super Vias Antiquas. (*To stand on the old paths.*) A Latin adage, appropriately applied as a Masonic motto to inculcate the duty of adhering to the ancient landmarks.

State. The political divisions of the United States are called States and Territories. In every State and in every populous Territory there is a Grand Lodge and a Grand Chapter, each of which exercises exclusive jurisdiction over all the Lodges and Chapters within its political boundaries; nor does it permit the introduction of any other Grand Lodge or Grand Chapter within its limits; so that there is, and can be, but one Grand Lodge and one Grand Chapter in each State. In most of the States there are also a Grand Council of Royal and Select Masters, and a Grand Commandery of Knights Templar, which claim the same right of exclusive jurisdiction. (See *Jurisdiction of a Grand Lodge.*)

Stations. The positions occupied by the subordinate officers of a Lodge are called *places*, as "the Junior Deacon's place in the Lodge." But the positions occupied by the Master and Wardens are called *stations*, as "the Senior Warden's station in the Lodge." This is because these three officers, representing the sun in his three prominent points of rising, culminating, and setting, are supposed to be stationary, and therefore remain in the spot appropriated to them by the ritual, while the Deacon and other officers are required to move about from place to place in the Lodge.

Statistics of Freemasonry. The assertion that "in every land a Mason may find a home, and in every clime a brother," is well sustained by the statistics of the Order, which show that, wherever civilized men have left their footprints, its temples have been established. It is impossible to venture on anything more than a mere approximation to the number of Freemasons scattered over the world. The following is a table of the countries in which Freemasonry is openly practised with the permission of the public authorities, omitting the States, now, by the increasing spirit of tolerance, very few, indeed, where the suspicions of the government compel the Masons, if they meet at all, to meet in private:

I. Europe.

Anhalt-Bernburg,
Anhalt-Dessau,
Bavaria,
Belgium,
Bremen,
Brunswick,
Denmark,
England,
France,
Germany,
Greece,
Hamburg,
Hanover,
Hesse-Darmstadt,
Holland,
Holstein-Oldenburg,
Hungary,
Ionian Islands,
Ireland,
Italy,
Malta,
Mecklenburg-Schwerin,
Netherlands.
Norway,
Portugal,
Posen, Duchy of,
Prussia,
Prussian Poland,
Saxe,
Saxe-Coburg,
Saxe-Gotha,
Saxe-Hildburghausen,
Saxe-Meiningen,
Saxe-Weimar,
Saxony,
Schwarzburg-Rudolstadt,
Scotland,
Spain,
Sweden,
Switzerland,
Wurtemberg.

II. Asia.

Ceylon,
China,
India,
Japan,
Persia,
Pondicherry,
Turkey.

III. Oceanica.

Java,
New South Wales,
New Zealand,
Sumatra,
Sandwich Islands.

IV. Africa.

Algeria,
Bourbon, Isle of,
Canary Islands,
Cape of Good Hope,
Egypt,
Goa,
Guinea,
Mauritius,
Mozambique,
Senegambia,
St. Helena.

V. America.

Antigua,
Argentine Republic,
Barbadoes,
Bermudas,
Brazil,
Canada,
Carthagena,
Chili,
Colombia,
Curaçoa,
Dominica,
Dutch Guiana,
English Guiana,
French Guiana,
Guadeloupe,

Statute of Henry VI. See *Laborers, Statutes of.*

Statutes. The permanent rules by which a subordinate Lodge is governed are called its *By-Laws;* the regulations of a Grand Lodge are called its *Constitution:* but the laws enacted for the government of a Supreme Council of the Scottish Rite are denominated *Statutes.*

St. Clair Charters. In the Advocates' Library, of Edinburgh, is a manuscript entitled "Hay's Memoirs," which is, says Lawrie, "a collection of several things relating to the historical account of the most famed families of Scotland. Done by Richard Augustine Hay, Canon Regular of Sainte Genevefs of Paris, Prior of Sainte Pierremont, etc., *Anno Domini* 1700." Among this collection are two manuscripts, supposed to have been copied from the originals by Canon Hay, and which are known to Masonic scholars as the "St. Clair Charters." These copies, which it seems were alone known in the last century, were first published by Lawrie, in his *History of Freemasonry*, where they constitute Appendices I. and II. But it appears that the originals have since been discovered, and they have been republished by Bro. W. J. Hughan, in his *Unpublished Records of the Craft*, with the following introductory account of them by Bro. D. Murray Lyon:

"These MSS. were several years ago accidentally discovered by David Lang, Esq., of the Signet Library, who gave them to the late Bro. Aytoun, Professor of Belles-Lettres in the University of Edinburgh, in exchange for some antique documents he had. The Professor presented them to the Grand Lodge of Scotland, in whose repositories they now are. There can be no doubt of their identity as originals. We have compared several of the signatures with autographs in other MSS. of the time. The charters are in scrolls of paper, —the one 15 by 11½ inches, the other 26 by 11½ inches,—and for their better preservation have been affixed to cloth. The caligraphy is beautiful; and though the edges of the paper have been frayed, and holes worn in one or two places where the sheets had been folded, there is no difficulty in supplying the few words that have been obliterated, and making out the whole of the text. About three inches in depth at the bottom of No. 1, in the right-hand corner, is entirely wanting, which may have contained some signatures in addition to those given. The left hand bottom corner of No. 2 has been similarly torn away, and the same remark with regard to signatures may apply to it. The first document is a letter of jurisdiction, granted by the Freemen Masons of Scotland to William St. Clair of Roslin, (probable date 1600–1). The second purports to have been granted by the Freemen Masons and Hammermen of Scotland to Sir William St. Clair of Roslin, (probable date May 1, 1628)." Facsimiles and transcripts of these MSS. are given by D. M. Lyon in his *History of the Lodge of Edinburgh.*

However difficult it may be to decide as to the precise date of these charters, there are no Masonic manuscripts whose claim to authenticity is more indisputable; for the statements which they contain tally not only with the uniformly accepted traditions of Scotch Masonry, but with the written records of the Grand Lodge of Scotland, both of which show the intimate connection that existed between the Freemasonry of that kingdom and the once powerful but now extinct family of St. Clair.

St. Clair, William. The St. Clairs of Roslin, or, as it is often spelled, of Rosslyn, held for more than three hundred years an intimate connection with the history of Masonry in Scotland. William St. Clair, Earl of Orkney and Caithness, was, in 1441, appointed by King James II. the Patron and Protector of the Masons of Scotland, and the office was made hereditary in his family. Charles Mackie says of him (*Lond. Freem.*, May, 1851, p. 166) that "he was considered one of the best and greatest Masons of the age." He planned the construction of a most magnificent collegiate church at his palace of Roslin, of which, however, only the chancel and part of the transept were completed. To take part in this design, he invited the most skilful Masons from foreign countries; and in order that they might be conveniently lodged and carry on the work with ease and despatch, he ordered them to erect the neighboring town of Roslin, and gave to each of the most worthy a house and lands. After his death, which occurred about 1480, the office of hereditary Patron was transmitted to his descendants, who, says Lawrie (*Hist.*, p. 100), "held their principal annual meetings at Kilwinning."

The prerogative of nominating the office-bearers of the Craft, which had always been exercised by the kings of Scotland, appears to have been neglected by James VI. after his accession to the throne of England. Hence the Masons, finding themselves embarrassed for want of a Protector, about the year 1600 (if that be the real date of the first of the St. Clair Manuscripts), appointed William St. Clair of Roslin, for himself and his heirs, their "patrons and judges." After presiding over the Order for many years, says Lawrie, William St. Clair went to Ireland, and in 1630 a second Charter was issued, granting to his son, Sir William St. Clair, the same power with which his father had been invested. This Charter having been signed by the Masters and Wardens of the principal Lodges of Scotland, Sir William St. Clair assumed the active administration of the affairs of the Craft, and appointed his Deputies and Wardens, as had been customary with his ancestors. For more than a century after this renewal of the compact between the Lairds of Roslin and the Masons of Scotland, the Craft continued to flourish under the successive heads of the family.

But in the year 1736, William St. Clair, Esq., to whom the Hereditary Protectorship had descended in due course of succession, having no children of his own, became anxious that the office of Grand Master should not become vacant at his death. Accordingly, he assembled the members of the Lodges of Edinburgh and its vicinity, and represented to them the good effects that would accrue to them if they should in future have at their head a Grand Master of their own choice, and declared his intention to resign into the hands of the Craft his hereditary right to the office. It was agreed by the assembly that all the Lodges of Scotland should be summoned to appear by themselves, or proxies, on the approaching St. Andrew's Day, at Edinburgh, to take the necessary steps for the election of a Grand Master.

In compliance with the call, the representatives of thirty-two Lodges met at Edinburgh on the 30th of November, 1736, when William St. Clair tendered the following resignation of his hereditary office:

"I, William St. Clair, of Roslin, Esq., taking into my consideration that the Masons in Scotland did, by several deeds, constitute and appoint William and Sir William St. Clairs of Roslin, my ancestors and their heirs, to be their patrons, protectors, judges, or masters, and that my holding or claiming any such jurisdiction, right, or privilege might be prejudicial to the Craft and vocation of Masonry, whereof I am a member; and I, being desirous to advance and promote the good and utility of the said Craft of Masonry to the utmost of my power, do therefore hereby, for me and my heirs, renounce, quit, claim, overgive, and discharge all right, claim, or pretence that I, or my heirs, had, have, or any ways may have, pretend to, or claim to be, patron, protector, judge, or master of the Masons in Scotland, in virtue of any deed or deeds made and granted by the said Masons, or of any grant or charter made by any of the kings of Scotland to and in favor of the said William and Sir William St. Clairs of Roslin, my predecessors, or any other manner or way whatsoever, for now and ever; and I bind and oblige me and my heirs to warrand this present renunciation and discharge at all hands. And I consent to the registration hereof in the books of council and session, or any other judges' books competent, therein to remain for preservation." And then follows the usual formal and technical termination of a deed. (Lawrie's *Hist. of F. M.*, p. 148.)

The deed of resignation having been accepted, the Grand Lodge proceeded to the election of its office-bearers, when William St. Clair, as was to be expected, was unanimously chosen as Grand Master; an office which, however, he held but for one year, being succeeded in 1737 by the Earl of Cromarty. He lived, however, for more than half a century afterward, and died in January, 1778, in the seventy-eighth year of his age.

The Grand Lodge of Scotland was not unmindful of his services to the Craft, and on the announcement of his death a funeral Lodge was convened, when four hundred brethren, dressed in deep mourning, being present, Sir William Forbes, who was then the Grand Master, delivered an impressive address, in the course of which he paid the following tribute to the character of St. Clair. After alluding to his voluntary resignation of his high office for the good of the Order, he added: "His zeal, however, to promote the welfare of our society was not confined to this single instance; for he continued almost to the very close of life, on all occasions where his influence or his example could prevail, to ex-

tend the spirit of Masonry and to increase the number of the brethren. . . . To these more conspicuous and public parts of his character I am happy to be able to add, that he possessed in an eminent degree the virtues of a benevolent and good heart—virtues which ought ever to be the distinguishing marks of a true brother." (*Ibid.*, p. 224.)

Bro. Charles Mackie, in the London *Freemasons' Quarterly Review* (1831, p. 167), thus describes the last days of this venerable patron of the Order: "William St. Clair of Roslin, the last of that noble family, was one of the most remarkable personages of his time; although stripped of his paternal title and possessions, he walked abroad respected and reverenced. He moved in the first society; and if he did not carry the purse, he was stamped with the impress of nobility. He did not require a cubit to be added to his stature, for he was considered the stateliest man of his age."

[The preceding account of the connection of the St. Clairs with Scotch Freemasonry is based almost entirely on Lawrie's *History of Freemasonry* (1804), but a later and more critical writer—D. Murray Lyon, in his *History of the Lodge of Edinburgh* (1873)—considers the statement that James II. invested the Earl of Orkney and Caithness with the dignity of Grand Master and subsequently made the office hereditary to be "altogether apocryphal" (p. 3). The real fact appears to be that the Operative Masons of Scotland by the St. Clair Charters did confer upon the St. Clair family the office of Patron and Protector of the Craft, and that William St. Clair was made a Mason in 1735 in order to resign this office, and in return for such apparent magnanimity to be elected in 1736 the first Grand Master of Scotland.—E. L. H.]

Steinbach, Erwin von. See *Erwin von Steinbach.*

Steinmetz. German. A stone-mason. For an account of the German fraternity of Steinmetzen, see *Stone-Masons of the Middle Ages.*

"Stellato Sedet Solo." ("He sits on his starry throne.") A symbolic expression in the Twenty-eighth Degree of the A. A. Scottish Rite.

Step. The *step* can hardly be called a mode of recognition, although Apuleius informs us that there was a peculiar step in the Osiriac initiation which was deemed a sign. It is in Freemasonry rather an esoteric usage of the ritual. The *steps* can be traced back as far as to at least the middle of the last century, in the rituals of which they are fully described. The custom of advancing in a peculiar manner and form, to some sacred place or elevated personage, has been preserved in the customs of all countries, especially among the Orientalists, who resort even to prostrations of the body when approaching the throne of the sovereign or the holy part of a religious edifice. The steps of Masonry are symbolic of respect and veneration for the altar, whence Masonic light is to emanate.

In former times, and in some of the high degrees, a bier or coffin was placed in front of the altar, as a well-known symbol, and in passing over this to reach the altar, those various positions of the feet were necessarily taken which constitute the proper mode of advancing. Respect was thus necessarily paid to the memory of a worthy artist as well as to the holy altar. Lenning says of the steps—which the German Masons call *die Schritte der Aufzunehmenden*, the steps of the recipients, and the French, *les pas Mystèrieux*, the mysterious steps—that "every degree has a different number, which are made in a different way, and have an allegorical meaning." Of the "allegorical meaning" of those in the Third Degree, I have spoken above as explicitly as would be proper. Gädicke says: "The three grand steps symbolically lead from this life to the source of all knowledge."

It must be evident to every Master Mason, without further explanation, that the three steps are taken from the place of darkness to the place of light, either figuratively or really over a coffin, the symbol of death, to teach symbolically that the passage from the darkness and ignorance of this life is through death to the light and knowledge of the eternal life. And this, from the earliest times, was the true symbolism of the step.

Steps on the Master's Carpet. The three steps delineated on the Master's carpet, as one of the symbols of the Third Degree, refer to the three steps or stages of human life—youth, manhood, and old age. This symbol is one of the simplest forms or modifications of the mystical ladder, which pervades all the systems of initiation ancient and modern. (See *Carpet.*)

Sterkin. One of the three Assassins, according to the Hiramic legend of some of the high degrees. Lenning says the word means *vengeance*, but does not state his authority. STR are the letters of the Chaldaic verb *to strike a blow*, and it may be that the root of the name will be there found; but the Masonic corruptions of Hebrew words often defy the rules of etymology. Perhaps this and some kindred words are mere anagrams, or corruptions introduced into the high degrees by the adherents of the Pretender, who sought in this way to do honor to the friends of the house of Stuart, or to cast infamy on its enemies. (See *Romvel.*)

Stewards. Officers in a Symbolic Lodge, whose duties are, to assist in the collection of dues and subscriptions; to provide the necessary refreshments, and make a regular report to the Treasurer; and generally to aid the Deacons and other officers in the performance of their duties. They usually carry white rods, and the jewel of their office is a cornucopia, which is a symbol of plenty.

Stewards, Grand. See *Grand Stewards.*

Stewards' Lodge. See *Grand Stewards' Lodge.*

Stirling. A city in Scotland which was the seat of a Lodge called the "Stirling Ancient Lodge," which the author of the introduction to the *General Regulations of the Supreme Grand Chapter of Scotland* says conferred the degrees of Royal Arch, Red Cross or Ark, the Sepulcher, Knight of Malta, and Knights Templar until about the beginning of the last century, when two Lodges were formed—one for the cultivation of St. John's Masonry, which was the old one, and a new one called the "Royal Arch," for the high-degrees; although it, too, soon began to confer the first three degrees. The "Ancient Lodge" joined the Grand Lodge of Scotland at its formation in 1736, but the new Lodge remained independent until 1759.

The same authority tells us that "in the Stirling Ancient Lodge are still preserved two old, rudely-engraved brass plates: one of these relates to the first two degrees of Masonry; the other contains on the one side certain emblems belonging to a Master's Lodge, and on the reverse five figures; the one at the top is called the 'Redd Cross or Ark.' At the bottom is a series of concentric arches, which might be mistaken for a rainbow, were there not a keystone on the summit, indicative of an arch. The three other figures are enclosed within a border; the upper is called the 'Sepulcher'; the second, 'Knight of Malta'; and the third, 'Knights Templar.' The age of these plates is unknown, but they can scarcely be more modern than the beginning or middle of the seventeenth century."

So circumstantial a description, inserted, too, in a book of official authority, would naturally lead to the conclusion that these plates must have been in existence in 1845, when the description was written. If they ever existed, they have now disappeared, nor have any traces of them been discovered. Bro. W. James Hughan, whose indefatigable labors have been rewarded with so many valuable discoveries, has failed, in this search, to find success. He says (*Lond. Freemason*), "I spent some weeks, in odd hours, looking up the question a few years ago, and wrote officials in Edinburgh and at Stirling, and also made special inquiries at Stirling by kind co-operation of Masonic students who also investigated the matter; but all our many attempts only resulted in confirming what I was told at the outset, viz., that 'No one knows aught about them, either in Stirling or elsewhere. The friends at Stirling say the plates were sent to Edinburgh, and *never* returned, and the Fraternity at Edinburgh declared they *were* returned, and have since been lost.'"

St. Leger. See *Aldworth*.

Stockings. In the last century, when knee-breeches constituted a portion of the costume of gentlemen, Masons were required, by a ritual regulation, to wear white stockings. The fashion having expired, the regulation is no longer in force.

Stolkin. In the *elu* degrees this is the name of one of those appointed to search for the criminals commemorated in the legend of the Third Degree. It is impossible to trace its derivation to any Hebrew root. It may be an anagram of a name, perhaps that of one of the friends of the house of Stuart.

Stone. The stone, on account of its hardness, has been from the most ancient times a symbol of strength, fortitude, and a firm foundation. The Hebrew word אבן, EBEN, which signifies a stone, is derived, by Gesenius, from an obsolete root, ABAN, to build, whence *aban*, an architect; and he refers it to AMANAH, which means a column, a covenant, and truth. The stone, therefore, says Portal (*Symb. des Egypt.*), may be considered as the symbol of faith and truth: whence Christ taught the very principle of symbology, when he called Peter, who represented *faith*, the rock or stone on which he would build his Church. But in Hebrew as well as in Egyptian symbology the stone was also sometimes the symbol of *falsehood*. Thus the name of Typhon, the principle of evil in the Egyptian theogony, was always written in the hieroglyphic characters with the determinative sign for a stone. But the stone of Typhon was a *hewn stone*, which had the same evil signification in Hebrew. Hence Jehovah says in Exodus, "Thou shalt not build me an altar of hewn stone"; and Joshua built, in Mount Ebal, "an altar of *whole stones*, over which no man hath lift up any iron." The *hewn stone* was therefore a symbol of evil and falsehood; the *unhewn stone* of good and truth. This must satisfy us that the Masonic symbolism of the stone, which is the converse of this, has not been derived from either the Hebrew or the Egyptian symbology, but sprang from the architectural ideas of the Operative Masons; for in Masonry the *rough ashlar*, or *unhewn stone*, is the symbol of man's evil and corrupt condition; while the *perfect ashlar*, or the *hewn stone*, is the symbol of his improved and perfected nature.

Stone, Corner. See *Corner-Stone*.

Stone, Cubical. See *Cubical Stone*.

Stone Manuscript. This Manuscript is no longer in existence, having been one of those which was destroyed, in 1720, by some too scrupulous brethren. Preston (ed. 1792, p. 167) describes it as "an old manuscript, which was destroyed with many others in 1720, said to have been in the possession of Nicholas Stone, a curious sculptor under Inigo Jones." Preston gives, however, an extract from it, which details the affection borne by St. Alban for the Masons, the wages he gave them, and the charter which he obtained from the king to hold a general assembly. (See *St. Alban*.) Anderson (*Constitutions*, 1738, p. 99), who calls Stone the Warden of Inigo Jones, intimates that he wrote the Manuscript, and gives it as authority for a statement that in 1607 Jones held the Quarterly Communications. The extract made by Preston, and the brief reference by Anderson, are all that is left of the Stone Manuscript.

Stone-Masons of the Middle Ages. The history of the origin and progress of the

GRAND LODGE OF ENGLAND

GRAND MAITRE
By P. Lambert de Liste M.r of the Lodge N.o 53
London 17[illegible] According to Act of Parliament

Brotherhood of Stone-Masons in Europe, during the Middle Ages, is of great importance, as a study, to the Masonic scholar, because of the intimate connection that existed between that Brotherhood and the Fraternity of Freemasons. Indeed, the history of the one is but the introduction to the history of the other. In an historical excursus, we are compelled to take up the speculative science where we find it left by the operative art. Hence, whoever shall undertake to write a history of Freemasonry, must give, for the completion of his labor, a very full consideration to the Brotherhood of Stone-Masons.

In the year 1820, there issued from the press of Leipsic, in Germany, a work, by Dr. Christian Ludwig Steiglitz, under the title of *Von Alldeutscher Baukunst*, that is, "An Essay on the Old German Architecture," published in 1820. In this work the author traces, with great exactness, the rise and the progress of the fraternities of Stone-Masons from the earliest times, through the Middle Ages, until their final absorption into the associations of Freemasons. From the labors of Dr. Steiglitz, collated with some other authorities in respect to matters upon which he is either silent or erroneous, I have compiled the following sketch.

It is universally admitted that, in the early ages of Christianity, the clergy were the most important patrons of the arts and sciences. This was because all learning was then almost exclusively confined to ecclesiastics. Very few of the laity could read or write, and even kings affixed the sign of the cross, in the place of their signatures, to the charters and other documents which they issued, because, as they frankly confessed, of their inability to write their names; and hence comes the modern expression of *signing* a paper, as equivalent to subscribing the name.

From the time of Charlemagne, in the eighth century, to the middle of the twelfth, all knowledge and practise of architecture, painting, and sculpture were exclusively confined to the monks; and bishops personally superintended the erection of the churches and cathedrals in their dioceses, because not only the principles, but the practise of the art of building were secrets scrupulously maintained within the walls of cloisters, and utterly unknown to laymen.*

Many of the founders of the Monastic Orders, and especially among these St. Benedict, made it a peculiar duty for the brethren to devote themselves to architecture and church building. The English monk Winfrid, better known in ecclesiastical history as St. Boniface, and who, for his labors in Christianizing that country, has been styled the Apostle of Germany, followed the example of his predecessors in the erection of German monasteries. In the eighth century he organized an especial class of monks for the practise of building, under the name of *Operarii*, or Craftsmen, and *Magistri Operum*, or Masters of the Works. The labors and duties of these monks were divided. Some of them designed the plan of the building; others were painters and sculptors; others were occupied in working in gold and silver and embroidery; and others again, who were called *Cæmentarii*, or Stone-Masons, undertook the practical labors of construction. Sometimes, especially in extensive buildings, where many workmen were required, laymen were also employed, under the direction of the monks. So extensive did these labors become, that bishops and abbots often derived a large portion of their revenues from the earnings of the workmen in the monasteries.

Among the laymen who were employed in the monasteries as assistants and laborers, many were of course possessed of superior intelligence. The constant and intimate association of these with the monks in the prosecution of the same design led to this result, that in process of time, gradually and almost unconsciously, the monks imparted to them their art secrets and the esoteric principles of architecture. Then, by degrees, the knowledge of the arts and sciences went from these monkish builders out into the world, and the laymen architects, withdrawing from the ecclesiastical fraternities, organized brotherhoods of their own. Such was the beginning of the Stone-Masons in Germany, and the same thing occurred in other countries. These brotherhoods of Masons now began to be called upon, as the monks formerly had been, when an important building, and especially a church or a cathedral, was to be erected. Eventually they entirely superseded their monkish teachers in the prosecution of the art of building about the beginning of the twelfth century. To their knowledge of architecture they added that of the other sciences, which they had learned from the monks. Like these, too, they devoted themselves to the higher principles of the art, and employed other laymen to assist their labors as stone-masons. And thus the union of these architects and stone-masons presented, in the midst of an uneducated people, a more elevated and intelligent class, engaged as an exclusive association in building important and especially religious edifices.

But now a new classification took place. As formerly, the monks, who were the sole depositaries of the secrets of high art, separated themselves from the laymen, who were entrusted with only the manual labor of building; so now the more intelligent of the laymen, who had received these secrets from the monks, were distinguished as architects from the ordinary laborers, or common masons. The latter knew only the use of the trowel and mortar, while the former were occupied in devising plans for building and the construction of ornaments by sculpture and skilful stone-cutting.

These brotherhoods of high artists soon won

* This view was long held, but is by no means correct, for we now know that there were many scholarly architects during this period of supposed darkness. [E. E. C.]

great esteem, and many privileges and franchises were conceded to them by the municipal authorities among whom they practised their profession. Their places of assembly were called *Hutten, Logen*, or *Lodges*, and the members took the name of *Steinmetzen*. Their patron saint was St. John the Baptist, who was honored by them as the mediator between the Old and the New Covenants, and the first martyr of the Christian religion. To what condition of art these Freemasons of the Middle Ages had attained, we may judge from what Hallam says of the edifices they erected —that they "united sublimity in general composition with the beauties of variety and form, skilful or at least fortunate effects of shadow and light, and in some instances extraordinary mechanical science." (*Mid. Ages*, iv., 280.) And he subsequently adds, as an involuntary confirmation of the truth of the sketch of their origin just given, that the mechanical execution of the buildings was "so far beyond the apparent intellectual powers of those times, that some have ascribed the principal ecclesiastical structures to the Fraternity of Freemasons, depositaries of a concealed and traditionary science. There is probably some ground for this opinion, and the earlier archives of that mysterious association, if they existed, might illustrate the progress of Gothic architecture, and perhaps reveal its origin." (*Ib.*, 284.) These archives do exist, or many of them; and although unknown to Mr. Hallam, because they were out of the course of his usual reading, they have been thoroughly sifted by recent Masonic scholars, especially by our German and English brethren; and that which the historian of the Middle Ages had only assumed as a plausible conjecture has, by their researches, been proved to be a fact.

The prevalence of Gnostic symbols—such as lions, serpents, and the like—in the decorations of churches of the Middle Ages, have led some writers to conclude that the Knights Templar exercised an influence over the architects, and that by them the Gnostic and Ophite symbols were introduced into Europe. But Dr. Steiglitz denies the correctness of this conclusion. He ascribes the existence of Gnostic symbols in the church architecture to the fact that, at an early period in ecclesiastical history, many of the Gnostic dogmas passed over into Christendom with the Oriental and Platonic philosophy, and he attributes their adoption in architecture to the natural compliance of the architects or Masons with the predominant taste in the earlier periods of the Middle Ages for mysticism, and the favor given to grotesque decorations, which were admired without any knowledge of their actual import.

Steiglitz also denies any deduction of the Builders' Fraternities, or Masonic Lodges, of the Middle Ages from the Mysteries of the old Indians, Egyptians, and Greeks; although he acknowledges that there is a resemblance between the organizations. This, however, he attributes to the fact that the Indians and Egyptians preserved all the sciences, as well as the principles of architecture, among their secrets, and because, among the Greeks, the artists were initiated into their mysteries, so that, in the old as well as in the new brotherhoods, there was a purer knowledge of religious truth, which elevated them as distinct associations above the people. In like manner, he denies the descent of the Masonic fraternities from the sect of Pythagoreans, which they resembled only in this: that the Samian sage established schools which were secret, and were based upon the principles of geometry.

But he thinks that those are not mistaken who trace the associations of Masons of the Middle Ages to the Roman Colleges, the *Collegia Cœmentariorum*, because these colleges appear in every country that was conquered and established as a province or a colony by the Romans, where they erected temples and other public buildings, and promoted the civilization of the inhabitants. They continued until a late period. But when Rome began to be convulsed by the wars of its decline, and by the incursions of hordes of barbarians, they found a welcome reception at Byzantium, or Constantinople, whence they subsequently spread into the west of Europe, and were everywhere held in great estimation for their skill in the construction of buildings.

In Italy the associations of architects never entirely ceased, as we may conclude from the many buildings erected there during the domination of the Ostrogoths and the Longobards. Subsequently, when civil order was restored, the Masons of Italy were encouraged and supported by popes, princes, and nobles. And Muratori tells us, in his *Historia d'Italia*, that under the Lombard kings the inhabitants of Como were so superior as masons and bricklayers, that the appellation of Magistri Comacini, or Masters from Como, became generic to all those of the profession. (See *Comacine Masters*.)

In England, when the Romans took possession of it, the corporations, or colleges of builders, also appeared, who were subsequently continued in the Fraternity of Freemasons, probably established, as Steiglitz thinks, about the middle of the fifth century, after the Romans had left the island. The English Masons were subjected to many adverse difficulties, from the repeated incursions of Scots, Picts, Danes, and Saxons, which impeded their active labors; yet were they enabled to maintain their existence, until, in the year 926, they held that General Assembly at the city of York which framed the Constitutions that governed the English Craft for eight hundred years, and which is claimed to be the oldest Masonic record now extant. It is but fair to say that the recent researches of Bro. Hughan and other English writers have thrown a doubt upon the authenticity of these Constitutions, and that the very existence of this York assembly has been denied and practically confirmed.

In France, as in Germany, the Fraternities

of Architects originally sprang out of the connection of lay builders with the monks in the era of Charlemagne. The French Masons continued their fraternities throughout the Middle Ages, and erected many cathedrals and public buildings.

We have now arrived at the middle of the eleventh century, tracing the progress of the fraternities of Stone-Masons from the time of Charlemagne to that period. At that time all the architecture of Europe was in their hands. Under the distinctive name of *Traveling Freemasons* they passed from nation to nation, constructing churches and cathedrals wherever they were needed. Of their organization and customs, Sir Christopher Wren, in his *Parentalia*, gives the following account:

"Their government was regular, and where they fixed near the building in hand, they made a camp of huts. A surveyor governed in chief; every tenth man was called a warden, and overlooked each nine."

Mr. Hope, who, from his peculiar course of studies, was better acquainted than Mr. Hallam with the history of these Traveling Freemasons, thus speaks, in his *Essay on Architecture*, of their organization at this time, by which they effected an identity of architectural science throughout all Europe:

"The architects of all the sacred edifices of the Latin Church, wherever such arose,—north, south, east, or west—thus derived their science from the same central school; obeyed in their designs the dictates of the same hierarchy; were directed in their constructions by the same principles of propriety and taste; kept up with each other, in the most distant parts to which they might be sent, the most constant correspondence; and rendered every minute improvement the property of the whole body, and a new conquest of the art."

Working in this way, the Stone-Masons, as corporations of builders, daily increased in numbers and in power. In the thirteenth century they assumed a new organization, which allied them more closely than ever with that Brotherhood of Speculative Freemasons into which they were finally merged in the eighteenth century, in England, but not in Germany, France, or Italy.

These fraternities or associations became at once very popular. Many of the potentates of Europe, and among them the Emperor Rudolph I., conceded to them considerable powers of jurisdiction, such as would enable them to preserve the most rigid system in matters pertaining to building, and would facilitate them in bringing master builders and stone-masons together at any required point. Pope Nicholas III. granted the Brotherhood, in 1278, letters of indulgence, which were renewed by his successors, and finally, in the next century, by Pope Benedict XII.

The Steinmetzen, as a fraternity of Operative Masons, distinguished from the ordinary masons and laborers of the craft, acquired at this time great prominence, and were firmly established as an association. In 1452 a general assembly was convened at Strasburg, and a new constitution framed, which embraced many improvements and modifications of the former one. But seven years afterward, in 1459,* Jost Dotzinger, then holding the position of architect of the Cathedral of Strasburg, and, by virtue of his office, presiding over the Craft of Germany, convened a general assembly of the Masters of all the Lodges at the city of Ratisbon. There the code of laws which had been adopted at Strasburg in 1452, under the title of "Statutes and Regulations of the Fraternity of Stone-Masons of Strasburg," was fully discussed and sanctioned. It was then also resolved that there should be established four Grand Lodges—at Strasburg, at Vienna, at Cologne, and at Zurich; and they also determined that the master workman, for the time being, of the Cathedral of Strasburg should be the Grand Master of the Masons of Germany. These constitutions or statutes are still extant, and are older than any other existing Masonic record of undoubted authenticity, except the manuscript of Halliwell. They were "kindly and affably agreed upon," according to their preamble, "for the benefit and requirements of the Masters and Fellows of the whole Craft of Masonry and Masons in Germany."

General assemblies, at which important business was transacted, were held in 1464 at Ratisbon, and in 1469 at Spire, while provincial assemblies in each of the Grand Lodge jurisdictions were annually convened.

In consequence of a deficiency of employment, from political disturbances and other causes, the Fraternity now for a brief period declined in its activity. But it was speedily revived when, in October, 1498, the Emperor Maximilian I. confirmed its statutes, as they had been adopted at Strasburg, and recognized its former rights and privileges. This act of confirmation was renewed by the succeeding emperors, Charles V. and Ferdinand I. In 1563 a general assembly of the Masons of Germany and Switzerland was convened at the city of Basle by the Grand Lodge of Strasburg. The Strasburg constitutions were again renewed with amendments, and what was called the Stone-Masons' Law (*das Steinwerkrecht*) was established. The Grand Lodge of Strasburg continued to be recognized as possessing supreme appellate jurisdiction in all matters relating to the Craft. Even the Senate of that city had acknowledged its prerogatives, and had conceded to it the privilege of settling all controversies in relation to matters connected with building; a concession which was, however, revoked in 1620, on the charge that the privilege had been misused.

Thus the Operative Freemasons of Germany continued to work and to cultivate the high principles of a religious architectural art. But on March 16, 1707, up to which time

*Besides the Strasburg Constitution of 1459 there are two other very important documents of the Steinmetzen of Germany: The Torgau Ordinances of 1462 and the Brothers' Book of 1563. [E. E. C.]

the Fraternity had uninterruptedly existed, a decree of the Imperial Diet at Ratisbon dissolved the connection of the Lodges of Germany with the Grand Lodge of Strasburg, because that city had passed into the power of the French. The head being now lost, the subordinate bodies began rapidly to decline. In several of the German cities the Lodges undertook to assume the name and exercise the functions of Grand Lodges; but these were all abolished by an imperial edict in 1731, which at the same time forbade the administration of any oath of secrecy, and transferred to the government alone the adjudication of all disputes among the Craft. From this time we lose sight of any national organization of the Freemasons in Germany until the restoration of the Order, in the eighteenth century, through the English Fraternity.* But in many cities—as in Basle, Zurich, Hamburg, Dantzic, and Strasburg—they preserved an independent existence under the statutes of 1559, although they lost much of the profound symbolical knowledge of architecture which had been possessed by their predecessors.

Before leaving these German Stone-Masons, it is worth while to say something of the symbolism which they preserved in their secret teachings. They made much use, in their architectural plans, of mystical numbers, and among these five, seven, and nine were especially prominent. Among colors, gold and blue and white possessed symbolic meanings. The foot rule, the compasses, the square, and the gavel, with some other implements of their art, were consecrated with a spiritual signification. The east was considered as a sacred point; and many allusions were made to Solomon's Temple, especially to the pillars of the porch, representations of which are to be found in several of the cathedrals.

In France the history of the Free Stone-Masons was similar to that of their German brethren. Originating, like them, from the cloisters, and from the employment of laymen by the monkish architects, they associated themselves together as a brotherhood superior to the ordinary stone-masons. The connection between the Masons of France and the Roman Colleges of Builders was more intimate and direct than that of the Germans, because of the early and very general occupation of Gaul by the Roman legions: but the French organization did not materially differ from the German. Protected by popes and princes, the Masons were engaged, under ecclesiastical patronage, in the construction of religious edifices. In France there was also a peculiar association, the *Pontifices*, or *Bridge Builders*, closely connected in design and character with the Masonic Fraternity, and the memory of which is still preserved in the name of one of the degrees of the Scottish Rite, that of "Grand Pontiff." The principal seat of the French Stone-Masonry was in Lombardy, whence the Lodges were disseminated over the kingdom, a fact which is thus accounted for by Mr. Hope: "Among the arts exercised and improved in Lombardy," he says, "that of building held a pre-eminent rank, and was the more important because the want of those ancient edifices to which they might recur for materials already wrought, and which Rome afforded in such abundance, made the architects of these more remote regions dependent on their own skill and free to follow their own conceptions." But in the beginning of the sixteenth century, the necessity for their employment in the further construction of religious edifices having ceased, the Fraternity began to decline, and the Masonic corporations were all finally dissolved, with those of other workmen, by Francis I., in 1539. Then originated that system which the French call *Compagnonage*, a system of independent gilds or brotherhoods, retaining a principle of community as to the art which they practised, and with, to some extent, a secret bond, but without elevated notions or general systematic organizations. The societies of *Compagnons* were, indeed, but the *débris* of the Building Masons. Masonry ceased to exist in France as a recognized system until its revival in the eighteenth century.

We see, then, in conclusion, that the Stone-Masons—coming partly from the Roman Colleges of Architects, as in England, in Italy, and in France, but principally, as in Germany, from the cloistered brotherhoods of monks—devoted themselves to the construction of religious edifices. They consisted mainly of architects and skilful operatives; but—as they were controlled by the highest principles of their art, were in possession of important professional secrets, were actuated by deep sentiments of religious devotion, and had united with themselves in their labors men of learning, wealth, and influence—to serve as a proud distinction between themselves and the ordinary laborers and uneducated workmen, many of whom were of servile condition.

Subsequently, in the beginning of the eighteenth century, they threw off the operative element of their institution, and, adopting an entirely speculative character, they became the Freemasons of the present day, and established on an imperishable foundation that sublime Institution which presents over all the habitable earth the most wonderful system of religious and moral symbolism that the world ever saw.

Stone, Nicholas. See *Stone Manuscript*.

Stone of Foundation. The Stone of Foundation constitutes one of the most important and abstruse of all the symbols of Freemasonry. It is referred to in numerous legends and traditions not only of the Freemasons, but also of the Jewish Rabbis, the Talmudic writers, and even the Mussulman doctors. Many of these, it must be confessed, are apparently puerile and absurd; but most

*Thus we see that the great order of the Steinmetzen of Germany took no part in the formation of the Speculative Freemasons.

[E. E. C.]

of them, and especially the Masonic ones, are deeply interesting in their allegorical signification.

The Stone of Foundation is, properly speaking, a symbol of the higher degrees. It makes its first appearance in the Royal Arch, and forms indeed the most important symbol of that degree. But it is so intimately connected, in its legendary history, with the construction of the Solomonic Temple, that it must be considered as a part of Ancient Craft Masonry, although he who confines the range of his investigations to the first three degrees will have no means, within that narrow limit, of properly appreciating the symbolism of the Stone of Foundation.

As preliminary to the inquiry, it is necessary to distinguish the Stone of Foundation, both in its symbolism and its legendary history, from other stones which play an important part in the Masonic ritual, but which are entirely distinct from it. Such are the *corner-stone*, which was always placed in the north-east corner of the building about to be erected, and to which such a beautiful reference is made in the ceremonies of the First Degree; or the *keystone*, which constitutes an interesting part of the Mark Master's Degree; or, lastly, the *cape-stone*, upon which all the ritual of the Most Excellent Master's Degree is founded. There are all, in their proper places, highly interesting and instructive symbols, but have no connection whatever with the Stone of Foundation, whose symbolism it is our present object to discuss. Nor, although the Stone of Foundation is said, for peculiar reasons, to have been of a cubical form, must it be confounded with that stone called by the continental Masons the *cubical stone*—the *pierre cubique* of the French and the *cubik stein* of the German Masons but which in the English system is known as the *perfect ashlar*.

The Stone of Foundation has a legendary history and a symbolic signification which are peculiar to itself, and which differ from the history and meaning which belong to these other stones. I propose first to define this Masonic Stone of Foundation, then to collate the legends which refer to it, and afterward to investigate its significance as a symbol. To the Mason who takes a pleasure in the study of the mysteries of his Institution, the investigation cannot fail to be interesting, if it is conducted with any ability.

But in the very beginning, as a necessary preliminary to any investigation of this kind, it must be distinctly understood that all that is said of this Stone of Foundation in Masonry is to be strictly taken in a mythical or allegorical sense. Dr. Oliver, while undoubtedly himself knowing that it was simply a symbol, has written loosely of it as though it were a substantial reality; and hence, if the passages in his *Historical Landmarks*, and in his other works which refer to this celebrated stone, are accepted by his readers in a literal sense, they will present absurdities and puerilities which would not occur if the Stone of Foundation was received, as it really is, as a myth conveying a most profound and beautiful symbolism. It is as such that it is to be treated here; and, therefore, if a legend is recited or a tradition related, the reader is requested on every occasion to suppose that such legend or tradition is not intended as the recital or relation of what is deemed a fact in Masonic history, but to wait with patience for the development of the symbolism which it conveys. Read in this spirit, as all the legends of Masonry should be read, the legend of the Stone of Foundation becomes one of the most important and interesting of all the Masonic symbols.

The Stone of Foundation is supposed, by the theory which establishes it, to have been a stone placed at one time within the foundations of the Temple of Solomon, and afterward, during the building of the second Temple, transported to the Holy of Holies. It was in form a perfect cube, and had inscribed upon its upper face, within a delta or triangle, the sacred Tetragrammaton, or ineffable name of God. Oliver, speaking with the solemnity of an historian, says that Solomon thought that he had rendered the house of God worthy, so far as human adornment could effect, for the dwelling of God, "when he had placed the celebrated Stone of Foundation, on which the sacred name was mystically engraven, with solemn ceremonies, in that sacred depository on Mount Moriah, along with the foundations of Dan and Asher, the centre of the Most Holy Place, where the ark was overshadowed by the shekinah of God." The Hebrew Talmudists, who thought as much of this stone, and had as many legends concerning it, as the Masonic Talmudists, called it *eben shatijah*, or "Stone of Foundation," because, as they said, it had been laid by Jehovah as the foundation of the world, and hence the apocryphal Book of Enoch speaks of the "stone which supports the corners of the earth."

This idea of a foundation-stone of the world was most probably derived from that magnificent passage of the Book of Job (ch. xxxviii. v. 4–7) in which the Almighty demands of Job,

"Where wast thou, when I laid the foundation
of the earth?
Declare, since thou hast such knowledge!
Who fixed its dimensions, since thou knowest!
Or who stretched out the line upon it?
Upon what were its foundations fixed?
And who laid its corner-stone,
When the morning stars sang together,
And all the sons of God shouted for joy?"

Noyes, whose translation I have adopted as not materially differing from the common version, but far more poetical and more in the strain of the original, thus explains the allusions to the foundation-stone: "It was the custom to celebrate the laying of the corner-stone of an important building with music, songs, shouting, etc. Hence the morning stars are represented as celebrating the laying of the corner-stone of the earth."

Upon this meager statement has been accumulated more traditions than appertain to any other Masonic symbol. The Rabbis, as

has already been intimated, divide the glory of these apocryphal histories with the Masons; indeed, there is good reason for a suspicion that nearly all the Masonic legends owe their first existence to the imaginative genius of the writers of the Jewish Talmud. But there is this difference between the Hebrew and the Masonic traditions: that the Talmudic scholar recited them as truthful histories, and swallowed, in one gulp of faith, all their impossibilities and anachronisms; while the Masonic scholar has received them as allegories, whose value is not in the facts, but in the sentiments which they convey.

With this understanding of their meaning, let us proceed to a collation of these legends.

In that blasphemous work, the *Toldoth Jeshu*, or *Life of Jesus*, written, it is supposed, in the thirteenth or fourteenth century, we find the following account of this wonderful stone:

"At that time [the time of Jesus] there was in the House of the Sanctuary [that is, the Temple] a stone of foundation, which is the very stone that our father Jacob anointed with oil, as it is described in the twenty-eighth chapter of the Book of Genesis. On that stone the letters of the Tetragrammaton were inscribed, and whosoever of the Israelites should learn that name would be able to master the world. To prevent, therefore, any one from learning these letters, two iron dogs were placed upon two columns in front of the Sanctuary. If any person, having acquired the knowledge of these letters, desired to depart from the Sanctuary, the barking of the dogs, by magical power, inspired so much fear that he suddenly forgot what he had acquired."

This passage is cited by the learned Buxtorf in his *Lexicon Talmudicum;* but in my copy of the *Toldoth Jeshu*, I find another passage, which gives some additional particulars, in the following words:

"At that time there was in the Temple the ineffable name of God, inscribed upon the Stone of Foundation. For when King David was digging the foundation for the Temple, he found in the depths of the excavation a certain stone on which the name of God was inscribed. This stone he removed and deposited it in the Holy of Holies."

The same puerile story of the barking dogs is repeated still more at length. It is not pertinent to the present inquiry, but it may be stated, as a mere matter of curious information, that this scandalous book, which is throughout a blasphemous defamation of our Savior, proceeds to say, that he cunningly obtained a knowledge of the Tetragrammaton from the Stone of Foundation, and by its mystical influence was enabled to perform his miracles.

The Masonic legends of the Stone of Foundation, based on these and other rabbinical reveries, are of the most extraordinary character, if they are to be viewed as histories, but readily reconcilable with sound sense, if looked at only in the light of allegories. They present an uninterrupted succession of events, in which the Stone of Foundation takes a prominent part, from Adam to Solomon, and from Solomon to Zerubbabel.

Thus, the first of these legends, in order of time, relates that the Stone of Foundation was possessed by Adam while in the Garden of Eden; that he used it as an altar, and so reverenced it that, on his expulsion from Paradise, he carried it with him into the world in which he and his descendants were afterward to earn their bread by the sweat of their brow.

Another legend informs us that from Adam the Stone of Foundation descended to Seth. From Seth it passed by regular succession to Noah, who took it with him into the ark, and after the subsidence of the deluge made on it his first thank-offering. Noah left it on Mount Ararat, where it was subsequently found by Abraham, who removed it, and constantly used it as an altar of sacrifice. His grandson Jacob took it with him when he fled to his uncle Laban in Mesopotamia, and used it as a pillow when, in the vicinity of Luz, he had his celebrated vision.

Here there is a sudden interruption in the legendary history of the stone, and we have no means of conjecturing how it passed from the possession of Jacob into that of Solomon. Moses, it is true, is said to have taken it with him out of Egypt at the time of the exodus, and thus it may have finally reached Jerusalem. Dr. Adam Clarke repeats, what he very properly calls "a foolish tradition," that the stone on which Jacob rested his head was afterward brought to Jerusalem, thence carried after a long lapse of time to Spain, from Spain to Ireland, and from Ireland to Scotland, where it was used as a seat on which the kings of Scotland sat to be crowned. Edward I., we know, brought a stone to which this legend is attached from Scotland to Westminster Abbey, where, under the name of Jacob's Pillow, it still remains, and is always placed under the chair upon which the British sovereign sits to be crowned; because there is an old distich which declares that wherever this stone is found the Scottish kings shall reign.

But this Scottish tradition would take the Stone of Foundation away from all its Masonic connections, and therefore it is rejected as a Masonic legend.

The legends just related are in many respects contradictory and unsatisfactory, and another series, equally as old, is now very generally adopted by Masonic scholars as much better suited to the symbolism by which all these legends are explained.

This series of legends commences with the patriarch Enoch, who is supposed to have been the first consecrator of the Stone of Foundation. The legend of Enoch is so interesting and important in this connection as to excuse its repetition in the present work.

The legend in full is as follows: Enoch, under the inspiration of the Most High, and in obedience to the instructions which he had received in a vision, built a temple underground on Mount Moriah, and dedicated it to God. His son, Methuselah, constructed the

building, although he was not acquainted with his father's motives for the erection. This temple consisted of nine vaults, situated perpendicularly beneath each other, and communicating by apertures left in each vault.

Enoch then caused a triangular plate of gold to be made, each side of which was a cubit long; he enriched it with the most precious stones, and encrusted the plate upon a stone of agate of the same form. On the plate he engraved the true name of God, or the Tetragrammaton, and placing it on a cubical stone, known thereafter as the Stone of Foundation, he deposited the whole within the lowest arch.

When this subterranean building was completed, he made a door of stone, and attaching to it a ring of iron, by which it might be occasionally raised, he placed it over the opening of the uppermost arch, and so covered it that the aperture could not be discovered. Enoch, himself, was permitted to enter it but once a year; and on the deaths of Enoch, Methuselah, and Lamech, and the destruction of the world by the deluge, all knowledge of the vault or subterranean temple and of the Stone of Foundation, with the sacred and ineffable name inscribed upon it, was lost for ages to the world.

At the building of the first Temple of Jerusalem, the Stone of Foundation again makes its appearance. Reference has already been made to the Jewish tradition that David, when digging the foundations of the Temple, found in the excavation which he was making a certain stone, on which the ineffable name of God was inscribed, and which stone he is said to have removed and deposited in the Holy of Holies. That King David laid the foundations of the Temple upon which the superstructure was subsequently erected by Solomon, is a favorite theory of the legend-mongers of the Talmud.

The Masonic tradition is substantially the same as the Jewish, but it substitutes Solomon for David, thereby giving a greater air of probability to the narrative, and it supposes that the stone thus discovered by Solomon was the identical one that had been deposited in his secret vault by Enoch. This Stone of Foundation, the tradition states, was subsequently removed by King Solomon and, for wise purposes, deposited in a secret and safer place.

In this the Masonic tradition again agrees with the Jewish, for we find in the third chapter of the *Treatise on the Temple*, the following narrative:

"There was a stone in the Holy of Holies, on its west side, on which was placed the ark of the covenant, and before the pot of manna and Aaron's rod. But when Solomon had built the Temple, and foresaw that it was at some future time to be destroyed, he constructed a deep and winding vault under ground, for the purpose of concealing the ark, wherein Josiah afterwards, as we learn in the Second Book of Chronicles, xxxv. 3, deposited it with the pot of manna, the rod of Aaron, and the oil of anointing."

The Talmudical book *Yoma* gives the same tradition, and says that "the ark of the covenant was placed in the centre of the Holy of Holies, upon a stone rising three fingers' breadth above the floor, to be as it were a pedestal for it." This stone, says Prideaux, in his *Old and New Testament Connected* (vol. i., p. 148), "the Rabbins call the Stone of Foundation, and give us a great deal of trash about it."

There is much controversy as to the question of the existence of any ark in the second Temple. Some of the Jewish writers assert that a new one was made; others that the old one was found where it had been concealed by Solomon; and others again contend that there was no ark at all in the temple of Zerubbabel, but that its place was supplied by the Stone of Foundation on which it had originally rested.

Royal Arch Masons well know how all these traditions are sought to be reconciled by the Masonic legend, in which the substitute ark and the Stone of Foundation play so important a part.

In the Thirteenth Degree of the Ancient and Accepted Rite, the Stone of Foundation is conspicuous as the resting-place of the sacred delta.

In the Royal Arch and Select Master's degrees of the American Rite, the Stone of Foundation constitutes the most important part of the ritual. In both of these it is the receptacle of the ark, on which the ineffable name is inscribed.

Lee, in his *Temple of Solomon*, has devoted a chapter to this Stone of Foundation, and thus recapitulates the Talmudic and Rabbinical traditions on the subject:

"Vain and futilous are the feverish dreams of the ancient Rabbins concerning the Foundation-Stone of the Temple. Some assert that God placed this stone in the centre of the world, for a future basis and settled consistency for the earth to rest upon. Others held this stone to be the first matter out of which all the beautiful visible beings of the world have been hewn forth and produced to light. Others relate that this was the very same stone laid by Jacob for a pillow under his head, in that night when he dreamed of an angelic vision at Bethel, and afterwards anointed and consecrated it to God. Which when Solomon had found (no doubt by forged revelation or some tedious search like another Rabbi Selemoh) he durst not but lay it sure, as the principal Foundation-Stone of the Temple. Nay, they say further, he caused to be engraved upon it the Tetragrammaton, or the ineffable name of Jehovah."

It will be seen that the Masonic traditions on the subject of the Stone of Foundation do not differ very materially from these Rabbinical ones, although they add a few additional circumstances.

In the Masonic legend, the Foundation-Stone first makes its appearance, as we have already said, in the days of Enoch, who placed it in the bowels of Mount Moriah.

There it was subsequently discovered by King Solomon, who deposited it in a crypt of the first Temple, where it remained concealed until the foundations of the second Temple were laid, when it was discovered and removed to the Holy of Holies. But the most important point of the legend of the Stone of Foundation is its intimate and constant connection with the Tetragrammaton or ineffable name. It is this name, inscribed upon it within the sacred and symbolic delta, that gives to the stone all its Masonic value and significance. It is upon this fact, that it was so inscribed, that its whole symbolism depends.

Looking at these traditions in anything like the light of historical narratives, we are compelled to consider them, to use the plain language of Lee, "but as so many idle and absurd conceits." We must go behind the legend, which we acknowledge at once to be only an allegory, and study its symbolism.

The following facts can, I think, be readily established from history. First, that there was a very general prevalence among the earliest nations of antiquity of the worship of stones as the representatives of Deity; secondly, that in almost every ancient temple there was a legend of a sacred or mystical stone; thirdly, that this legend is found in the Masonic system; and lastly, that the mystical stone there has received the name of the "Stone of Foundation."

Now, as in all the other systems the stone is admitted to be symbolic, and the traditions connected with it mystical, we are compelled to assume the same predicates of the Masonic stone. It, too, is symbolic, and its legend a myth or an allegory.

Of the fable, myth, or allegory, Bailly has said that, "subordinate to history and philosophy, it only deceives that it may the better instruct us. Faithful in preserving the realities which are confided to it, it covers with its seductive envelop the lessons of the one and the truths of the other." It is from this standpoint that we are to view the allegory of the Stone of Foundation, as developed in one of the most interesting and important symbols of Masonry.

The fact that the mystical stone in all the ancient religions was a symbol of the Deity, leads us necessarily to the conclusion that the Stone of Foundation was also a symbol of Deity. And this symbolic idea is strengthened by the Tetragrammaton, or sacred name of God, that was inscribed upon it. This ineffable name sanctifies the stone upon which it is engraved as the symbol of the Grand Architect. It takes from it its heathen signification as an idol, and consecrates it to the worship of the true God.

The predominant idea of the Deity, in the Masonic system, connects him with his creative and formative power. God is to the Freemason *Al Gabil*, as the Arabians called him, that is, *The Builder;* or, as expressed in his Masonic title, the *Grand Architect of the Universe*, by common consent abbreviated in the formula G A O T U. Now, it is evident that no symbol could so appropriately suit him in this character as the Stone of Foundation, upon which he is allegorically supposed to have erected his world. Such a symbol closely connects the creative work of God, as a pattern and exemplar, with the workman's erection of his temporal building on a similar foundation-stone.

But this Masonic idea is still further to be extended. The great object of all Masonic labor is *Divine truth*. The search for the *lost word* is the search for truth. But Divine truth is a term synonymous with God. The ineffable name is a symbol of truth, because God, and God alone, is truth. It is properly a Scriptural idea. The Book of Psalms abounds with this sentiment. Thus it is said that the truth of the Lord "reacheth unto the clouds," and that "his truth endureth unto all generations." If, then, God is truth, and the Stone of Foundation is the Masonic symbol of God, it follows that it must also be the symbol of Divine truth.

When we have arrived at this point in our speculations, we are ready to show how all the myths and legends of the Stone of Foundation may be rationally explained as parts of that beautiful "science of morality, veiled in allegory and illustrated by symbols," which is the acknowledged definition of Freemasonry.

In the Masonic system there are two temples: the first temple, in which the degrees of Ancient Craft Masonry are concerned, and the second temple, with which the higher degrees, and especially the Royal Arch, are related. The first temple is symbolic of the present life; the second temple is symbolic of the life to come. The first temple, the present life, must be destroyed; on its foundations the second temple, the life eternal, must be built.

But the mystical stone was placed by King Solomon in the foundations of the first Temple. That is to say, the first temple of our present life must be built on the sure foundation of Divine truth, "for other foundation can no man lay."

But although the present life is necessarily built upon the foundation of truth, yet we never thoroughly attain it in this sublunary sphere. The Foundation-Stone is concealed in the first temple, and the Master Mason knows it not. He has not the true word. He receives only a substitute.

But in the second temple of the future life, we have passed from the grave which had been the end of our labors in the first. We have removed the rubbish, and have found that Stone of Foundation which had been hitherto concealed from our eyes. We now throw aside the substitute for truth which had contented us in the former temple, and

the brilliant effulgence of the Tetragrammaton and the Stone of Foundation are discovered, and thenceforth we are the possessors of the true word—of Divine truth. And in this way, the Stone of Foundation, or Divine truth, concealed in the first temple, but discovered and brought to light in the second, will explain that passage of the Apostle: "For now we see through a glass darkly; but then, face to face: now I know in part; but then I shall know face to face."

And so the result of this inquiry is, that the Masonic Stone of Foundation is a symbol of Divine truth, upon which all speculative Masonry is built, and the legends and traditions which refer to it are intended to describe, in an allegorical way, the progress of truth in the soul, the search for which is a Mason's labor, and the discovery of which is his reward.

Stone Pavement. Oliver says that, in the English system, "the stone pavement is a figurative appendage to a Master Masons' Lodge, and, like that of the Most Holy Place in the Temple, is for the High Priest to walk on." This is not recognized in the American system, where the stone or mosaic pavement is appropriated to the Entered Apprentice's Degree.

Stone, Rejected. St. Matthew records (xxi. 42) that our Lord said to the chief priests and elders, "Did ye never read in the Scriptures, The stone which the builders rejected, the same is become the head of the corner?" Commenting on this, Dr. Adam Clarke says: "It is an expression borrowed from masons, who, finding a stone which, being tried in a particular place, and appearing improper for it, is thrown aside and another taken; however, at last, it may happen that the *very stone* which had been before *rejected* may be found the most suitable as *the head stone of the corner*." This is precisely the symbolism of the Mark Master or Fourth Degree of the American Rite, where the *rejected stone* is suggested to the neophyte "as a consolation under all the frowns of fortune, and as an encouragement to hope for better prospects." Bro. G. F. Yates says that the symbolism of the rejected stone in the present Mark Degree is not in the original Master Mark Mason's Degree, out of which Webb manufactured his ritual, but was introduced by him from some other unknown source.

Stone-Squarers. See *Giblim*.

Stone, White. Among the ancient Greeks and Romans, sentence was given in courts of judicature by white and black stones or pebbles. Those who were in favor of acquittal cast a white stone, and those who were for condemning, a black one. So, too, in popular elections a white stone was deposited by those who were favorable to the candidate, and a black one by those who wished to reject him. In this ancient practise we find the origin of white and black balls in the Masonic ballot. Hence, too, the white stone has become the symbol of absolution in judgment, and of the conferring of honors and rewards. The white stone with the new name, mentioned in the Mark Master's Degree, refers to the key-stone.

Stone, William Leete. An American journalist and writer, who was born in the State of New York in 1792, and died in 1844. He was the author of several literary works, generally of a biographical character. But his largest work was *Letters on Masonry and anti-Masonry, addressed to the Hon. John Quincy Adams*, New York, 1832, 8vo, pp. 566. This was one of the productions which were indebted for their appearance to the anti-Masonic excitement that prevailed at that time in this country. Although free from the bitterness of tone and abusive language which characterized most of the contemporaneous writings of the anti-Masons, it is, as an argumentative work, discreditable to the critical acumen of the author. It abounds in statements made without authority and unsustained by proofs, while its premises being in most instances false, its deductions are necessarily illogical.

Stone-Worship. This was, perhaps, the earliest form of fetishism. Before the discovery of metals, men were accustomed to worship unhewn stones. From Chna, whom Sanchoniathan calls "the first Phœnician," the Canaanites learned the practise, the influence of which we may trace in the stone pillar erected and consecrated by Jacob. The account in Genesis xxviii. 18, 22, is that "Jacob took the stone that he had put for his pillows and set it up for a pillar, and poured oil upon the top of it; and he called the name of that place Bethel, saying, This stone which I have set for a pillar shall be God's house." The Israelites were repeatedly commanded to destroy the stone idols of the Canaanites, and Moses corrects his own people when falling into this species of idolatry.

Various theories have been suggested as to the origin of stone-worship. Lord Kames' theory was that stones erected as monuments of the dead became the place where posterity paid their veneration to the memory of the deceased, and that the monumental stones at length became objects of worship, the people having lost sight of the emblematical signification, which was not readily understood.

Others have sought to find the origin of stone-worship in the stone that was set up and anointed by Jacob at Bethel, and the tradition of which had extended into the heathen nations and become corrupted. It is certain that the Phœnicians worshiped sacred stones under the name of *Bœtylia*, which word is evidently derived from the Hebrew *Bethel*, and this undoubtedly gives some appearance of probability to the theory.

But a third theory supposes that the worship of stones was derived from the unskilfulness of the primitive sculptors, who, unable to frame, by their meager principles of plastic art, a true image of the God whom they adored, were content

to substitute in its place a rude or scarcely polished stone. Hence the Greeks, according to Pausanias, originally used unhewn stones to represent their deities, thirty of which, that historian says, he saw in the city of Pharæ. These stones were of a cubical form, and, as the greater number of them were dedicated to the god Hermes, or Mercury, they received the generic name of *Hermæ*. Subsequently, with the improvement of the plastic art, the head was added.

So difficult, indeed, was it, in even the most refined era of Grecian civilization, for the people to divest themselves of the influences of this superstition, that Theophrastus characterizes "the superstitious man" as one who could not resist the impulse to bow to those mysterious stones which served to mark the confluence of the highways.

One of these consecrated stones was placed before the door of almost every house in Athens. They were also placed in front of the temples, in the gymnasia or schools, in libraries, and at the corners of streets, and in the roads. When dedicated to the god Terminus they were used as landmarks, and placed as such upon the concurrent lines of neighboring possessions.

The Thebans worshiped Bacchus under the form of a rude, square stone.

Arnobius says that Cybele was represented by a small stone of a black color. Eusebius cites Porphyry as saying that the ancients represented the Deity by a black stone, because his nature is obscure and inscrutable. The reader will here be reminded of the black stone, *Hadsjar el Aswad*, placed in the southwest corner of the Kaaba at Mecca, which was worshiped by the ancient Arabians, and is still treated with religious veneration by the modern Mohammedans. The Mussulman priests, however, say that it was originally white, and of such surprising splendor that it could be seen at the distance of four days' journey, but that it has been blackened by the tears of pilgrims.

The Druids, it is well known, had no other images of their gods but cubical or sometimes columnar stones, of which Toland gives several instances.

The Chaldeans had a sacred stone, which they held in great veneration, under the name of *Mnizuris*, and to which they sacrificed for the purpose of evoking the Good Demon.

Stone-worship existed among the early American races. Squier quotes Skinner as asserting that the Peruvians used to set up rough stones in their fields and plantations, which were worshiped as protectors of their crops. And Gama says that in Mexico the presiding god of the spring was often represented without a human body, and in place thereof a pilaster or square column, whose pedestal was covered with various sculptures.

Indeed, so universal was this stone-worship, that Higgins, in his *Celtic Druids*, says that "throughout the world the first object of idolatry seems to have been a plain, unwrought stone, placed in the ground, as an emblem of the generative or procreative powers of nature." And Bryant, in his *Analysis of Ancient Mythology*, asserts that "there is in every oracular temple some legend about a stone."

Without further citations of examples from the religious usages of antiquity, it will, I think, be conceded that the cubical stone formed an important part of the religious worship of primitive nations. But Cudworth, Bryant, Faber, and all other distinguished writers who have treated the subject, have long since established the theory that the Pagan religions were eminently symbolic. Thus, to use the language of Dudley, the pillar or stone "was adopted as a symbol of strength and firmness—a symbol, also, of the Divine power, and, by a ready inference, a symbol or idol of the Deity himself." And this symbolism is confirmed by Phurnutus, whom Toland quotes as saying that the god Hermes was represented without hands or feet, being a cubical stone, because the cubical figure betokened his solidity and stability.

The influence of this old stone worship, but of course divested of its idolatrous spirit, and developed into the system of symbolic instruction, is to be found in Masonry, where the reference to sacred stones is made in the Foundation-Stone, the Cubical Stone, the Corner-Stone, and some other symbols of a similar character. Indeed, the stone supplies Masonic science with a very important and diversified symbolism.

As stone-worship was one of the oldest of the deflections from the pure religion, so it was one of the last to be abandoned. A decree of the Council of Arles, which was held in the year 452, declares that "if, in any diocese, any infidel either lighted torches or worshipped trees, fountains, or *stones*, or neglected to destroy them, he should be found guilty of sacrilege." A similar decree was subsequently issued by the Council of Tours in 567, that of Nantes in 658, and that of Toledo in 681. Charlemagne, of France, in the eighth century, and Canute, of England, in the eleventh, found it necessary to execrate and forbid the worship of stones.

Even in the present day, the worship has not been altogether abandoned, but still exists in some remote districts of Christendom. Scheffer, in his *Description of Lapland* (cited by Mr. Tennent, in *Notes and Queries*, 1st ser., v. 122), says that in 1673 the Laplanders worshiped an unhewn stone found upon the banks of lakes and rivers, and which they called "*kied kie jubmal*, that is, the stone god." Martin, in his *Description of the Western Islands* (p. 88), says: "There is a stone set up near a mile to the south of St. Columbus's church, about eight feet high and two broad. It is called by the natives the *bowing stone;* for

when the inhabitants had the first sight of the church, they set up this, and then bowed, and said the Lord's Prayer." He also describes several other stones in different parts of the islands which were objects of veneration. Finally, in a work published about twenty years ago by the Earl of Roden, entitled *Progress of the Reformation in Ireland*, he says (p. 51), that at Inniskea, an island off the coast of Mayo, "a stone carefully wrapped up in flannel is brought out at certain periods to be adored; and when a storm arises, this god is supplicated to send a wreck on their coasts."

Tennent, to whom I am indebted for these citations, adds another from Borlase, who, in his *Antiquities of Cornwall*, says (b. iii., c. ii., p. 162), that "after Christianity took place, many [in Cornwall] continued to worship these stones; coming thither with lighted torches, and praying for safety and success."

It is more than probable that in many remote regions of Europe, where the sun of Christianity has only darted its dimmest rays, this old worship of sacred stones still remains.

Strasburg, Cathedral of. This has always been considered as one of the finest Gothic buildings in Europe. The original cathedral was founded in 504, but in 1007 it was almost completely destroyed by lightning. The present edifice was begun in 1015 and completed in 1439. The cathedral of Strasburg is very closely connected with the history of Masonry. The most important association of master builders, says Stieglitz (*Von Altdeusch. Bauk.*), for the culture and extension of German art, was that which took place at Strasburg under Erwin von Steinbach. As soon as this architect had undertaken the direction of the works at the Strasburg cathedral, he summoned Masons out of Germany and Italy, and formed with them a brotherhood. Thence *hütten*, or Lodges, were scattered over Europe. In 1459, on April 25th, says the Abbé Grandidier, the Masters of many of these Lodges assembled at Ratisbon and drew up an Act of Fraternity, which made the master of the works at Strasburg, and his successors, the perpetual Grand Masters of the Fraternity of German Masons. This was confirmed by the Emperor Maximilian in 1498. By the statutes of this association, the *Haupt-Hütte*, Grand or Mother Lodge of Strasburg, was invested with a judicature, without appeal, over all the Lodges of Germany. Strasburg thus takes in German Masonry a position equivalent to that of legendary Lodge York in the Masonry of England, or Kilwinning in that of Scotland. And although the Haupt-Hütte of Strasburg with all other Haupt-Hütten were abolished by an imperial edict on August 16, 1731, the Mother Lodge never lost its prestige. "This," says Findel (*Hist.*, 72), "is the case even now in many places in Germany; the Saxon Stone-Masons still regarding the Strasburg Lodge as their chief Lodge." (See *Stone-Masons of the Middle Ages.*)

Strasburg, Congress of. Two important Masonic Congresses have been held at Strasburg.

The First Congress of Strasburg. This was convoked in 1275 by Erwin von Steinbach. The object was the establishment of a brotherhood for the continuation of the labors on the cathedral. It was attended by a large concourse of Masons from Germany and Italy. It was at this Congress that the German builders and architects, in imitation of their English brethren, assumed the name of *Freemasons*, and established a system of regulations for the government of the Craft. (See *Combinations of Masons.*)

The Second Congress of Strasburg. This was convoked by the Grand Lodge, or Haupte-Hütte of Strasburg, in 1564, as a continuation of one which had been held in the same year at Basle. Here several statutes were adopted, by which the *Steinwerksrecht*, or Stone-Masons' law, was brought into a better condition.

Strasburg, Constitutions of. On April 25, 1459, nineteen Bauhütten, or Lodges, in Southern and Central Germany met at Ratisbon, and adopted regulations for the government of the German stone-masons. Another meeting was held shortly afterward at Strasburg, where these statutes were definitively adopted and promulgated, under the title of *Ordenunge der Steinmetzen Strasburg*, or "Constitutions of the Stone-Masons of Strasburg." They from time to time underwent many alterations, and were confirmed by Maximilian I. in 1498, and subsequently by many succeeding emperors. This old document has several times been printed; in 1810, by Krause, in his *drei ältesten Kunsterkunden der Freimaurerbrüderschaft;* in 1819, by Heldmann, in *die drei ältesten geschichtlichen Denkmale der deutschen Freimaurerbrüderschaft;* in 1844, by Heideloff, in his *Bauhütte des Mittelalters in ihrer wahren Bedeutung;* Findel also, in 1866, inserted portions of it in his *Geschichte der Freimaurerei*, of which work there is a good English translation.*

The invocation with which these Constitutions commence is different from that of the English Constitutions. The latter begin thus: "The might of the Father of Heaven, with the wisdom of the blessed Son, through the grace of God and goodness of the Holy Ghost, that be three persons in one Godhead, be with us," etc. The Strasburg Constitutions begin: "In the name of the Father, and of the Son, and of the Holy Ghost, and of our gracious Mother Mary, and also her blessed servants, the holy four crowned martyrs of everlasting memory"; etc. The reference to the Virgin

*Findel says the Strasburg *Constitution* was first printed, from a well-authenticated manuscript, by Heldmann. Others also confirm this. [E. E. C.]

Mary and to the four crowned martyrs is found in none of the English Constitutions except the oldest of them, the Halliwell or Regius MS. (line 498). But Kloss has compared the Strasburg and the English statutes, and shown the great similarity in many of the regulations of both.

Strength. This is said to be one of the three principal supports of a Lodge, as the representative of the whole Institution, because it is necessary that there should be Strength to support and maintain every great and important undertaking, not less than there should be Wisdom to contrive it, and Beauty to adorn it. Hence, Strength is symbolized in Masonry by the Doric column, because, of all the orders of architecture, it is the most massive; by the Senior Warden, because it is his duty to strengthen and support the authority of the Master; and by Hiram of Tyre, because of the material assistance that he gave in men and materials for the construction of the Temple.

Strict Observance, Rite of. The Rite of Strict Observance was a modification of Masonry, based on the Order of Knights Templar, and introduced into Germany in 1754 by its founder, the Baron von Hund. It was divided into the following seven degrees: 1. Apprentice; 2. Fellow-Craft; 3. Master; 4. Scottish Master; 5. Novice; 6. Templar; 7. Professed Knight.

According to the system of the founder of this Rite, upon the death of Jacques de Molay, the Grand Master of the Templars, Pierre d'Aumont, the Provincial Grand Master of Auvergne, with two Commanders and five Knights, retired for purposes of safety into Scotland, which place they reached disguised as Operative Masons, and there finding the Grand Commander, George Harris, and several Knights, they determined to continue the Order. Aumont was nominated Grand Master, at a Chapter held on St. John's Day, 1313. To avoid persecution, the Knights became Freemasons. In 1361, the Grand Master of the Temple removed his seat to Old Aberdeen, and from that time the Order, under the veil of Masonry, spread rapidly through France, Germany, Spain, Portugal, and elsewhere. These events constituted the principal subject of many of the degrees of the Rite of Strict Observance. The others were connected with alchemy, magic, and other superstitious practises. The great doctrine contended for by the followers of the Rite was, "that every true Mason is a Knights Templar." For an account of the rise, the progress, the decay, and the final extinction of this once important Rite, see *Hund, Baron von.*

Strict Trial. See *Vouching.*

Striking Off. Striking off a Lodge from the registry of the Grand Lodge is a phrase of English Masonry, equivalent to what in America is called a forfeiture of charter. It is more commonly called "erasing from the list of Lodges."

Stuart Masonry. This title is given by Masonic historians to that system of Freemasonry which is supposed to have been invented by the adherents of the exiled house of Stuart for the purpose of being used as a political means of restoring, first, James II., and afterward his son and grandson, James and Charles Edward, respectively known in history as the Chevalier St. George and the Young Pretender. Most of the conclusions to which Masonic writers have arrived on the subject of this connection of the Stuarts with the high degrees of Masonry are based on conjecture; but there is sufficient internal evidence in the character of some of these degrees, as well as in the known history of their organization, to establish the fact that such a connection did actually exist.

The first efforts to create a Masonic influence in behalf of his family is attributed to James II., who had abdicated the throne of England in 1688. Of him, Noorthouck says (*Constitutions*, 1784, p. 192), that he was not "a Brother Mason," and sneeringly adds, in his index, that "he might have been a better king had he been a Mason." But Lenning says that after his flight to France, and during his residence at the Jesuit College of Clermont, where he remained for some time, his adherents, among whom were the Jesuits, fabricated certain degrees with the ulterior design of carrying out their political views. At a later period these degrees were, he says, incorporated into French Masonry under the name of the Clermont system, in reference to their original construction at that place. Gädicke had also said that many Scotchmen followed him, and thus introduced Freemasonry into France. But this opinion is only worthy of citation because it proves that such an opinion was current among the German scholars of the last century.

On his death, which took place at the palace of St. Germain en Laye in 1701, he was succeeded in his claims to the British throne by his son, who was recognized by Louis XIV., of France, under the title of James III., but who is better known as the Chevalier St. George, or the Old Pretender. He also sought, says Lenning, to find in the high degrees of Masonry a support for his political views, but, as he remarks, with no better results than those which had attended the attempts of his father.

His son, Prince Charles Edward, who was commonly called by the English the Young Pretender, took a more active part than either his father or grandfather in the pursuits of Masonry; and there is abundant historical evidence that he was not only a Mason, but that he held high office in the Order, and was for a time zealously engaged in its propagation; always, however, it is supposed, with political views.

In 1745 he invaded Scotland, with a view to regain the lost throne of his ancestors, and met for some time with more than partial success. On September 24, 1745, he

was admitted into the Order of Knights Templar, and was elected Grand Master, an office which it is said that he held until his death. On his return to France after his ill-fated expedition, the Prince is said to have established at the city of Arras, on April 15, 1747, a Rose Croix Chapter under the title of Scottish Jacobite Chapter. In the Patent for this Chapter he styles himself "King of England, France, Scotland, and Ireland, and, as such, Substitute Grand Master of the Chapter of Herodem, known under the title of Knight of the Eagle and Pelican, and since our misfortunes and disasters under that of Rose Croix."

In 1748, the Rite of the *Veille-Bru*, or Faithful Scottish Masons, was created at Toulouse in grateful remembrance of the reception given by the Masons of that Orient to Sir Samuel Lockhart, the aide-de-camp of the Pretender. Ragon says (*Orth. Maçon.*, p. 122), in a note to this statement, the "favorites who accompanied this prince into France were in the habit of selling to speculators Charters for Mother Lodges, Patents for Chapters, etc. These titles were their property, and they did not fail to make use of them as a means of livelihood."

Ragon says (*Thuil. Gen.*, p. 367), that the degrees of Irish Master, Perfect Irish Master, and Puissant Irish Master were invented in France, in 1747, by the favorites of Charles Edward Stuart, and sold to the partisans of that prince. One degree was openly called the "Scottish Master of the Sacred Vault of James VI.," as if to indicate its Stuart character. The degree still exists as the Thirteenth of the Ancient and Accepted Scottish Rite, but it has been shorn of its political pretensions and its title changed.

Findel has given in his *History of Freemasonry* (English translation, p. 209) a very calm and impartial account of the rise of this Stuart Masonry. He says:

"Ever since the banishment of the Stuarts from England in 1688, secret alliances had been kept up between Rome and Scotland; for to the former place the Pretender James Stuart had retired in 1719, and his son Charles Edward was born there in 1720; and these communications became the more intimate, the higher the hopes of the Pretender rose. The Jesuits played a very important part in these conferences. Regarding the reinstatement of the Stuarts and the extension of the power of the Roman church as identical, they sought at that time to make the society of Freemasons subservient to their ends. But to make use of the Fraternity to restore the exiled family to the throne could not possibly have been contemplated, as Freemasonry could hardly be said to exist in Scotland then. Perhaps in 1724, when Ramsay was a year in Rome, or in 1728, when the Pretender in Parma kept up an intercourse with the restless Duke of Wharton, a Past Grand Master, this idea was first entertained; and then, when it was apparent how difficult it would be to corrupt the loyalty and fealty of Freemasonry in the Grand Lodge of Scotland, founded in 1736, this scheme was set on foot, of assembling the faithful adherents of the banished royal family in the high degrees! The soil which was best adapted for this innovation was France, where the low ebb to which Masonry had sunk had paved the way for all kinds of new-fangled notions, and where the Lodges were composed of Scotch conspirators and accomplices of the Jesuits. When the path had thus been smoothed by the agency of these secret propagandists, Ramsay, at that time Grand Orator (an office unknown in England), by his speech completed the preliminaries necessary for the introduction of the high degrees; their further development was left to the instrumentality of others, whose influence produced a result somewhat different from that originally intended. Their course we can now pursue, assisted by authentic historical information. In 1752, Scottish Masonry, as it was denominated, penetrated into Germany (Berlin) prepared from a ritual very similar to one used in Lille in 1749 and 1750. In 1743, Thory tells us, the Masons in Lyons, under the name of the 'Petit Elu,' invented the degree of Kadosh, which represents the revenge of the Templars. The Order of Knights Templar had been abolished in 1311, and to that epoch they were obliged to have recourse when, after the banishment of several Knights from Malta in 1720 because they were Freemasons, it was not longer possible to keep up a connection with the Order of St. John or Knights of Malta, then in the plenitude of their power under the sovereignty of the Pope. A pamphlet entitled *Freemasonry Divested of all its Secrets*, published in Strasburg in 1745, contains the first glimpse of the Strict Observance, and demonstrates how much they expected the brotherhood to contribute towards the expedition in favor of the Pretender."

From what has been said, it is evident that the exiled house of Stuart exercised an important part in the invention and extension of what has been called the High Masonry. The traces of the political system are seen at the present day in the internal organization of some of the high degrees —especially in the derivation and meaning of certain significant words. There is, indeed, abundant reason for believing that the substitute word of the Third Degree was changed by Ramsay, or some other fabricator of degrees, to give it a reference to James II. as the "son of the widow," Queen Henrietta Maria.

Further researches are needed to enable any author to satisfactorily write all the details of this interesting episode in the history of continental Masonry. Documents are still wanting to elucidate certain intricate and, at present, apparently contradictory points.

Stukely, Dr. In accordance with the Doctor's diary, he "was made a Mason,

January 6, 1721, at the Salutation Tavern, Tavistock street, London, with Mr. Collins and Captain Rowe, who made the famous diving engine." The Doctor adds: "I was the first person in London made a Freemason in that city for many years. We had great difficulty to find members enough to perform the ceremony. Immediately upon that it took a run, and ran itself out of breath through the folly of its members." The Stukely papers containing the Doctor's diary are of continuous interest; and according to Rev. W. C. Lukis, P.M., F.S.A., "Pain (or Payne) had been re-elected Grand Master in 1720, and Dr. Desaguliers was the Immediate Past Grand Master." The last mentioned Brother pronouncing the Oration on June 24, 1721, at Stationers' Hall; on the following St. John's Day (Evangelist), December 27, 1721, "We met at the Fountain Tavern, Strand, and by consent of the Grand Master present, Dr. Beal constituted a new Lodge, where I was chosen Master." A trite remark of Dr. Stukely as to symbolism, was: "The first learning of the world consisted chiefly of symbols, the wisdom of the Chaldeans, Phœnicians, Egyptians, Jews, of Zoroaster, Sanchoniathon, Pherecydes, Syrus, Pythagoras, Socrates, Plato, of all the ancients that have come to our hand, is symbolic."

Sublime. The Third Degree is called "the Sublime Degree of a Master Mason," in reference to the exalted lessons that it teaches of God and of a future life. The epithet is, however, comparatively modern. It is not to be found in any of the rituals of the last century. Neither Hutchinson, nor Smith, nor Preston use it; and it was not, probably, in the original Prestonian lecture. Hutchinson speaks of "the most sacred and solemn Order" and of "the exalted," but not of "the sublime" degree. Webb, who based his lectures on the Prestonian system, applies no epithet to the Master's Degree. In an edition of the *Constitutions*, published at Dublin in 1769, the Master's Degree is spoken of as "the most respectable"; and forty years ago the epithet "high and honorable" was used in some of the rituals of this country. The first book in which we meet with the adjective "*sublime*" applied to the Third Degree, is the *Masonic Discourses* of Dr. T. M. Harris, published at Boston in 1801. Cole also used it in 1817, in his *Freemasons' Library;* and about the same time Jeremy Cross, the well-known lecturer, introduced it into his teachings, and used it in his *Hieroglyphic Chart*, which was, for many years, the text-book of American Lodges. The word is now, however, to be found in the modern English lectures, and is of universal use in the rituals of the United States, where the Third Degree is always called "the sublime degree of a Master Mason."

The word *sublime* was the password of the Master's Degree in the Adonhiramite Rite, because it was said to have been the surname of Hiram, or Adonhiram. On this subject, Guillemain, in his *Recueil Précieux* (i., 91), makes the following singular remarks:

"For a long time a great number of Masons were unacquainted with this word, and they erroneously made use of another in its stead which they did not understand, and to which they gave a meaning that was doubtful and improbable. This is proved by the fact that the first knights adopted for the Master's password the Latin word *Sublimis*, which the French, as soon as they received Masonry, pronounced *Sublime*, which was so far very well. But some profanes, who were desirous of divulging our secrets, but who did not perfectly understand this word, wrote it *Jiblime*, which they said signified *excellence*. Others, who followed, surpassed the error of the first by printing it *Giblos*, and were bold enough to say that it was the name of the place where the body of Adonhiram was found. As in those days the number of uneducated was considerable, these ridiculous assertions were readily received, and the truth was generally forgotten."

The whole of this narrative is a mere visionary invention of the founder of the Adonhiramite system; but it is barely possible that there is some remote connection between the use of the word *sublime* in that Rite, as a significant word of the Third Degree, and its modern employment as an epithet of the same degree. However, the ordinary signification of the word, as referring to things of an exalted character, would alone sufficiently account for the use of the epithet.

Sublime Degrees. The eleven degrees of the Ancient and Accepted Scottish Rite, from the Fourth to the Fourteenth inclusive, are so called. Thus Dalcho (*Report of Com.*, 1802) says: "Although many of the *Sublime degrees* are in fact a continuation of the Blue degrees, yet there is no interference between the two bodies."

Sublime Grand Lodge. A title formerly given in the Ancient and Accepted Rite to what is now simply called a Lodge of Perfection. Thus, in 1801, Dr. Dalcho delivered in Charleston, South Carolina, an address which bears the title of "An oration delivered in the Sublime Grand Lodge."

Sublime Knight Elected. (*Sublime Chevalier élu.*) Called also Sublime Knight Elected of the Twelve. The Eleventh Degree of the Ancient and Accepted Scottish Rite. Its legend is that it was instituted by King Solomon after punishment had been inflicted on certain traitors at the Temple, both as a recompense for the zeal and constancy of the Illustrious Elect of Fifteen, who had discovered them, and also to enable him to elevate other deserving brethren from the lower degrees to that which had been vacated by their promotion. Twelve of these fifteen he elected Sublime Knights, and made the selection by ballot, that he might give none offense, putting the names

of the whole in an urn. The first twelve that were drawn he formed into a Chapter, and gave them command over the twelve tribes, bestowing on them a name which in Hebrew signifies a true man.

The meeting of a body of Sublime Knights is called a Chapter.

The room is hung with black strewed with tears.

The presiding officer represents King Solomon, and in the old rituals is styled "Most Puissant," but in recent ones "Thrice Illustrious."

The apron is white, lined and bordered with black, with black strings; on the flap a flaming heart.

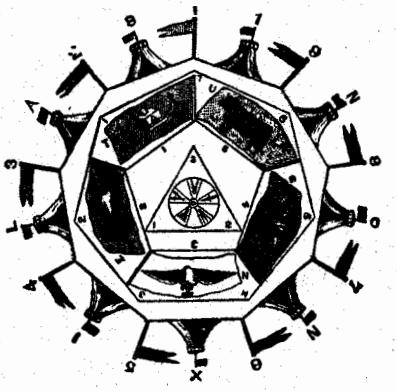
The sash is black, with a flaming heart on the breast, suspended from the right shoulder to the left hip.

The jewel is a sword of justice.

This is the last of the three Elus which are found in the Ancient and Accepted Scottish Rite. In the French Rite they have been condensed into one, and make the Fourth Degree of that ritual, but not, as Ragon admits, with the happiest effect.

The names of the Twelve Illustrious Knights selected to preside over the twelve tribes, as they have been transmitted to us in the ritual of this degree, have undoubtedly assumed a very corrupted form. The restoration of their correct orthography, and with it their true signification, is worthy the attention of the Masonic student.

Sublime Masons. The initiates into the Fourteenth degree of the Ancient and Accepted Rite are so called. Thus Dalcho (Orat., p. 27) says: "The Sublime Masons view the symbolic system with reverence, as forming a test of the character and capacity of the initiated." This abbreviated form is now seldom used, the fuller one of "Grand, Elect, Perfect, and Sublime Masons" being more generally employed.



Sublime Prince of the Royal Secret. This is the Thirty-second Degree of the Ancient and Accepted Rite. There is abundant internal evidence, derived from the ritual and from some historical facts, that the degree of Sublime Prince of the Royal Secret was instituted by the founders of the Council of Emperors of the East and West, which body was established in the year 1758. It is certain that before that period we hear nothing of such a degree in any of the Rites. The Rite of Heredom or of Perfection, which was that instituted by the Council of Emperors, consisted of twenty-five degrees. Of these the Twenty-fifth, and highest, was the Prince of the Royal Secret. It was brought to America by Morin, as the summit of the High Masonry which he introduced, and for the propagation of which he had received his Patent. In the subsequent extension of the Scottish Rite about the beginning of the present century, by the addition of eight new degrees to the original twenty-five, the Sublime Prince of the Royal Secret became the Thirty-second.

Bodies of the Thirty-second Degree are called Consistories, and where there is a superintending body erected by the Supreme Council for the government of the inferior degrees in a State or Province, it is called a Grand Consistory.

The clothing of a Sublime Prince consists of a collar, jewel, and apron. The collar is black edged with white.

The jewel is a Teutonic cross of gold.

The apron is white edged with black. On the flap are embroidered six flags, three on each side the staffs in saltier, and the flags blue, red, and yellow. On the center of the flap, over these, is a Teutonic cross surmounted by an All-seeing Eye, and on the cross a double-headed eagle not crowned. On the body of the apron is the tracing-board of the degree. The most important

part of the symbolism of the degree is the tracing-board, which is technically called "The Camp." This is a symbol of deep import, and in its true interpretation is found that "royal secret" from which the degree derives its name. This Camp constitutes an essential part of the furniture of a Consistory during an initiation, but its explanations are altogether esoteric. It is a singular fact, that notwithstanding the changes which the degree must have undergone in being transferred from the Twenty-fifth of one Rite to the Thirty-second of another, no alteration was ever made in the Camp, which retains at the present day the same form and signification that were originally given to it.

The motto of the degree is "Spes mea in Deo est," i. e., My hope is in God.

Sublime Solomon. (*Salomon Sublime.*) A degree in the manuscript collection of Peuvret.

Sublimes, The. (*Les Sublimes.*) One of the degrees of the Ancient Chapter of Clermont.

Submission. Submission to the mediatorial offices of his brethren in the case of a dispute is a virtue recommended to the Mason, but not necessarily to be enforced. In the "Charges of a Freemason" (*Constitutions*, 1723, p. 56) it is said (vi., 6): "With

respect to Brothers or Fellows at law, the Master and Brethren should kindly offer their mediation; which ought to be thankfully *submitted* to by the contending Brethren; and if that *submission* is impracticable, they must, however, carry on their process or lawsuit without wrath or rancor."

Subordinate Lodge. So called to indicate its subordination to the Grand Lodge as a supreme, superintending power. (See *Lodge*.)

Subordinate Officers. In a Grand Lodge, all the officers below the Grand Master, and in a Lodge, all those below the Worshipful Master, are styled *Subordinate Officers*. So, too, in all the other branches of the Order, the presiding officer is supreme, the rest subordinate.

Subordination. Although it is the theory of Freemasonry that all the brethren are on a level of equality, yet in the practical working of the Institution a subordination of rank has been always rigorously observed. So the Charges approved in 1722, which had been collected by Anderson from the Old Constitutions, say: "These rulers and governors, supreme and subordinate, of the ancient Lodge, are to be obeyed in their respective stations by all the Brethren, according to the Old Charges and Regulations, with all humility, reverence, love, and alacrity." (*Constitutions*, 1723, p. 52.)

Substitute Ark. See *Ark, Substitute*.

Substitute Candidate. An arrangement resorted to in the Royal Arch Degree of the American system, so as to comply *pro forma* with the requisitions of the ritual. In the English, Scotch, and Irish systems, there is no regulation requiring the presence of three candidates, and, therefore, the practise of employing substitutes is unknown in those countries. In the United States the usage has prevailed from a very early period, although opposed at various times by conscientious Companions, who thought that it was an improper evasion of the law. Finally, the question as to the employment of substitutes came before the General Grand Chapter in September, 1872, when it was decided, by a vote of ninety-one to thirty, that the use of substitutes is not in violation of the ritual of Royal Arch Masonry or the installation charges delivered to a High Priest. The use of them was therefore authorized, but the Chapters were exhorted not to have recourse to them except in cases of emergency; an unnecessary exhortation, it would seem, since it was only in such cases that they had been employed.

Substitute Grand Master. The third officer in the Grand Lodge of Scotland. He presides over the Craft in the absence of the Grand and Deputy Grand Masters. The office was created in the year 1738. He is appointed by the Grand Master annually.

Substitute Word. This is an expression of very significant suggestion to the thoughtful Master Mason. If the *Word* is, in Masonry, a symbol of Divine Truth; if the search for the Word is a symbol of the search for that Truth; if the *Lost Word* symbolizes the idea that Divine Truth has not been found, then the *Substitute Word* is a symbol of the unsuccessful search after Divine Truth and the attainment in this life, of which the first Temple is a type, of what is only an approximation to it. The idea of a substitute word and its history is to be found in the oldest rituals of the last century; but the phrase itself is of more recent date, being the result of the fuller development of Masonic science and philosophy.

The history of the substitute word has been an unfortunate one. Subjected from a very early period to a mutilation of form, it underwent an entire change in some Rites, after the introduction of the high degrees; most probably through the influence of the Stuart Masons, who sought by an entirely new word to give a reference to the unfortunate representative of that house as the similitude of the stricken builder. (See *Macbenac*.) And so it has come to pass that there are now two substitutes in use, of entirely different form and meaning; one used on the Continent of Europe, and one in England and this country.

It is difficult in this case, where almost all the knowledge that we can have of the subject is so scanty, to determine the exact time when or the way in which the new word was introduced. But there is, I think, abundant internal evidence in the words themselves as to their appropriateness and the languages whence they came (the one being pure Hebrew, and the other, I think, Gaelic), as well as from the testimony of old rituals, to show that the word in use in the United States is the true word, and was the one in use before the revival.

Both of these words have, however, unfortunately been translated by persons ignorant of the languages whence they are derived, so that the most incorrect and even absurd interpretations of their significations have been given. The word in universal use in this country has been translated as "rottenness in the bone," or "the builder is dead," or by several other phrases equally as far from the true meaning.

The correct word has been mutilated. Properly, it consists of four syllables, for the last syllable, as it is now pronounced, should be divided into two. These four syllables compose three Hebrew words, which constitute a perfect and grammatical phrase, appropriate to the occasion of their utterance. But to understand them, the scholar must seek the meaning in each syllable, and combine the whole. In the language of Apuleius, I must forbear to enlarge upon these holy mysteries.

Succession to the Chair. The regulations adopted in 1721 by the Grand Lodge of England have been generally esteemed as setting forth the ancient landmarks of the Order. But certain regulations, which were adopted on the 25th of November, 1723, as amendments to or explanatory of these, being enacted under the same authority, and almost by the same persons, can scarcely be less binding upon the Order than the original regu-

lations. Both these compilations of Masonic law refer expressly to the subject of the succession to the chair on the death or removal of the Master.

The old regulation of 1721, in the second of the thirty-nine articles adopted in that year, is in the following words:

"In case of death or sickness, or necessary absence of the Master, the Senior Warden shall act as Master *pro tempore*, if no brother is present who has been Master of that Lodge before. For the absent Master's authority reverts to the last Master present, *though he cannot act till the Senior Warden has congregated the Lodge.*" (*Constitutions*, 1738, p. 153.)

The words in italics indicate that even at that time the power of calling the brethren together and "setting them to work," which is technically called "congregating the Lodge," was supposed to be vested in the Senior Warden alone during the absence of the Master; although, perhaps, from a supposition that he had greater experience, the difficult duty of presiding over the communication was entrusted to a Past Master. The regulation is, however, contradictory in its provisions. For if the "last Master present" could not act, that is, could not exercise the authority of the Master until the Senior Warden had congregated the Lodge, then it is evident that the authority of the Master did not revert to him in an unqualified sense, for that officer required no such concert nor consent on the part of the Warden, but could congregate the Lodge himself.

This evident contradiction in the language of the regulation probably caused, in a brief period, a further examination of the ancient usage, and accordingly on the 25th of November, 1723, a very little more than two years after, the following regulation was adopted:

"If a Master of a particular Lodge is deposed or demits, the Senior Warden shall forthwith fill the Master's chair till the next time of choosing; and ever since, in the Master's absence, he fills the chair, even though a former Master be present." (*Ibid.*)

The present Constitution of the Grand Lodge of England appears, however, to have been formed rather in reference to the regulation of 1721 than to that of 1723. It prescribes that on the death, removal, or incapacity of the Master, the Senior Warden, or in his absence, the Junior Warden, or in his absence, the immediate Past Master, or in his absence, the Senior Past Master, "shall act as Master in summoning the Lodge, until the next installation of Master." (Rule 141.) But the English Constitution goes on to direct that, "in the Master's absence, the immediate Past Master, or if he be absent, the Senior Past Master of the Lodge present shall take the chair. And if no Past Master of the Lodge be present, then the Senior Warden, or in his absence the Junior Warden, shall rule the Lodge."

Here again we find ourselves involved in the intricacies of a divided sovereignty. The Senior Warden congregates the Lodge, but a Past Master rules it. And if the Warden refuses to perform his part of the duty, then the Past Master will have no Lodge to rule. So that, after all, it appears that of the two the authority of the Senior Warden is the greater.

But in this country the usage has always conformed to the regulation of 1723, as is apparent from a glance at our rituals and monitorial works.

Webb, in his *Freemasons' Monitor* (edition of 1808), lays down the rule, that "in the absence of the Master, the Senior Warden is to govern the Lodge"; and that officer receives annually, in every Lodge in the United States, on the night of his installation, a charge to that effect. It must be remembered, too, that we are not indebted to Webb himself for this charge, but that he borrowed it, word for word, from Preston, who wrote long before, and who, in his turn, extracted it from the rituals which were in force at the time of his writing.

In the United States, accordingly, it has been held, that on the death or removal of the Master, his authority descends to the Senior Warden, who may, however, by courtesy, offer the chair to a Past Master present, after the Lodge has been congregated.

There is some confusion in relation to the question of who is to be the successor of the Master, which arises partly from the contradiction between the regulations of 1721 and 1723, and partly from the contradiction in different clauses of the regulation of 1723 itself. But whether the Senior Warden or a Past Master is to succeed, the regulation of 1721 makes no provision for an election, but implies that the vacancy shall be temporarily supplied during the official term, while that of 1723 expressly states that such temporary succession shall continue "till the next time of choosing," or, in the words of the present English Constitution, "until the next installation of Master."

But, in addition to the authority of the ancient regulation and general and uniform usage, reason and justice seem to require that the vacancy shall not be supplied permanently until the regular time of election. By holding the election at an earlier period, the Senior Warden is deprived of his right, as a member, to become a candidate for the vacant office. For the Senior Warden having been regularly installed, has of course been duly obligated to serve in the office to which he had been elected during the full term. If then an election takes place before the expiration of that term, he must be excluded from the list of candidates, because, if elected, he could not vacate his present office without a violation of his obligation. The same disability would affect the Junior Warden, who by a similar obligation is bound to the faithful discharge of his duties in the South. So that by anticipating the election, the two most prominent officers of the Lodge, and the two most likely to succeed the Master in due course of rotation, would be excluded from the chance of promo-

tion. A grievous wrong would thus be done to these officers, which no Dispensation of a Grand Master should be permitted to inflict.

But even if the Wardens were not ambitious of office, or were not likely, under any circumstances, to be elected to the vacant office, another objection arises to the anticipation of an election for Master which is worthy of consideration.

The Wardens, having been installed under the solemnity of an obligation to discharge the duties of their respective offices to the best of their ability, and the Senior Warden having been expressly charged that "in the absence of the Master he is to rule the Lodge," a conscientious Senior Warden might very naturally feel that he was neglecting these duties and violating this obligation, by permitting the office which he has sworn to temporarily occupy in the absence of his Master to be permanently filled by any other person.

On the whole, then, the old regulations, as well as ancient, uninterrupted, and uniform usage and the principles of reason and justice, seem imperatively to require that, on the death or removal of the Master, the chair shall be occupied temporarily until the regular time of election; and although the law is not equally explicit in relation to the person who shall fill that temporary position, the weight of law and precedent seems to incline toward the principle that the authority of the absent Master shall be placed in the hands of the Senior Warden.

Succoth. An ancient city of Palestine, about forty-five miles northeast of Jerusalem, and the site of which is now occupied by the village of Seikoot. It is the place near which Hiram Abif cast the sacred vessels for the Temple. (See *Clay Ground.*)

Sufferer. (*Souffrant.*) The Second Degree of the Order of Initiated Knights and Brothers of Asia.

Summons. A warning to appear at the meeting of a Lodge or other Masonic body. The custom of summoning the members of a Lodge to every communication, although now often neglected, is of very ancient date, and was generally observed up to a very recent period. In the Anderson Charges of 1722, it is said: "In ancient times, no Master or Fellow could be absent from the Lodge, especially when warned to appear at it, without incurring a severe censure." (*Constitutions*, 1723, p. 51.) In the Constitutions of the Cooke MS., about 1450, we are told that the Masters and Fellows were to be *forewarned* to come to the congregations. (L 902.) All the old records, and the testimony of writers since the revival, show that it was always the usage to summon the members to attend the meetings of the General Assembly or the particular Lodges. A summons of a Lodge is often improperly or illegally worded and care should be taken when issued.

Sun. Hardly any of the symbols of Masonry are more important in their signification or more extensive in their application than the sun. As the source of material light, it reminds the Mason of that intellectual light of which he is in constant search. But it is especially as the ruler of the day, giving to it a beginning and end, and a regular course of hours, that the sun is presented as a Masonic symbol. Hence, of the three lesser lights, we are told that one represents or symbolizes the sun, one the moon, and one the Master of the Lodge, because, as the sun rules the day and the moon governs the night, so should the Worshipful Master rule and govern his Lodge with equal regularity and precision. And this is in strict analogy with other Masonic symbolisms. For if the Lodge is a symbol of the world, which is thus governed in its changes of times and seasons by the sun, it is evident that the Master who governs the Lodge, controlling its time of opening and closing, and the work which it should do, must be symbolized by the sun. The heraldic definition of the sun as a bearing fits most appositely to the symbolism of the sovereignty of the Master. Thus Gwillim says: "The sun is the symbol of sovereignty, the hieroglyphic of royalty; it doth signify absolute authority." This representation of the sun as a symbol of authority, while it explains the reference to the Master, enables us to amplify its meaning, and apply it to the three sources of authority in the Lodge, and accounts for the respective positions of the officers wielding this authority. The Master, therefore, in the East is a symbol of the rising sun; the Junior Warden in the South, of the Meridian Sun; and the Senior Warden in the West, of the Setting Sun. So in the mysteries of India, the chief officers were placed in the east, the west, and the south, respectively, to represent Brahma, or the rising; Vishnu, or the setting; and Siva, or the meridian sun. And in the Druidical rites, the Arch-druid, seated in the east, was assisted by two other officers—the one in the west representing the moon, and the other in the south representing the meridian sun.

This triple division of the government of a Lodge by three officers, representatives of the sun in his three manifestations in the east, south, and west, will remind us of similar ideas in the symbolism of antiquity. In the Orphic mysteries, it was taught that the sun generated from an egg, burst forth with power to triplicate himself by his own unassisted energy. Supreme power seems always to have been associated in the ancient mind with a threefold division. Thus the sign of authority was indicated by the three-forked lightning of Jove, the trident of Neptune, and the three-headed Cerberus of Pluto. The government of the Universe was divided between these three sons of Saturn. The chaste goddess ruled the earth as Diana, the heavens as Luna, and the infernal regions as Hecate, whence her rites were only performed in a place where three roads met.

The sun is then presented to us in Masonry first as a symbol of light, but then more emphatically as a symbol of sovereign authority.

But, says Wemyss (*Symb. Lang.*), speaking of Scriptural symbolism, "the sun may be con-

sidered to be an emblem of Divine Truth," because the sun or light, of which it is the source, "is not only manifest in itself, but makes other things; so one truth detects, reveals, and manifests another, as all truths are dependent on, and connected with, each other more or less." And this again is applicable to the Masonic doctrine which makes the Master the symbol of the sun; for as the sun discloses and makes manifest, by the opening of day, what had been hidden in the darkness of night, so the Master of the Lodge, as the analogue of the ancient hierophant or explainer of the mysteries, makes Divine truth manifest to the neophyte, who had been hitherto in intellectual darkness, and reveals the hidden or esoteric lessons of initiation.

Sun of Mercy, Society of the. Of this Society little is known, but Antoine Joseph Pernetty, the presumed author of the Twenty-eighth Degree, A. A. Scottish Rite, became a devotee to it, and induced Swedenborg to become a member. Its central point appears to have been Avignon and Montpellier; and its nature Hermetic.

Sun, Knight of the. See *Knight of the Sun.*

Sun, Moon, and Stars. The plates prefixed to the *Hieroglyphic Chart* of Jeremy Cross contain a page on which are delineated a sun, moon, seven stars, and a comet, which has been copied into the later illustrated editions of Webb's *Monitor*, and is now to be found in all the modern Masters' carpets. In the connection in which they are there placed they have no symbolic meaning, although many have erroneously considered that they have. The sun and moon are not symbols in the Third, but only in the First Degree; the stars are a symbol in the high degrees, and the comet is no symbol at all. They are simply mnemonic in character, and intended to impress on the memory, by a pictured representation of the object, a passage in the Webb lectures taken from the Prestonian, which is in these words: "The All-seeing Eye, whom the sun, moon, and stars obey, and under whose watchful care even comets perform their stupendous revolutions, pervades the inmost recesses of the human heart, and will reward us according to our merits." It would have been more creditable to the symbolic learning of Cross, if he had omitted these plates from his collection of Masonic symbols. At least the too common error of mistaking them for symbols in the Third Degree would have been avoided.

Sun-Worship. Sir William Jones has remarked that two of the principal sources of mythology were a wild admiration of the heavenly bodies, particularly the sun, and an inordinate respect paid to the memory of powerful, wise, and virtuous ancestors, especially the founders of kingdoms, legislators, and warriors. To the latter cause we may attribute the euhemerism of the Greeks and the shintoism of the Chinese. But in the former we shall find the origin of sun-worship the oldest and by far the most prevalent of all the ancient religions.

Eusebius says that the Phœnicians and the Egyptians were the first who ascribed divinity to the sun. But long—very long—before these ancient peoples the primeval race of Aryans worshiped the solar orb in his various manifestations as the producer of light. "In the Veda," says a native commentator, "there are only three deities: Surya in heaven, Indra in the sky, and Agni on the earth." But Surya, Indra, Agni are but manifestations of God in the sun, the bright sky, and the fire derived from the solar light. In the profoundly poetic ideas of the Vedic hymns we find perpetual allusion to the sun with his life-bestowing rays. Everywhere in the East, amidst its brilliant skies, the sun claimed, as the glorious manifestation of Deity, the adoration of those primitive peoples. The Persians, the Assyrians, the Chaldeans—all worshiped the sun. The Greeks, a more intellectual people, gave a poetic form to the grosser idea, and adored Apollo or Dionysius as the sun-god.

Sun-worship was introduced into the mysteries not as a material idolatry, but as the means of expressing an idea of restoration to life from death, drawn from the daily reappearance in the east of the solar orb after its nightly disappearance in the west. To the sun, too, as the regenerator or revivifier of all things, is the Phallic worship, which made a prominent part of the mysteries, to be attributed. From the Mithraic initiations, in which sun-worship played so important a part, the Gnostics derived many of their symbols. These, again, exercised their influence upon the Medieval Freemasons. Thus it is that the sun has become so prominent in the Masonic system; not, of course, as an object of worship, but purely as a symbol, the interpretation of which presents itself in many different ways. (See *Sun.*)

Superexcellent Masons. Dr. Oliver devotes the fifteenth lecture of his *Historical Landmarks* (vol. i., pp. 401–438) to an essay "On the number and classification of the Workmen at the building of King Solomon's Temple." His statement, based entirely on old lectures and legends, is that there were nine Masons of supereminent ability who were called Superexcellent Masons, and who presided over as many Lodges of Excellent Masons, while the nine Superexcellent Masons formed also a Lodge over which Tito Zadok, Prince of Harodim, presided. In a note on p. 423, he refers to these Superexcellent Masons as being the same as the Most Excellent Masters who constitute the Sixth Degree of the American Rite. The theory advanced by Dr. Oliver is not only entirely unauthenticated by historical evidence of any kind, but also inconsistent with the ritual of that degree. It is, in fact, merely a myth, and not a well-constructed one.

Superexcellent Master. A degree which was originally an honorary or side degree conferred by the Inspectors-General of the Ancient and Accepted Scottish Rite at Charleston. It has since been introduced into some of the Royal and Select Councils of the United States,

and there conferred as an additional degree. This innovation on the regular series of Cryptic degrees, with which it actually has no historical connection, met with great opposition; so that the convention of Royal and Select Masters, which met at New York in June, 1873, resolved to place it in the category of an honorary degree, which might or might not be conferred at the option of a Council, but not as an integral part of the Rite. Although this body had no dogmatic authority, its decision will doubtless have some influence in settling the question. The degree is simply an enlargement of that part of the ceremonies of the Royal Arch which refer to the Temple destruction. To that place it belongs, if it belongs anywhere, but has no more to do with the ideas inculcated in Cryptic Masonry, than have any of the degrees lately invented for modern secret societies.

Whence the degree originally sprang, it is impossible to tell. It could hardly have had its birth on the Continent of Europe; at least, it does not appear to have been known to European writers. Neither Gädicke nor Lenning mention it in their *Encyclopedias;* nor is it found in the catalogue of more than seven hundred degrees given by Thory in his *Acta Latomorum;* nor does Ragon allude to it in his *Tuileur Général,* although he has there given a list of one hundred and fifty-three degrees or modifications of the *Master.* Oliver, it is true, speaks of it, but he evidently derived his knowledge from an American source. It may have been manufactured in America, and possibly by some of those engaged in founding the Scottish Rite. The only Cahier that I ever saw of the original ritual, which is still in my possession, is in the handwriting of Alexander McDonald, a very intelligent and enthusiastic Mason, who was at one time the Grand Commander of the Supreme Council for the Southern Jurisdiction.

The Masonic legend of the degree of Superexcellent Master refers to circumstances which occurred on the last day of the siege of Jerusalem by Nebuzaradan, the captain of the Chaldean army, who had been sent by Nebuchadnezzar to destroy the city and Temple, as a just punishment of the Jewish king Zedekiah for his perfidy and rebellion. It occupies, therefore, precisely that point of time which is embraced in that part of the Royal Arch Degree which represents the destruction of the Temple, and the carrying of the Jews in captivity to Babylon. It is, in fact, an exemplification and extension of that part of the Royal Arch Degree.

As to the symbolic design of the degree, it is very evident that its legend and ceremonies are intended to inculcate that important Masonic virtue—fidelity to vows. Zedekiah, the wicked King of Judah, is, by the modern ritualists who have symbolized the degree, adopted very appropriately as the symbol of perfidy; and the severe but well-deserved punishment which was inflicted on him by the King of Babylon is set forth in the lecture as a great moral lesson, whose object is to warn the recipient of the fatal effects that will ensue from a violation of his sacred obligations.

Superintendent of Works, Grand. An officer of the Grand Lodge of England, who is appointed annually by the Grand Master. He should be well skilled in geometry and architecture. His duty is to advise with the Board of General Purposes on all plans of building or edifices undertaken by the Grand Lodge, and furnish plans and estimates for the same; to superintend their construction, and see that they are conformable to the plans approved by the Grand Master, the Grand Lodge, and the Board of General Purposes; to suggest improvements, and make an annual report on the condition of all the Grand Lodge edifices. The office is not known in the Grand Lodges of this country, but where there is a temple or hall belonging to a Grand Lodge, the duty of attending to it is referred to a hall committee, which, when necessary, engages the services of a professional architect.

Superior. The Sixth and last degree of the German Union of the Twenty-two.

Superiors, Unknown. See *Unknown Superiors.*

Super-Masonic. Ragon (*Orth. Maçon.,* p. 73) calls the high degrees, as being beyond Ancient Craft Masonry, "Grades super Maçonniques."

Supplanting. All the Old Constitutions, without exception, contain a charge against one Fellow supplanting another in his work. Thus, for instance, the third charge in the Harleian MS., No. 2054, says: "Alsoe that noe maister nor fellowe shall subplant others of their worke, that is to say, if they haue taken a worke or stand maister of a Lord's worke, y^{n} shall not put him out of it if he be able of cuning to end the worke." From this we derive the modern doctrine that one Lodge cannot interfere with the work of another, and that a candidate beginning his initiation in a Lodge must finish it in the same Lodge.

Supports of the Lodge. The symbolism connected with the supports of the Lodge is one of the earliest and most extensively prevalent in the Order. The oldest Catechism of the eighteenth century gives it in these words:

"*Q.* What supports your Lodge?

"*A.* Three great Pillars.

"*Q.* What are their names?

"*A.* Wisdom, Strength, and Beauty.

"*Q.* Who doth the Pillar of Wisdom represent?

"*A.* The Master in the East.

"*Q.* Who doth the Pillar of Strength represent?

"*A.* The Senior Warden in the West.

"*Q.* Who doth the Pillar of Beauty represent?

"*A.* The Junior Warden in the South.

"*Q.* Why should the Master represent the Pillar of Wisdom?

"*A.* Because he gives instructions to the Crafts to carry on their work in a proper manner, with good harmony.

"*Q.* Why should the Senior Warden represent the Pillar of Strength?

"*A.* As the Sun sets to finish the day, so the Senior Warden stands in the West to pay the hirelings their wages, which is the strength and support of all business.

"*Q.* Why should the Junior Warden represent the Pillar of Beauty?

"*A.* Because he stands in the South at high twelve at noon, which is the beauty of the day, to call the men off from work to refreshment, and to see that they come on again in due time, that the Master may have pleasure and profit therein.

"*Q.* Why is it said that your Lodge is supported by these three great Pillars—Wisdom, Strength, and Beauty?

"*A.* Because Wisdom, Strength, and Beauty is the finisher of all works, and nothing can be carried on without them.

"*Q.* Why so, Brother?

"*A.* Because there is Wisdom to contrive, Strength to support, and Beauty to adorn."

Preston repeats substantially (but, of course, with an improvement of the language) this lecture; and he adds to it the symbolism of the three orders of architecture of which these pillars are said to be composed. These, he says, are the Tuscan, Doric, and Corinthian. The mistake of enumerating the Tuscan among the ancient orders was corrected by subsequent ritualists. Preston also referred the supports symbolically to the three Ancient Grand Masters. This symbolism was afterward transferred by Webb from the First to the Third Degree.

Webb, in modifying the lecture of Preston, attributed the supports not to the Lodge, but to the Institution; an unnecessary alteration, since the Lodge is but the type of the Institution. His language is: "Our Institution is said to be supported by wisdom, strength, and beauty; because it is necessary that there should be wisdom to contrive, strength to support, and beauty to adorn all great and important undertakings." He follows the ancient reference of the pillars to the three officers, and adopts Preston's symbolism of the three orders of architecture, but he very wisely substitutes the Ionic for the Tuscan. Hemming, in his lectures adopted by the Grand Lodge of England in 1813, retained the symbolism of the pillars, but gave a change in the language. He said: "A Mason's Lodge is supported by three grand pillars. They are called Wisdom, Strength, and Beauty. Wisdom to contrive, Strength to support, and Beauty to adorn. Wisdom to direct us in all our undertakings, Strength to support us in all our difficulties, and Beauty to adorn the inward man."

The French Masons preserve the same symbolism. Bazot (*Manuel*, p. 225) says: "Three great pillars sustain the Lodge. The first, the emblem of wisdom, is represented by the Master who sits in the east, whence light and his commands emanate. The second, the emblem of strength, is represented by the Senior Warden, who sits in the west, where the workmen are paid, whose strength and existence are preserved by the wages which they receive. The third and last pillar is the emblem of beauty; it is represented by the Junior Warden, who sits in the south, because that part typifies the middle of the day, whose beauty is perfect; during this time the workmen repose from work; and it is thence that the Junior Warden sees them return to the Lodge and resume their labors."

The German Masons have also maintained these three pillars in their various rituals. Schröder, the author of the most philosophical one, says: "The universal Lodge, as well as every particular one, is supported by three great invisible columns—Wisdom, Strength, and Beauty; for as every building is planned and fashioned by Wisdom, owes its durability and solidity to Strength, and is made symmetrical and harmonious by Beauty, so ought our spiritual building to be designed by Wisdom, which gives it the firm foundation of Truth, on which the Strength of conviction may build, and self-knowledge complete the structure, and give it permanence and continuance by means of right, justice, and resolute perseverance; and Beauty will finally adorn the edifice with all the social virtues, with brotherly love and union, with benevolence, kindness, and a comprehensive philanthropy."

Stieglitz, in his work *On the Old German Architecture* (i., 239), after complaining that the building principles of the old German artists were lost to us, because, considering them as secrets of the brotherhood, they deemed it unlawful to commit them to writing, yet thinks that enough may be found in the old documents of the Fraternity to sustain the conjecture that these three supports were familiar to the Operative Masons. He says:

"Wisdom, Strength, and Beauty were honored by them as supporting pillars for the perfect accomplishment of the works; and thence they considered them symbolically as essential pillars for the support of the Lodge. Wisdom, which, established on science, gives invention to the artist, and the right arrangement and appropriate disposition of the whole and of all its parts; Strength, which, proceeding from the harmonious balance of all the forces, promotes the secure erection of the building; and Beauty, which, manifested in God's creation of the world, adorns the work and makes it perfect."

I can hardly doubt, from the early appearance of this symbol of the three supports, and from its unchanged form in all countries, that it dates its origin from a period earlier than the revival in 1717, and that it may be traced to the Operative Masons of the Middle Ages, where Stieglitz says it existed.

One thing is clear, that the symbol is not found among those of the Gnostics, and was not familiar to the Rosicrucians; and, therefore, out of the three sources of our symbolism—Gnosticism, Rosicrucianism, and Operative Masonry—it is most probable that it has been derived from the last.

When the high degrees were fabricated, and Christianity began to furnish its symbols and doctrine to the new Masonry, the old Temple

of Solomon was by some of them abandoned, and that other temple adopted to which Christ had referred when he said, "Destroy this temple, and in three days I will raise it up." The old supports of wisdom, strength, and beauty, which had sufficed for the Gothic builders, and which they, borrowing them from the results of their labors on the cathedrals, had applied symbolically to their Lodges, were discarded, and more spiritual supports for a more spiritual temple were to be selected. There had been a new dispensation, and there was to be a new temple. The great doctrine of that new dispensation was to furnish the supporting pillars for the new temple. In these high Christianized degrees we therefore no longer find the columns of Wisdom, Strength, and Beauty, but the spiritual ones of Faith, Hope, and Charity.

But the form of the symbolism is unchanged. The East, the West, and the South are still the spots where we find the new, as we did the old, pillars. Thus the triangle is preserved; for the triangle is the Masonic symbol of God, who is, after all, the true support of the Lodge.

Supreme Authority. The supreme authority in Masonry is that dogmatic power from whose decisions there is no appeal. At the head of every Rite there is a supreme authority which controls and directs the acts of all subordinate bodies of the Rite. In the United States, and in the American Rite which is there practised, it would, at the first glance, appear that the supreme authority is divided. That of symbolic Lodges is vested in Grand Lodges, of Royal Arch Chapters in Grand Chapters, of Royal and Select Councils in Grand Councils, and of Commanderies of Knights Templar in the Grand Encampment. And so far as ritualistic questions and matters of internal arrangement are concerned, the supreme authority is so divided. But the supreme authority of Masonry in each State is actually vested in the Grand Lodge of that State. It is universally recognized as Masonic law that a Mason expelled or suspended by the Grand Lodge, or by a subordinate Lodge with the approval and confirmation of the Grand Lodge, thereby stands expelled or suspended from Royal Arch, from Cryptic, and from Templar Masonry. The same rules apply to the A. and A. S. Rite. Nor can he be permitted to visit any of the bodies in either of these divisions of the Rite so long as he remains under the ban of expulsion of the Grand Lodge. So the status or condition of every Mason in the jurisdiction is controlled by the Grand Lodge, from whose action on that subject there is no appeal. The Masonic life and death of every member of the Craft, in every class of the Order, is in its hands, and thus the Grand Lodge becomes the real supreme authority of the jurisdiction.

Supreme Commander of the Stars. (*Suprême Commandeur des Astres.*) A degree said to have been invented at Geneva in 1779, and found in the collection of M. A. Viany.

Supreme Consistory. (*Suprême Consistoire.*) The title of some of the highest bodies in the Rite of Mizraim. In the original construction of the Rite at Naples the members of the Ninetieth Degree met in a Supreme Consistory. When the Bederides took charge of the Rite they changed the title of the governing body to Supreme Council.

Supreme Council. The Supreme Masonic authority of the Ancient and Accepted Scottish Rite is called a Supreme Council. A Supreme Council claims to derive the authority for its existence from the Constitutions of 1786.* I have no intention here of entering into the question of the authenticity of that document. The question is open to the historian, and has been amply discussed, with the natural result of contradictory conclusions. But he who accepts the Ancient and Accepted Scottish Rite as genuine Freemasonry, and owes his obedience as a Mason to its constituted authorities, is compelled to recognize those Constitutions wherever or whenever they may have been enacted as the fundamental law—the constitutional rule of his Rite. To their authority all the Supreme Councils owe their legitimate existence.

Dr. Frederick Dalcho, who, I think, may very properly be considered as the founder in the United States, and therefore in the world, of the Ancient and Accepted Scottish Rite in its present form as the legitimate successor of the Rite of Perfection or of Herodem, has given in the *Circular* written by him, and published December 4, 1802, by the Supreme Council at Charleston, the following account of the establishment of Supreme Councils:

"On the 1st of May, 1786, the Grand Constitution of the thirty-third degree, called the Supreme Council of Sovereign Grand Inspectors General, was finally ratified by his Majesty the King of Prussia, who, as Grand Commander of the Order of Prince of the Royal Secret, possessed the Sovereign Masonic power over all the Craft. In the new Constitution, this high power was conferred on a Supreme Council of nine brethren in each nation, who possess all the Masonic prerogatives, in their own district, that his Majesty individually possessed, and are *Sovereigns of Masonry.*"

The law for the establishment of a Supreme Council is found in the following words in the Latin Constitutions of 1786: "The first degree will be subordinated to the second, that to the third, and so in order to the sublime, Thirty-third, and last, which will watch over all the others, will correct their errors and will govern them, and whose congregation or convention will be a dogmatic *Supreme Grand Council*, the Defender and Conservator of the Order, which it will govern and administer according to the present Constitutions and those which may hereafter be enacted."

But the Supreme Council at Charleston derived its authority and its information from what are called the French Constitutions; and it is in them that we find the statement

* See *Constitutions of 1786.*

that Frederick invested the Supreme Council with the same prerogatives that he himself possessed, a provision not contained in the Latin Constitutions. The twelfth article says: "The Supreme Council will exercise all the Masonic sovereign powers of which his Majesty Frederick II., King of Prussia, was possessed."*

These Constitutions further declare (Art. 5) that "every Supreme Council is composed of nine Inspectors-General, five of whom should profess the Christian religion." In the same article it is provided that "there shall be only one Council of this degree in each nation or kingdom in Europe, two in the United States of America as far removed as possible the one from the other, one in the English islands of America, and one likewise in the French islands."

It was in compliance with these Constitutions that the Supreme Council at Charleston, South Carolina, was instituted. In the *Circular*, already cited, Dalcho gives this account of its establishment:

"On the 31st of May, 1801, the Supreme Council of the thirty-third degree for the United States of America was opened, with the high honors of Masonry, by Brothers John Mitchell and Frederick Dalcho, Sovereign Grand Inspectors-General; and in the course of the present year, [1802,] the whole number of Grand Inspectors-General was completed, agreeably to the Grand Constitutions."

This was the first Supreme Council of the Ancient and Accepted Scottish Rite ever formed; from it has emanated either directly or indirectly all the other Councils which have been since established in America or Europe; and although it now exercises jurisdiction only over a part of the United States under the title of the Supreme Council for the Southern Jurisdiction of the United States, it claims to be and is recognized as "the Mother Council of the World."

Under its authority a Supreme Council, the second in date, was established by Count de Grasse in the French West Indies, in 1802; a third in France, by the same authority, in 1804; and a fourth in Italy in 1805. In 1813 the Masonic jurisdiction of the United States was divided; the Mother Council establishing at the city of New York a Supreme Council for the Northern Jurisdiction, and over the States north of the Ohio and east of the Mississippi, reserving to itself all the remainder of the territory of the United States. The seat of the Northern Council is now at Boston; and although the offices of the Grand Commander and Secretary-General of the Southern Council are now in the city of Washington, whence its documents emanate, its seat is still constructively at Charleston.

On their first organization, the Supreme Councils were limited to nine members in each. That rule continued to be enforced in the Mother Council until the year 1859, when the number was increased to thirty-three. Similar enlargements have been made in all the other Supreme Councils except that of Scotland, which still retains the original number.

The officers of the original Supreme Council at Charleston were: a Most Puissant Sovereign Grand Commander, Most Illustrious Lieutenant Grand Commander, Illustrious Treasurer-General of the Holy Empire, Illustrious Secretary-General of the Holy Empire, Illustrious Grand Master of Ceremonies, and Illustrious Captain of the Guards.

In 1859, with the change of numbers in the membership, there was also made a change in the number and titles of the officers. These now in the Mother Council, according to its present Constitution, are: 1. Sovereign Grand Commander; 2. Lieutenant Grand Commander; 3. Secretary-General of the Holy Empire; 4. Grand Prior; 5. Grand Chancellor; 6. Grand Minister of State; 7. Treasurer-General of the Holy Empire; 8. Grand Auditor; 9. Grand Almoner; 10. Grand Constable; 11. Grand Chamberlain; 12. First Grand Equerry; 13. Second Grand Equerry; 14. Grand Standard-Bearer; 15. Grand Sword-Bearer; 16. Grand Herald. The Secretary-General is properly the seventh officer, but by a decree of the Supreme Council he is made the third officer in rank "while the office continues to be filled by Bro. Albert G. Mackey, the present incumbent, who is the Dean of the Supreme Council." Dr. Mackey held this position until his death.

The officers somewhat vary in other Supreme Councils, but the presiding and recording officers are everywhere a Sovereign Grand Commander and a Secretary-General of the Holy Empire.

Supreme Councils, A. A. Scottish Rite. These Councils are organized in almost every country of the world, a number being under royal patronage, and in many nations are the governing power over all existing Masonry. A synoptical history of all the Supreme Councils that have ever existed, with the manner of their formation in chronological order, is published in the *Proceedings of the Supreme Council for the Northern Masonic Jurisdiction for 1908*. From this article is taken the following list (on p. 742), giving the Supreme Councils which have received general recognition.

The following Supreme Councils have been formed, but have not received formal recognition and the courtesy of an exchange of representation: Florence, Hungary, Luxembourg, Naples, Palermo, Rome, and Turkey. The number of these Supreme Bodies accomplishes 33.

On the 22d of September, 1875, a congress of the various Supreme Councils was convened at Lausanne, Switzerland, to consider such matters as might then and there be submitted for consideration and united action, and be deemed for the general benefit of the Rite.

*This shows the difference in the sources of authority between the A. and A. S. Rite and Symbolic Masonry. The former is monarchical, while the latter is supposed to be democratic. [E. E. C.]

Supreme Council.	Grand Commander.	Orient.	Constituted.
America, N. J. United States	Hon. Barton Smith, 33°	Boston	Aug. 5, 1813
America, S. J. United States	Hon. George F. Moore, 33°	Washington	May 31, 1801

Turkey	S. A. Prince Aziz Hassan Pasha	Constantinople	1908
Uruguay	Hon. Ricardo J. Areco, 33°	Montevideo	1856
Venezuela	Dr. Emilio Conde Flores, 33°		

Much speculation and lack of confidence was the result among many of the invited participants lest they might be committed by uniting in the conference. The Congress, however, was held, and a declaration of principles set forth. There was also stipulated and agreed upon a treaty, involving highly important measures, embraced within twenty-three articles, which was concluded September 22, 1875. "The intimate alliance and confederation of the contracting Masonic powers extended and extends under their auspices to all the subordinates and to all true and faithful Masons of their respective jurisdictions." "Whoever may have illegitimately and irregularly received any Degree of the A. A. Scottish Rite can nowhere enjoy the prerogatives of a Freemason until he has been lawfully healed by the regular Supreme Council of his own country." The confederated powers again recognized and proclaimed as Grand Constitutions of the A. A. Scottish Rite, the constitutions and statutes adopted May 1, 1876, with the modifications and "Tiler" adopted by the Congress of Lausanne, the 22d of September, 1875.

The declaration and articles were signed by representatives of eighteen Supreme Councils, who recognized the territorial jurisdictions of the following Supreme Councils, to wit:

Northern Jur., U. S.	Southern Jur., U. S.
Central America,	England,
Belgium,	Canada,
Chili,	Colon,
Scotland,	U. S. of Colombia,
France,	Greece,
Hungary,	Ireland,
Italy,	Mexico,
Peru,	Portugal,
Argentine Republic,	Switzerland,
Uruguay.	Venezuela.

The same delegates, by virtue of the plenary powers they held, and by which they were justified, promised, for their principals, to maintain and defend with all their power, to preserve, and cause to be observed and respected, not only the territorial jurisdiction of the Confederated Supreme Councils represented in the said Congress at Lausanne, and the parties therein contracting, but also the territorial jurisdiction of the other Supreme Councils named in the foregoing table.

It is not possible to give statistics as to the number of the A. A. Scottish Rite Masons in the world, but calculating those, of whatever degree, who are governed by Supreme Councils in the different nations, it is but reasonable to presume one-half of the entire Fraternity is of that Rite, and as a matter of extensiveness, it is *par excellence* the Universal Rite. In many nations there is no other Rite known, and therein it confers all the degrees of its system, including the first three. Among the English-speaking Masons, it builds its structure upon the York or the American system of three degrees.

In the United States the number of this Rite, enrolled and unenrolled, will approximate one hundred and fifty thousand in the two Jurisdictions. Its organizations are to be found in every prominent city and many towns, and in numerous instances possessing and occupying temples built specially to accommodate its own peculiar forms, elegant of structure and in appointments, and of great financial value.

The progress of this Rite in the last half century has been most remarkable, and its future appears without a cloud.

[C. T. McClenachan.]

Suspension. This is a Masonic punishment, which consists of a temporary deprivation of the rights and privileges of Masonry. It is of two kinds, *definite* and *indefinite;* but the effect of the penalty, for the time that it lasts, is the same in both kinds. The mode in which restoration is effected differs in each.

1. *Definite Suspension.*—By definite suspension is meant a deprivation of the rights and privileges of Masonry for a fixed period of time, which period is always named in the sentence. By the operation of this penalty, a Mason is for the time prohibited from the exercise of all his Masonic privileges. His rights are placed in abeyance, and he can neither visit Lodges, hold Masonic communication, nor receive Masonic relief, during the period for which he has been suspended. Yet his Masonic citizenship is not lost. In this respect suspension may be compared to the Roman punishment of "relegatio," or banishment, which Ovid, who had endured it, describes (*Tristia*, v. 11), with technical correctness, as a penalty which "takes away neither life nor property nor rights of citizens, but only drives away from the country." So by suspension the rights and duties of the Mason are not obliterated, but their exercise only interdicted for the period limited by the sentence, and as soon as this has terminated he at once resumes his former position in the Order, and is reinvested with all his Masonic rights, whether those rights be of a private or of an official nature.

Thus, if an officer of a Lodge has been suspended for three months from all the rights and privileges of Masonry, a suspension of his official functions also takes place. But a suspension from the discharge of the functions of an office is not a deprivation of the office; and therefore, as soon as the three months to which the suspension had been limited have expired, the brother resumes all his rights in the Order and the Lodge, and with them, of course, the office which he had held at the time that the sentence of suspension had been inflicted.

2. *Indefinite Suspension.*—This is a suspension for a period not determined and fixed by the sentence, but to continue during the pleasure of the Lodge. In this respect only does it differ from the preceding punishment. The position of a Mason, under definite or indefinite suspension, is precisely the same as to the exercise of all his rights and privileges, which in both cases remain in abeyance, and restoration in each brings with it a resumption of all the rights and functions, the exercise of which had been interrupted by the sentence of suspension.

Neither definite nor indefinite suspension can be inflicted except after due notification and trial, and then only by a vote of two-thirds of the members present.

Restoration to Masonic rights differs, as I have said, in these two kinds. Restoration from definite suspension may take place either by a vote of the Lodge abridging the time, when two-thirds of the members must concur, or it will terminate by the natural expiration of the period fixed by the sentence, and that without any vote of the Lodge. Thus, if a member is suspended for three months, at the end of the third month his suspension terminates, and he is *ipso facto* restored to all his rights and privileges.

In the case of indefinite suspension, the only method of restoration is by a vote of the Lodge at a regular meeting, two-thirds of those present concurring.

Lastly, it may be observed that, as the suspension of a member suspends his prerogatives, it also suspends his dues. He cannot be expected, in justice, to pay for that which he does not receive, and Lodge dues are simply a compensation made by a member for the enjoyment of the privileges of membership.

Sussex, Duke of. The Duke of Sussex is entitled to a place in Masonic biography, not only because, of all the Grand Masters on record, he held the office the longest—the Duke of Leinster, of Ireland, alone excepted—but also because of his devotion to the Institution, and the zeal with which he cultivated and protected its interests. Augustus Frederick, ninth child and sixth son of George III., King of England, was born January 27, 1773. He was initiated in 1798 at a Lodge in Berlin. In 1805, the honorary rank of a Past Grand Master was conferred on him by the Grand Lodge of England. May 13, 1812, he was appointed Deputy Grand Master; and April 13, 1813, the Prince Regent, afterward George IV., having declined a reelection as Grand Master, the Duke of Sussex was unanimously elected; and in the same year the two rival Grand Lodges of England were united. The Duke was Most Excellent Zerubbabel of the Grand Chapter, and Grand Superintendent of the Grand Conclave of Knights Templars. He never, however, took any interest in the orders of knighthood, to which, indeed, he appears to have had some antipathy. During his long career the Grand Conclave met but once. By annual elections, he retained the office of Grand Master until his death, which took place April 21, 1843, in the seventy-first year of his age, having completed a Masonic administration as head of the English Craft of upward of thirty years.

During that long period, it was impossible that some errors should not have been committed. The Grand Master's conduct in reference to two distinguished Masons, Drs. Crucefix and Oliver, was by no means creditable to his reputation for justice or forbearance. But the general tenor of his life as an upright man and Mason, and his great attachment to the Order, tended to compensate for the few mistakes of his administration. One who had been most bitterly opposed to his course in reference to Brothers Crucefix and Oliver, and had not been sparing of his condemnation, paid, after his death, this tribute to his Masonic virtues and abilities:

"As a Freemason," said the *Freemasons' Quarterly Review* (1843, p. 120), "the Duke of Sussex was the most accomplished craftsman of his day. His knowledge of the mysteries was, as it were, intuitive; his reading on the subject was extensive; his correspondence equally so; and his desire to be introduced to any brother from whose experience he could derive any information had in it a craving that marked his great devotion to the Order."

On the occasion of the presentation of an offering by the Fraternity in 1838, the Duke gave the following account of his Masonic life, which embodies sentiments that are highly honorable to him:

"My duty as your Grand Master is to take care that no political or religious question intrudes itself; and had I thought that, in presenting this tribute, any political feeling had influenced the brethren, I can only say that then the Grand Master would not have been gratified. Our object is unanimity, and we can find a centre of unanimity unknown elsewhere. I recollect twenty-five years ago, at a meeting in many respects similar to the present, a magnificent jewel (by voluntary vote) was presented to the Earl Moira previous to his journey to India. I had the honor to preside, and I remember the powerful and beautiful appeal which that excellent brother made on the occasion. I am now sixty-six years of age—I say this without regret—the true Mason ought to think that the first day of his birth is but a step on his way to the final close of life. When I tell you that I have completed forty years of a Masonic life—there may be older Masons—but that is a pretty good specimen of my attachment to the Order.

"In 1798, I entered Masonry in a Lodge at Berlin, and there I served several offices, and as Warden was a representative of the Lodge in the Grand Lodge of England. I afterwards was acknowledged and received with the usual compliment paid to a member of the Royal Family, by being appointed a Past Grand Warden. I again went abroad for three years, and on my return joined various Lodges, and upon the retirement of the Prince Regent, who became Patron of the Order, I was elected Grand Master. An epoch of considerable interest intervened, and I became charged, in 1813–14, with a most important mission—the union of the two London societies. My most excellent brother, the Duke of Kent, accepted the title of Grand Master of the Atholl Masons, as they were denominated; I was the Grand Master of those called the Prince of Wales's. In three months we carried the union of the two societies, and I had the happiness of presiding over the united Fraternity. This I consider to have been the happiest event of my life. It brought all Masons upon the Level and the Square, and showed the world at large that the differences of common life did not exist in Masonry, and it showed to Masons that by a long pull, a strong pull, and a pull all together, what great good might be effected."

Sweden. Freemasonry was introduced into Sweden in the year 1735, when Count Sparre, who had been initiated in Paris, established a Lodge at Stockholm. Of this Lodge scarcely anything is known, and it probably soon fell into decay. In 1738, King Frederick I. promulgated a decree which interdicted all Masonic meetings under the penalty of death. At the end of seven years the edict was removed, and Masonry became popular. Lodges were publicly recognized, and in 1746 the Masons of Stockholm struck a medal on the occasion of the birth of the Prince Royal, afterward Gustavus III. In 1753, the Swedish Masons laid the foundation of an orphan asylum at Stockholm which was built by the voluntary contributions of the Fraternity, without any assistance from the State. In 1762, King Adolphus Frederick, in a letter to the Grand Master, declared himself the Protector of the Swedish Lodges, and expressed his readiness to become the Chief of Freemasonry in his dominions, and to assist in defraying the expenses of the Order. In 1765, Lord Blayney, Grand Master of England, granted a Deputation to Charles Fullmann, Secretary of the English embassy at Stockholm, as Provincial Grand Master, with the authority to constitute Lodges in Sweden. At the same time, Schubarb, a member of the Rite of Strict Observance, appeared at Stockholm, and endeavored to establish that Rite. He had but little success, as the high degrees had been previously introduced from France.

But this admixture of English, French, and German Masonry occasioned great dissatisfaction, and gave rise, about this time, to the establishment of an independent system known as the Swedish Rite. In 1770, the Illuminated Grand Chapter was established, and the Duke of Sudermania appointed the Vicarius Salomonis. In 1780, the Grand Lodge of Sweden, which for some years had been in abeyance, was revived, and the same Prince elected Grand Master. This act gave an independent and responsible position to Swedish Masonry, and the progress of the Institution in that kingdom has been ever since regular and uninterrupted. On March 22, 1793, Gustavus IV., the King of Sweden, was initiated into Masonry in a Lodge at Stockholm, the Duke of Sudermania, then acting as Regent of the kingdom, presiding as the Grand Master of the Order.

In 1799, on the application of the Duke of Sudermania, a fraternal alliance was consummated between the Grand Lodges of England and Sweden, and mutual representatives appointed.

In 1809, the Duke of Sudermania ascended the throne under the title of Charles XIII. He continued his attachment to the Order, and retained the Grand Mastership. As a singular mark of his esteem for Freemasonry, the king instituted, May 27, 1811, a new order of knighthood, known as the Order of Charles XIII., the members of which were to be selected from Freemasons only. In the Patent of institution the king declared that, in founding the Order, his intention "was not only to excite his subjects to the practice of charity, and to perpetuate the memory of the devotion of the Masonic Order to his person while it was under his protection, but also to give further proofs of his royal benevolence to those whom he had so long embraced and cherished under the name of Freemasons." The Order, besides the princes of the royal family, was to consist of twenty-seven lay, and three ecclesiastical knights, all of whom were to hold equal rank.

The Grand Lodge of Sweden practises the Swedish Rite, and exercises its jurisdiction under the title of the National Grand Lodge of Sweden. It has now 13 St. Andrew's and 27 St. John's Lodges under its jurisdiction. (See *Swedish Rite.*)

Swedenborg. Emanuel Swedenborg, a distinguished theologian of his age, and the founder of a sect which still exists, has been always mythically connected with Freemasonry. The eagerness is indeed extraordinary with which all Masonic writers, German, French, English, and American, have sought to connect the name and labors of the Swedish sage with the Masonic institution, and that, too, without the slightest foundation for such a theory either in his writings, or in any credible memorials of his life.

Findel (*Hist. of F. M.*, p. 329), speaking of the reforms in Swedish Masonry, says: "Most likely Swedenborg, the mystic and visionary, used his influence in bringing about the new system; at all events, he smoothed the way for it." Lenning speaks of the influence of his teachings upon the Swedish system of Freemasonry, although he does not absolutely claim him as a Mason.

Reghellini, in his *Esprit du Dogme de la Franche-Maçonnerie*, writes thus: "Swedenborg made many very learned researches on the subject of the Masonic mysteries. He thought that their doctrines were of the highest antiquity, having emanated from the Egyptians, the Persians, the Magi, the Jews, and the Greeks. He also became the head of a new religion in his effort to reform that of Rome. For this purpose he wrote his *Celestial Jerusalem*, or his Spiritual World:* he mingled with his reform, ideas which were purely Masonic. In this celestial Jerusalem the Word formerly communicated by God to Moses is found; this word is *Jehovah*, lost on earth, but which he invites us to find in Great Tartary, a country still governed, even in our days, by the patriarchs, by which he means allegorically to say that this people most nearly approach to the primitive condition of the perfection of innocence." The same writer, in his *Maçonnerie considerée comme le resultat des religions Egyptienne, Jewe et Chrétienne* (ii., 454), repeatedly speaks of Swedenborg as a Masonic reformer, and sometimes as a Masonic impostor. Ragon also cites Reghellini in his *Orthodoxie Maçonnique* (p. 255), and recognizes Swedenborg as the founder of a Masonic system. Thory, in his *Acta Latomorum*, cites "the system of Swedenborg"; and in fact all the French writers on Masonic ritualism appear to have borrowed their idea of the Swedish theosophist from the statement of Reghellini, and have not hesitiated to rank him among the principal Masonic teachers of his time.

Oliver is the earliest of the English Masonic writers of eminence who has referred to Swedenborg. He, too often careless of the weight of his expressions and facile in the acceptance of authority, speaks of the degrees, the system, and the Masonry of Swedenborg just in the same tone as he would of those of Cagliostro, of Hund, or of Tschoudy.

And, lastly, in America we have a recent writer, Bro. Samuel Beswick, who is evidently a man of ability and of considerable research. He has culminated to the zenith in his assumptions of the Masonic character of Swedenborg. He published at New York, in 1876, a volume entitled, *The Swedenborg Rite and the Great Masonic Leaders of the Eighteenth Century.* In this work, which, outside of its Swedenborgian fancies, contains much interesting matter, he traces the Masonic life of Swedenborg from his initiation, the time and place of which he makes in 1706, in a Scottish Lodge in the town of Lund, in Sweden, which is a fair specimen of the value of his historical statements. But after treating the great Swede as a Masonic reformer, as the founder of a Rite, and as evincing during his whole life a deep interest in Freemasonry, he appears to me to surrender the whole question in the following closing words of his work:

"From the very moment of his initiation, Swedenborg appears to have resolved never to allude to his membership or to his knowledge of Freemasonry, either publicly or privately. He appears to have made up his mind to keep it a profound secret, and to regard it as something which had no relation to his public life.

"We have searched his *Itinerary*, which contains brief references to everything he saw, heard, and read during his travels, for something having relation to his Masonic knowledge, intercourse, correspondence, visits to Lodges, places, or persons; but there is a studied silence, a systematic avoidance of all allusion to it. In his theological works, his *Memorable Relations* speak of almost every sect in Christendom, and of all sorts of organizations, or of individuals belonging thereto. But Masonry is an exception: there is a systematic silence in relation to it."

It is true that he finds in this reticence of Swedenborg the evidence that he was a Mason and interested in Masonry, but others will most probably form a different conclusion. The fact is that Swedenborg never was a Freemason. The reputation of being one, that has been so continuously attributed to him by Masonic writers, is based first upon the assumptions of Reghellini, whose statements in his *Esprit du Dogme* were never questioned nor their truth investigated, as they should have been, but were blindly followed by succeeding writers. Neither Wilkinson, nor Burk, nor White, who wrote his biography—the last the most exhaustively—nor anything in his own voluminous writings, lead us to any such conclusion.

*There is no work written by Swedenborg which bears either of those titles. It is possible that Reghellini alludes either to the *Arcana Cœlestia*, published in 1749–1753, or to the *De Nova Hierosolyma*, published in 1758.

But the second and more important basis on which the theory of a Swedenborgian Masonry has been built is the conduct of some of his own disciples, who, imbued with his religious views, being Masons, carried the spirit of the New Jerusalem doctrines into their Masonic speculations. There was, it is true, a Masonic Rite or System of Swedenborg, but its true history is this:

About that period we find Pernetty working out his schemes of Masonic reform. Pernetty was a theosophist, a Hermetic philosopher, a disciple, to some extent, of Jacob Böhme, that prince of mystics. To such a man, the reveries, the visions, and the spiritual speculations of Swedenborg were peculiarly attractive. He accepted them as an addition to the theosophic views which he already had received. About the year 1760 he established at Avignon his Rite of the Illuminati, in which the reveries of both Böhme and Swedenborg were introduced. In 1783 this system was reformed by the Marquis de Thomé, another Swedenborgian, and out of that reform arose what was called the "Rite of Swedenborg," not because Swedenborg had established it, or had anything directly to do with its establishment, but because it was based on his peculiar theological views, and because its symbolism was borrowed from the ideas he had advanced in the highly symbolical works that he had written. A portion of these degrees, or other degrees much like them, have been called apocalyptic; not because St. John had, any more than Swedenborg, a connection with them, but because their system of initiation is based on the mystical teachings of the Apocalypse; a work which, not less than the theories of the Swede, furnishes abundant food for a system of Masonico-religious symbolism. Benedict Chastanier, also another disciple of Swedenborg, and who was one of the founders of the Avignon Society, carried these views into England, and founded at London a similar Rite, which afterward was changed into a purely religious association under the name of "The Theosophical Society, instituted for the purpose of promoting the Heavenly Doctrines of the New Jerusalem."

In one of his visions, Swedenborg thus describes a palace in the spiritual world which he had visited. From passages such as these which abound in his various treatises, the theosophic Masons concocted those degrees which have been called the Masonry of Swedenborg. To no reader of the passage annexed can its appropriateness as the basis of a system of symbolism fail to be apparent.

"I accordingly entered the temple, which was magnificent, and in the midst of which a woman was represented clothed in purple, holding in her right hand a golden crown piece, and in her left a chain of pearls. The statue and the representation were only *fantastic representations;* for these *infernal spirits,* by closing the interior degree and opening the exterior only, are able at the pleasure of their imagination to represent magnificent objects. Perceiving that they were illusions, I prayed to the Lord. Immediately the interior of my spirit was opened, and I saw, instead of the superb temple, a tottering house, open to the weather from the top to the bottom. In the place of the woman-statue, an image was suspended, having the head of a dragon, the body of a leopard, the feet of a bear, and the mouth of a lion: in short, it was the beast rising out of the sea, as described in the Apocalypse xiii. 2. In the place of a park, *there was a marsh full of frogs,* and I was informed that under this marsh there was a great HEWN STONE, beneath which the WORD was entirely hidden. Afterwards I said to the prelate, *who was the fabricator of these illusions,* 'Is that your temple?' 'Yes,' replied he, 'it is.' Immediately his interior sight was opened like mine, and he saw what I did. 'How now, what do I see?' cried he. I told him that it was the effect of *the celestial light, which discovers the interior quality of everything,* and which taught him at that very moment what faith separated from good works was. While I was speaking, a wind blowing from the *east* destroyed the temple and the image, dried up the marsh, and *discovered the stone under which the Sacred Word was concealed.* A genial warmth, like that of the spring, descended from heaven; and in the place of that temple we saw a tent, the exterior of which was very plain. I looked into the interior of it, and there I saw *the foundation-stone beneath which the Sacred Word was concealed,* ornamented with precious stones, the splendor of which, diffusing itself over the walls of the temple, diversified the colors of the paintings, which represented cherubims. The angels, perceiving me to be filled with admiration, told me that I should see still greater wonders than these. They were then permitted to *open* the *third heaven,* inhabited by the celestial angels, who dwelt in *love.* All on a sudden the splendor of a *light of fire* caused the temple to disappear, and left nothing to be seen but the Lord himself, standing upon the *foundation-stone*—the Lord, who was the Word, such as he showed Himself. (Apocal. i. 13–16.) Holiness immediately filled all the interior of the spirit of the angels, upon which they *made an effort* to prostrate themselves, but the Lord *shut the passage to the light* from the *third* heaven, *opening* the passage to the light of the *second,* which caused the temple to reappear, with the tent in the midst."

Such passages as these might lead one to suppose that Swedenborg was familiar with the system of Masonic ritualism. His complete reticence upon the subject, however, and the whole tenor of his life, his studies, and his habits, assure us that such was not the case; and that if there was really a borrowing of one from the other, and not an accidental coincidence, it was the Freemasons of the high degrees who

borrowed from Swedenborg, and not Swedenborg from them. And if so, we cannot deny that he has unwittingly exercised a powerful influence on Masonry.

Swedenborg, Rite of. The so-called Rite of Swedenborg, the history of whose foundation has been given in the preceding article, consists of six degrees: 1. Apprentice. 2. Fellow-Craft. 3. Master Neophyte. 4. Illuminated Theosophite. 5. Blue Brother. 6. Red Brother. It is said to be still practised by some of the Swedish Lodges, but is elsewhere extinct. Reghellini, in his *Esprit du Dogme*, gives it as consisting of eight degrees; but he has evidently confounded it with the Rite of Martinism, also a theosophic Rite, and the ritualism of which also partakes of a Swedenborgian character.

Swedish Rite. The Swedish Rite was established about the year 1777, and is indebted for its existence to the exertions and influence of King Gustavus III. It is a mixture of the pure Rite of York, the high degrees of the French, the Templarism of the former Strict Observance, and the system of Rosicrucianism. Zinnendorf also had something to do with the formation of the Rite, although his authority was subsequently repudiated by the Swedish Masons. It is a Rite confined exclusively to the kingdom of Sweden, and was really established as a reform or compromise to reconcile the conflicting elements of English, German, and French Masonry that about the middle of the last century convulsed the Masonic atmosphere of Sweden. It consists of twelve degrees, as follows:

1, 2, 3. The three Symbolic degrees, constituting the St. John's Lodge.

4, 5. The Scottish Fellow-Craft and the Scottish Master of St. Andrew. These constitute the Scottish Lodge. The Fifth Degree entitles its members to civil rank in the kingdom.

6. Knight of the East. In this degree, which is apocalyptic, the New Jerusalem and its twelve gates are represented.

7. Knight of the West, or True Templar, Master of the Key. The jewel of this degree, which is a triangle with five red rosettes, refers to the five wounds of the Savior.

8. Knight of the South, or Favorite Brother of St. John. This is a Rosicrucian degree, the ceremony of initiation being derived from that of the Medieval Alchemists.

9. Favorite Brother of St. Andrew. This degree is evidently derived from the Masonry of the Scottish Rite.

10. Member of the Chapter.

11. Dignitary of the Chapter.

12. Vicar of Solomon.

The first nine degrees are under the obedience of the National Grand Lodge of Sweden and Norway, and essentially compose the Rite. The members of the last three are called "Brethren of the Red Cross," and constitute another Masonic authority, styled the "Illuminated Chapter." The Twelfth Degree is simply one of office, and is only held by the king, who is perpetual Grand Master of the Order. No one is admitted to the Eleventh Degree unless he can show four quarterings of nobility.

Switzerland. In 1737 Lord Darnley, Grand Master of England, granted a Deputation for Geneva, in Switzerland, to George Hamilton, Esq., who, in the same year, established a Provincial Grand Lodge at Geneva. Warrants were granted by this body to several Lodges in and around the city of Geneva. Two years afterward, a Lodge, composed principally of Englishmen, was established at Lausanne, under the name of "La Parfaite Union des Etrangers." Findel, on the authority of Mossdorf's edition of Lenning, says that the Warrant for this Lodge was granted by the Duke of Montagu; a statement also made by Thory. This is an error. The Duke of Montagu was Grand Master of the Grand Lodge of England in 1721, and could not, therefore, have granted a Warrant in 1739. The Warrant must have been issued by the Marquis of Carnarvon, who was Grand Master from April, 1738, to May, 1739. In an old list of the Regular Lodges on the registry of England, this Lodge is thus described: "Private Room, Lausanne, in the Canton of Bern, Switzerland, February 2, 1739." Soon after, this Lodge assumed a superintending authority with the title of "Helvetic Roman Directory," and instituted many other Lodges in the Pays de Vaud.

But in Switzerland, as elsewhere, Masonry was at an early period exposed to persecution. In 1738, almost immediately after their institution, the Lodges at Geneva were suppressed by the magistrates. In 1740, so many calumnies had been circulated in the Swiss Cantons against the Order, that the Freemasons published an *Apology for the Order* in *Der Brachmann*, a Zurich journal. It had, however, but little effect, for in 1743 the magistrates of Bern ordered the closing of all the Lodges. This edict was not obeyed; and therefore, on March 3, 1745, another, still more severe, was issued, by which a penalty of one hundred thalers, and forfeiture of his situation, was to be inflicted on every officer of the government who should continue his connection with the Freemasons. To this the Masons replied in a pamphlet entitled *Le Franc-Maçon dans la République*, published simultaneously, in 1746, at Frankfort and Leipsic. In this work they ably defended themselves from all the unjust charges that had been made against them. Notwithstanding that the result of this defense was that the magistrates pushed their opposition no farther, the Lodges in the Pays de Vaud remained suspended for nineteen years. But in 1764 the primitive Lodge at Lausanne was revived, and the revival was gradually followed by the other Lodges. This resumption of labor was, however, but of brief duration. In 1770 the magistrates again interdicted the meetings.

During all this period the Masons of Geneva, under a more liberal government, were un-

interrupted in their labors, and extended their operations into German Switzerland. In 1771 Lodges had been erected in Vevay and Zurich, which, working at first according to the French system, soon afterward adopted the German ritual.

In 1775 the Lodges of the Pays de Vaud were permitted to resume their labors. Formerly, they had worked according to the system of the Grand Lodge of England, whence they had originally derived their Masonry; but this they now abandoned, and adopted the Rite of Strict Observance. In the same year the high degrees of France were introduced into the Lodge at Basle. Both it and the Lodge at Lausanne now assumed higher rank, and took the title of Scottish Directories.

In 1777 a Congress was held at the city of Basle, in which there were representatives from the Strict Observance Lodges of the Pays de Vaud and the English Lodge of Zurich. It was then determined that the Masonry of Switzerland should be divided under two distinct authorities: the one to be called the German Helvetic Directory, with its seat at Zurich; and the other to be called the Scottish Helvetic Roman Directory, whose seat was at Lausanne. This word *Roman*, or more properly Romansh, is the name of one of the four languages spoken in Switzerland. It is a corruption of the Latin, and supposed to have been the colloquial dialect of a large part of the Grisons.

Still there were great dissensions in the Masonry of Switzerland. A clandestine Lodge had been established in 1777, at Lausanne, by one Sidrac, whose influence it was found difficult to check. The Helvetic Roman Directory found it necessary, for this purpose, to enter, in 1779, into a treaty of alliance with the Grand Lodge at Geneva, and the Lodge of Sidrac was then at length dissolved and its members dispersed.

In 1778, the Helvetic Roman Directory published its Constitutions. The Rite it practised was purely philosophic, every Hermetic element having been eliminated. The appointment of the Masters of Lodges, who held office for three years, was vested in the Directory, and, in consequence, men of ability and learning were chosen, and the Craft were skilfully governed.

In November, 1782, the Council of Bern interdicted the meetings of the Lodges and the exercise of Freemasonry. The Helvetic Roman Directory, to give an example of obedience to law, however unjust and oppressive, dissolved its Lodges and discontinued its own meetings. But it provided for a maintenance of its foreign relations, by the appointment of a committee invested with the power of conducting its correspondence and of controlling the foreign Lodges under its obedience.

In the year 1785 there was a conference of the Swiss Lodges at Zurich to take into consideration certain propositions which had been made by the Congress of Paris, held by the Philalethes; but the desire that a similar Congress should be convened at Lausanne met with no favor from the Directorial Committee. The Grand Orient of France began to exert an influence, and many Lodges of Switzerland, among others ten in Geneva, gave their adhesion to that body. The seven other Genevan Lodges which were faithful to the English system organized a Grand Orient of Geneva, and in 1789 formed an alliance with the Grand Lodge of England. About the same time, the Lodges of the Pays de Vaud, which had been suppressed in 1782 by the government of Bern, resumed their vitality.

But the political disturbances consequent on the French Revolution began to exercise their influences in the Cantons. In 1792, the Helvetic Roman Directory suspended work; and its example was followed in 1793 by the Scottish Directory. From 1793 to 1803, Freemasonry was dead in Switzerland, although a few Lodges in Geneva and a German one in Nuremberg continued a sickly existence.

In 1803 Masonry revived, with the restoration of a better order in the political world. A Lodge, *Zur Hoffnung* or *Hope Lodge*, allusive in its name to the opening prospect, was established at Bern under a French Constitution.

With the cession of the Republic of Geneva to France, the Grand Lodge ceased to exist, and all the Lodges were united with the Grand Orient of France. Several Lodges, however, in the Pays de Vaud, whose Constitution had been irregular, united together to form an independent body under the title of the "Grand National Helvetic Orient." Peter Maurice Glaire introduced his modified Scottish Rite of seven degrees, and was at the age of eighty-seven elected its Grand Master for life. Glaire was possessed of great abilities, and had been the friend of Stanislaus, King of Poland, in whose interests he had performed several important missions to Russia, Prussia, Austria, and France. He was much attached to Masonry, and while in Poland had elaborated on the Scottish system the Rite which he subsequently bestowed upon the Helvetic Orient.

It would be tedious and painful to recapitulate all the dissensions and schisms with which the Masonry of Switzerland continued for years to be harassed. In 1820 there were nineteen Lodges, which worked under four different obediences, the Scottish Directory, the Grand Helvetic Roman Orient, the English Provincial Grand Lodge, and the Grand Orient of France. Besides, there were two Lodges of the Rite of Mizraim, which had been introduced by the Brothers Bedarride.

The Masons of Switzerland, weary of these divisions, had been long anxious to build a firm foundation of Masonic unity, and to obliterate forever this state of isolation, where Lodges were proximate in

locality but widely asunder in their Masonic relations.

Many attempts were made, but the rivalries of petty authorities and the intolerance of opinion caused them always to be failures. At length a movement, which was finally crowned with success, was inaugurated by the Lodge *Modestia cum Libertate*, of Zurich. Being about to celebrate the twenty-fifth anniversary of its existence in 1836, it invited the Swiss Lodges of all Rites to be present at the festival. There a proposition for a National Masonic union was made, which met with a favorable response from all who were present. The reunion at this festival had given so much satisfaction that similar meetings were held in 1838 at Bern, in 1840 at Basle, and in 1842 at Locle. The preliminary means for establishing a Confederacy were discussed at these various biennial conventions, and progress slowly but steadily was made toward the accomplishment of that object. In 1842 the task of preparing a draft of a Constitution for a United Grand Lodge was entrusted to Bro. Gysi-Schinz, of Zurich, who so successfully completed it that it gave almost universal satisfaction. Finally, on June 22, 1844, the new Grand Lodge was inaugurated with the title of the "Grand Lodge Alpina," and Bro. J. J. Hottinger was elected the Grand Master. Masonry has since then been in great activity in Switzerland.

Sword. The sword is in chivalry the ensign or symbol of knighthood. Thus Monstrelet says: "The sons of the kings of France are knights at the font of baptism, being regarded as the chiefs of knighthood, and they receive, from the cradle, the sword which is the sign thereof." St. Palaye calls the sword "the most honorable badge of chivalry, and a symbol of the labor the knight was to encounter." No man was considered a knight until the ceremony of presenting him the sword had been performed; and when this weapon was presented, it was accompanied with the declaration that the person receiving it was thereby made a knight. "The lord or knight," says St. Palaye, "on the girding on of the sword, pronounced these or similar words: In the name of God, of St. Michael, and St. George, I make thee a knight."

So important an ensign of knighthood as the sword must have been accompanied with some symbolic meaning, for in the Middle Ages symbolism was referred to on all occasions.

Francisco Redi, an Italian poet of the seventeenth century, gives, in his *Bacco in Toscano*, an account, from a Latin MS., of an investiture with knighthood in the year 1260, which describes the symbolic meaning of all the insignia used on that occasion. Of the sword it says: "Let him be girded with the sword as a sign of security against the devil; and the two edges of the blade signify right and law, that the poor are to be defended from the rich and the weak from the strong."

But there is a still better definition of the symbolism of the sword of knighthood in an old MS. in the library of the London College of Arms to the following effect: "Unto a knight, which is the most honorable office above all other, is given a sword, which is made like unto a crosse for the redemption of mankynde in signifying that like as our Lord God died uppon the crosse for the redemption of mankynde, even so a knight ought to defend the crosse and to overcome and destroie the enemies of the same; and it hath two edges in tokening that with the sword he ought to mayntayne knighthood and justice."

Hence in Masonic Templarism we find that this symbolism has been preserved, and that the sword with which the modern knight is created is said to be endowed with the qualities of justice, fortitude, and mercy.

The charge to a Knights Templar, that he should never draw his sword unless convinced of the justice of the cause in which he is engaged, nor to sheathe it until his enemies were subdued, finds also its origin in the custom of the Middle Ages. Swords were generally manufactured with a legend on the blade. Among the most common of these legends was that used on swords made in Spain, many examples of which are still to be found in modern collections. That legend is: "No me saques sin rason. No me embaines sin honor"; i. e., *Do not draw me without justice. Do not sheathe me without honor.*

So highly was the sword esteemed in the Middle Ages as a part of a knight's equipment, that special names were given to those of the most celebrated heroes, which have been transmitted to us in the ballads and romances of that period. Thus we have among the warriors of Scandinavia,

Foot-breaath,	the sword of	Thoralf Skolinson,
Quern-biter,	"	King Hako,
Balmung,	"	Siegfried,
Angurvardal,	"	Frithiof.

To the first two, Longfellow alludes in the following lines:

"Quern-biter of Hakom the Good,
Wherewith at a stroke he hewed
The millstone through and through,
And Foot-breaath of Thoralf the Strong,
Were neither so broad nor so long
Nor so true."

And among the knights of chivalry we have

Durandal,	the sword of	Orlando,
Balisardo,	"	Ruggiero,
Colado,	"	the Cid,
Aroun-dight,	"	Lancelot du Sac,
Joyeuse,	"	Charlemagne,
Excalibur,	"	King Arthur.

Of the last of these, the well-known legend is, that it was found embedded in a stone as its sheath, on which was an inscription

that it could be drawn only by him who was the rightful heir to the throne of Britain. After two hundred and one of the strongest knights had essayed in vain, it was at once drawn forth by Arthur, who was then proclaimed king by acclamation. On his deathbed, he ordered it to be thrown into a neighboring lake; but as it fell, an arm issued from the waters, and, seizing it by the hilt, waved it thrice, and then it sank never again to appear. There are many other famous swords in these old romances, for the knight invariably gave to his sword, as he did to his horse, a name expressive of its qualities or of the deeds which he expected to accomplish with it.

In Masonry, the use of the sword as a part of the Masonic clothing is confined to the high degrees and the degrees of chivalry, when, of course, it is worn as a part of the insignia of knighthood. In the symbolic degrees its appearance in the Lodge, except as a symbol, is strictly prohibited. The Masonic prints engraved in the last century, when the sword, at least as late as 1780, constituted a part of the dress of every gentleman, show that it was discarded by the members when they entered the Lodge. The official swords of the Tiler and the Pursuivant or Sword-Bearer are the only exceptions. This rule is carried so far, that military men, when visiting a Lodge, are required to divest themselves of their swords, which are to be left in the Tiler's room.

Sword and Trowel. See *Trowel and Sword*.

Sword-Bearer. An officer in a Commandery of Knights Templar. His station is in the west, on the right of the Standard-Bearer, and when the knights are in line, on the right of the second division. His duty is to receive all orders and signals from the Eminent Commander, and see them promptly obeyed. He is, also, to assist in the protection of the banners of the order. His jewel is a triangle and cross swords.

Sword-Bearer, Grand. A subordinate officer, who is found in most Grand Lodges. Anderson says, in the second edition of the *Constitutions* (p. 127), that in 1731 the Duke of Norfolk, being then Grand Master, presented to the Grand Lodge of England "the old trusty sword of Gustavus Adolphus, king of Sweden, that was wore next by his successor in war the brave Bernard, Duke of Sax-Weimar, with both their names on the blade; which the Grand Master had ordered Brother George Moody (the king's sword cutler) to adorn richly with the arms of Norfolk in silver on the scabbard, in order to be the Grand Master's sword of state in future." At the following feast, Bro. Moody was appointed Sword-Bearer; and the office has ever since existed, and is to be found in almost all the Grand Lodges of this country. Anderson further says that, previous to this donation, the Grand Lodge had no sword of state, but used one belonging to a private Lodge. It was borne before the Grand Master by the Master of the Lodge to which it belonged, as appears from the account of the procession in 1730.

The Grand Sword-Bearer should be appointed by the Grand Master, and it is his duty to carry the sword of state immediately in front of that officer in all processions of the Grand Lodge. In Grand Lodges which have not provided for a Grand Sword-Bearer, the duties of the office are usually performed by the Grand Pursuivant.

Sword of State. Among the ancient Romans, on all public occasions, a lictor carried a bundle of rods, sometimes with an ax inserted among them, before the consul or other magistrate as a token of his authority and his power to punish criminals. Hence, most probably, arose the custom in the Middle Ages of carrying a naked sword before kings or chief magistrates. Thus at the election of the Emperor of Germany, the Elector of Saxony, as Arch-Marshal of the Empire, carried a naked sword before the newly elected Emperor. We find the same practise prevailing in England as early certainly as the reign of Henry III., at whose coronation, in 1236, a sword was carried by the Earl of Chester. It was named Curtana, and, being without a point, was said to be emblematic of the spirit of mercy that should actuate a sovereign. This sword is known as the "Sword of State," and the practise prevailing to the present day, it has always been borne in England in public processions before all chief magistrates, from the monarch of the realm to the mayor of the city. The custom was adopted by the Masons; and we learn from Anderson that, from the time of the revival, a sword of state, the property of a private Lodge, was borne by the Master of that Lodge before the Grand Master, until the Grand Lodge acquired one by the liberality of the Duke of Norfolk, which has ever since been borne by the Grand Sword-Bearer.

Sword Pointing to the Naked Heart. Webb says that "the sword pointing to the naked heart demonstrates that justice will, sooner or later, overtake us." The symbol is a modern one; but its adoption was probably suggested by the old ceremony, both in English and in continental Lodges, and which is still preserved in some places, in which the candidate found himself surrounded by swords pointing at his heart, to indicate that punishment would duly follow his violation of his obligations.

Sword, Revolving. With the Cherubim, Yahveh stationed at the gate of Eden, "to keep the way of the tree of Life," the *lahat ha'hereb hammithhappeketh*, "The revolving phenomenon of the curved sword," or "the flaming blade of the sword which turns." There were two Cherubim, one at each side of the gate. These angels, or winged bulls, did not hold the weapon in their hands, but it was apart, separate from them. The *lahat ha'hereb* was endowed with proper motion, or turned upon itself. There was

but one, and presumably it was between the Cherubim, suspended at a certain height in the air. Prof. Lenormant, in speaking of this terrible weapon, states, that "the circumference, which was turned fully upon the spectator, could have been full of eyes all around, and that when the prophet says 'that they had a circumference and a height that were dreadful,' the second dimension refers to the breadth of their rims," and when advancing with the Cherubim against the irreverent intruder at the forbidden gate, it would strike and cut him in pieces as soon as it should graze him. The symbolism of this instrument has been fixed by Obry as the tchakra of India, which is a disk with sharp edges, hollow at the center, which is flung horizontally, after having been whirled around the fingers. "A weapon for slinging, shaped like a disk, moving horizontally with a gyratory motion, like that of a waterspout, having a hollow centre, that the tips of the fingers can pass through, whence seven divergent rays issue toward a circumference, about which are studded fifty sharp points." (See *Cherubim*.)

Sword, Templar's. According to the regulations of the Grand Encampment of the United States, the sword to be worn by the Knights Templar must have a helmet head or pommel, a cross handle, and a metal scabbard. The length from the top of the hilt to the end of the scabbard must be from thirty-four to forty inches.

Sword, Tiler's. In modern times the implement used by the Tiler is a sword of the ordinary form. This is incorrect. Formerly, and indeed up to a comparatively recent period, the Tiler's sword was wavy in shape, and so made in allusion to the "flaming sword which was placed at the east of the garden of Eden, which turned every way to keep the way of the tree of life." It was, of course, without a scabbard, because the Tiler's sword should ever be drawn and ready for the defense of his post.

Sworn Brothers. (*Fratres jurati*.) It was the custom in the Middle Ages for soldiers, and especially knights, when going into battle, to engage each other by reciprocal oaths to share the rewards of victory and to defend each other in the fight. Thus Kennet tells us (*Paroch. Antig.*) that in the commencement of the expedition of William of Normandy into England, Robert de Oiley and Roger de Iverio, "fratres jurati, et per fidem et sacramentum confederati, venerunt ad conquestum Angliæ," i. e., *they came to the conquest of England, as sworn brothers, bound by their faith and an oath.* Consequently, when William allotted them an estate as the reward of their military service, they divided it into equal portions, each taking one.

Syllable. To pronounce the syllables, or only one of the syllables, of a Sacred Word, such as a name of God, was among the Orientalists considered far more reverent than to give to it in all its syllables a full and continuous utterance. Thus the Hebrews reduced the holy name JEHOVAH to the syllable JAH; and the Brahmans, taking the initial letters of the three words which expressed the three attributes of the Supreme Brahma, as Creator, Preserver, and Destroyer, made of it the syllable AUM, which, on account of its awful and sacred meaning, they hesitated to pronounce aloud. To divide a word into syllables, and thus to interrupt the sound, either by pausing or by the alternate pronunciation by two persons, was deemed a mark of reverence.

Symbol. A symbol is defined to be a visible sign with which a spiritual feeling, emotion, or idea is connected. It was in this sense that the early Christians gave the name of symbols to all rites, ceremonies, and outward forms which bore a religious meaning; such, for instance, as the cross, and other pictures and images, and even the sacraments and the sacramental elements. At a still earlier period, the Egyptians communicated the knowledge of their esoteric philosophy in mystic symbols. In fact, man's earliest instruction was by means of symbols. "The first learning of the world," says Stukely, "consisted chiefly of symbols. The wisdom of the Chaldeans, Phœnicians, Egyptians, Jews, of Zoroaster, Sanchoniathon, Pherecydes, Syrus, Pythagoras, Socrates, Plato, of all the ancients that is come to our hand, is symbolic." And the learned Faber remarks that "allegory and personification were peculiarly agreeable to the genius of antiquity, and the simplicity of truth was continually sacrificed at the shrine of poetical decoration."

The word "symbol" is derived from a Greek verb which signifies "to compare one thing with another"; and hence a symbol or emblem, for the two words are often used synonymously in Masonry, is the expression of an idea which is derived from the comparison or contrast of some object with a moral conception or attribute. Thus the plumb is a symbol of rectitude; the level, of equality; the beehive, of industry. The physical qualities of the plumb are compared or contrasted with the moral conception of virtue or rectitude of conduct. The plumb becomes to the Mason, after he has once been taught its symbolic meaning, forever afterward the visible expression of the idea of rectitude, or uprightness of conduct. To study and compare these visible objects—to elicit from them the moral ideas which they are intended to express—is to make onesself acquainted with the Symbolism of Masonry.

The objective character of a symbol, which presents something material to the sight and touch, as explanatory of an internal idea, is best calculated to be grasped by the infant mind, whether the infancy of

the mind be considered *nationally* or *individually*. And hence, in the first ages of the world, in its infancy, all propositions, theological, political, or scientific, were expressed in the form of symbols. Thus the first religions were eminently symbolical, because, as that great philosophical historian, Grote, has remarked, "At a time when language was yet in its infancy, visible symbols were the most vivid means of acting upon the minds of ignorant hearers."

To the man of mature intellect, each letter of the alphabet is the symbol of a certain sound. When we instruct the child in the form and value of these letters, we make the picture of some familiar object the representation of the letter which aids the infantile memory. Thus, when the teacher says, "A was an Archer," the Archer becomes a symbol of the letter A, just as in after-life the letter becomes the symbol of a sound.

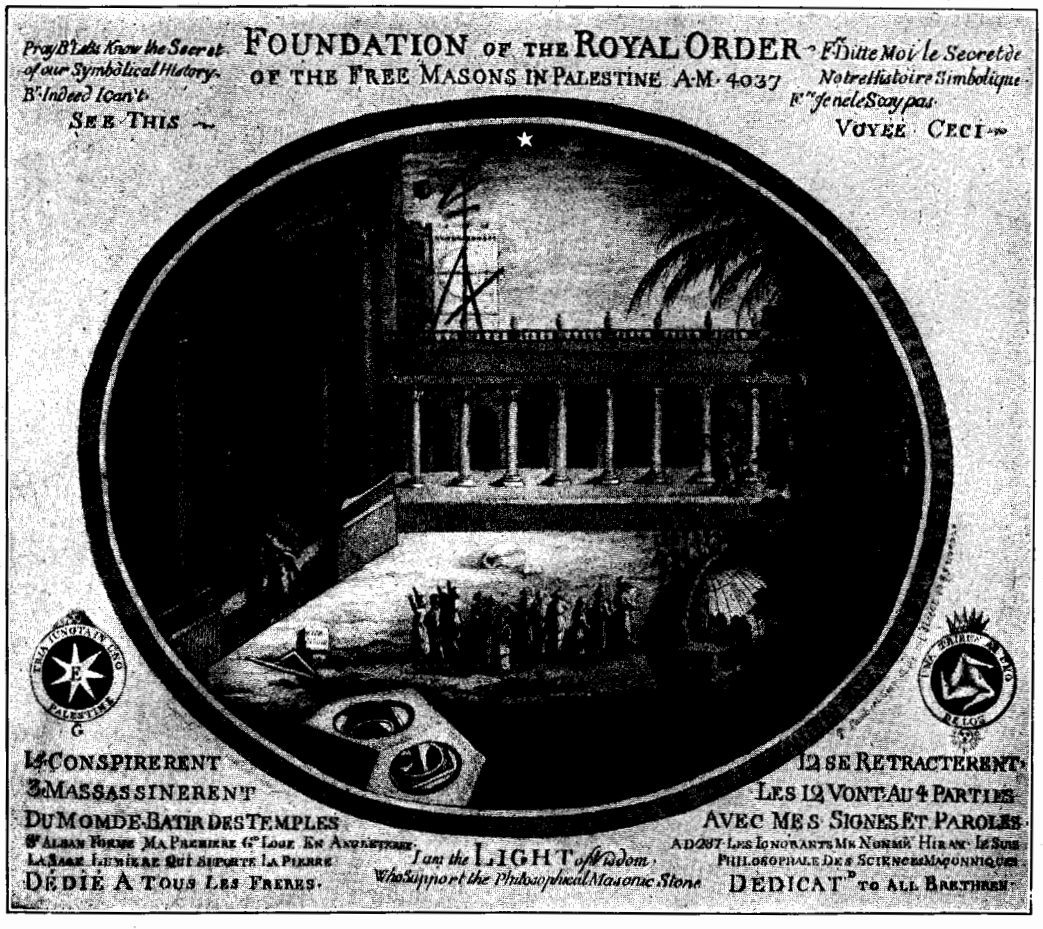
"Symbolical representations of things sacred," says Dr. Barlow (*Essays on Symbolism*, i., p. 1), "were coeval with religion itself as a system of doctrine appealing to sense, and have accompanied its transmission to ourselves from the earliest known period of monumental history.

"Egyptian tombs and stiles exhibit religious symbols still in use among Christians. Similar forms, with corresponding meanings, though under different names, are found among the Indians, and are seen on the monuments of the Assyrians, the Etruscans, and the Greeks.

"The Hebrews borrowed much of their early religious symbolism from the Egyptians, their later from the Babylonians, and through them this symbolical imagery, both verbal and objective, has descended to ourselves.

"The Egyptian priests were great proficients in symbolism, and so were the Chaldeans, and so were Moses and the Prophets, and the Jewish doctors generally —and so were many of the early fathers of the Church, especially the Greek fathers.

"Philo of Alexandria was very learned in symbolism, and the Evangelist St. John has made much use of it.



"The early Christian architects, sculptors, and painters drank deep of symbolical lore, and reproduced it in their works."

Squier gives in his *Serpent Symbolism in America* (p. 19) a similar view of the antiquity and the subsequent growth of the use of symbols. He says: "In the absence of a written language or forms of expression capable of conveying abstract ideas, we can readily comprehend the necessity, among a primitive people, of a symbolic system. That symbolism in a great degree resulted from this necessity is very obvious; and that, associated with man's primitive religious systems, it was afterwards continued, when in the advanced stage of the human mind the previous necessity no longer existed, is equally undoubted. It thus came to constitute a kind of sacred language, and became invested with an esoteric significance understood only by the few."

In Freemasonry, all the instructions in its mysteries are communicated in the form of symbols. Founded, as a speculative science, on an operative art, it has taken the working-tools of the profession which it spiritualizes, the terms of architecture, the Temple of Solomon, and everything that is connected with its traditional history, and adopting them as symbols, it teaches its great moral and philosophical lessons by this system of symbolism. But its symbols are not confined to material objects as were the hieroglyphics of the Egyptians. Its myths and legends are also, for the most part, symbolic. Often a legend, unauthenticated by history, distorted by anachronisms, and possibly absurd in its pretensions if viewed historically or as a narrative of actual occurrences, when interpreted as a symbol, is found to impress the mind with some great spiritual and philosophical truth. The legends of Masonry are parables, and a parable is only a spoken symbol. By its utterance, says Adam Clarke, "spiritual things are better understood, and make a deeper impression on the attentive mind."

Symbol, Compound. In Dr. Mackey's work on the *Symbolism of Freemasonry*, he has given this name to a species of symbol that is not unusual in Freemasonry, where the symbol is to be taken in a double sense, meaning in its general application one thing, and then in a special application another. An example of this is seen in the symbolism of Solomon's Temple, where, in a general sense, the Temple is viewed as a symbol of that spiritual temple formed by the aggregation of the whole Order, and in which each Mason is considered as a stone; and, in an individual or special sense, the same Temple is considered as a type of that spiritual temple which each Mason is directed to erect in his heart.

Symbolic Degrees. The first three degrees of Freemasonry, namely, those of Entered Apprentice, Fellow-Craft, and Master Mason, are known, by way of distinction, as the "symbolic degrees." This term is never applied to the degrees of Mark, Past, and Most Excellent Master, and the Royal Arch, which, as being conferred in a body called a Chapter, are generally designated as "capitular degrees"; nor to those of Royal and Select Master, which, conferred in a Council, are, by an excellent modern usage, styled "cryptic degrees," from the crypt or vault which plays so important a part in their ritual. But the term "symbolic" is exclusively confined to the degrees conferred in a Lodge of the three primitive degrees, which Lodge, therefore, whether opened on the First, the Second or the Third Degree, is always referred to as a "symbolic Lodge." As this distinctive term is of constant and universal use, it may be considered not al-

together useless to inquire into its origin and signification.

The germ and nucleus of all Freemasonry is to be found in the three primitive degrees —the Apprentice, the Fellow-Craft, and the Master Mason. They were at one time (under a modification, however, which included the Royal Arch) the only degrees known to or practised by the Craft, and hence they are often called "Ancient Craft Masonry," to distinguish them from those comparatively modern additions which constitute what are designated as the "high degrees," or, by the French, "*les hautes grades*." The striking peculiarity of these primitive degrees is that their prominent mode of instruction is by symbols. Not that they are without legends. On the contrary, they have each an abundance of legends; such, for instance, as the details of the building of the Temple; of the payment of wages in the middle chamber, or of the construction of the pillars of the porch. But these legends do not perform any very important part in the constitution of the degree. The lessons which are communicated to the candidate in these primitive degrees are conveyed, principally, through the medium of symbols, while there is (at least in the working of the degrees) but little tradition or legendary teaching, with the exception of the great legend of Masonry, the "GOLDEN LEGEND" of the Order, to be found in the Master's Degree, and which is, itself, a symbol of the most abstruse and solemn signification. But even in this instance, interesting as are the details of the legend, they are only subordinate to the symbol. Hiram the Builder is the profound symbol of manhood laboring for immortality, and all the different points of the legend are simply clustered around it, only to throw out the symbol in bolder relief. The legend is of itself inert—it is the symbol of the Master Workman that gives it life and true meaning.

Symbolism is, therefore, the prevailing characteristic of these primitive degrees; and it is because all the science and philosophy and religion of Ancient Craft Masonry is thus concealed from the profane but unfolded to the initiates in symbols, that the first three degrees which comprise it are said to be symbolic.

Now, nothing of this kind is to be found in the degrees above and beyond the third, if we except the Royal Arch, which, however, as I have already intimated, was originally a part of Ancient Craft Masonry, and was unnaturally torn fron the Master's Degree, of which it, as every Masonic student knows, constituted the complement and consummation. Take, for example, the intermediate degrees of the American Chapter, such, for instance, as the Mark and Most Excellent Master. Here we find the symbolic feature ceasing to predominate, and the traditional or legendary taking its place. It is true that in these capitular degrees the use of symbols is not altogether abandoned. This could not well be, for the symbol constitutes the very essence of Freemasonry. The symbolic element is still to be discovered in these degrees, but only in a position subordinate to legendary instruction. As an illustration, let us consider the keystone in the Mark Master's Degree. Now, no one will deny that this is, strictly speaking, a symbol, and a very important and beautiful one, too. It is a symbol of a fraternal covenant between those who are engaged in the common search after Divine truth. But, in the *rôle* which it plays in the ritual of this degree, the symbol, however beautiful and appropriate it may be, is in a manner lost sight of, and the keystone derives almost all its importance and interest from the traditional history of its construction, its architectural design, and its fate. It is as the subject of a legend, and not as a symbol, that it attracts attention. Now, in the Third or Master's Degree we find the trowel, which is a symbol of almost precisely the same import as the keystone. They both refer to a Masonic covenant. But no legend, no tradition, no history, is connected with the trowel. It presents itself simply and exclusively as a symbol. Hence we learn that symbols do not in the capitular, as in the primitive, degrees of Masonry strike the eye, and inform the mind, and teach the heart, in every part of the Lodge, and in every part of the ceremonial initiation. On the contrary, the capitular degrees are almost altogether founded on and composed of a series of events in Masonic history. Each of them has attached to it some tradition or legend which it is the design of the degree to illustrate, and the memory of which is preserved in its ceremonies and instructions. That most of these legends are themselves of symbolic signification is not denied. But this is their interior sense. In their outward and ostensible meaning, they appear before us simply as legends. To retain these legends in the memory of Masons appears to have been the primary design of the establishment of the higher degrees, and as the information intended to be communicated in these degrees is of an historical character, there can of course be but little room for symbols or for symbolic instruction, the profuse use of which would rather tend to an injury than to a benefit, by complicating the purposes of the ritual and confusing the mind of the aspirant.

The celebrated French writer, Ragon, objects to this exclusive application of the term "symbolic" to the first three degrees as a sort of unfavorable criticism on the higher degrees, and as if implying that the latter are entirely devoid of the element of symbolism. But he has mistaken the true import and meaning of the application. It is not because the higher or capitular and cryptic degrees are altogether without symbols—for such is not the case—that the term symbolic is withheld from them, but because symbolic instruction does not constitute their predominating characteristic, as it does of the first three degrees.

And hence the Masonry taught in these

three primitive degrees is very properly called *Symbolic Masonry*, and the Lodge in which this Masonry is taught is known as a *Symbolic Lodge*.

Symbolic Lectures. The lectures appropriated to the First, Second, and Third degrees are sometimes called Symbolic lectures; but the term is more properly applied to any lecture which treats of the meaning of Masonic symbols, in contradistinction to one which discusses only the history of the Order, and which would, therefore, be called an Historical Lecture. But the English Masons have a lecture called "the symbolical lecture," in which is explained the forms, symbols, and ornaments of Royal Arch Masonry, as well as its rites and ceremonies.*

Symbolic Lodge. A Lodge of Master Masons, with the Fellow-Craft and Apprentice Lodge worked under its Constitution, is called a Symbolic Lodge, because in it the Symbolic degrees are conferred. (See *Symbolic Degrees*.)

Symbolic Machinery. Machinery is a term employed in epic and dramatic poetry to denote some agency introduced by the poet to serve some purpose or accomplish some event. Faber, in treating of the Apocalypse, speaks of "a patriarchal scheme of symbolical machinery derived most plainly from the events of the deluge, and borrowed, with the usual perverse misapplication, by the contrivers of paganism, but which has since been reclaimed by Christianity to its proper use." Dr. Oliver thinks that this "scheme of symbolical machinery" was "the primitive Freemasonry, veiled in allegory and illustrated by symbols." Without adopting this questionable hypothesis, it must be admitted that Freemasonry, in the scenic representations sometimes used in its initiations, has, like the epic poets, and dramatists, and the old hierophants, availed itself of the use of symbolic machinery.

Symbolic Masonry. The Masonry that is concerned with the first three degrees in all the Rites. This is the technical meaning. But in a more general sense, Symbolic Masonry is that Masonry, wherever it may be found, whether in the primary or in the high degrees, in which the lessons are communicated by symbols. (See *Symbolic Degrees*.)

Symbolism, The Science of. The science which is engaged in the investigation of the meaning of symbols, and the application of their interpretation to moral, religious, and philosophical instruction. In this sense, Freemasonry is essentially a science of symbolism. The English lectures define Freemasonry to be "a peculiar system of morality veiled in allegory and illustrated by symbols." The definition would be more correct were it in these words: *Freemasonry is a system of morality developed and inculcated by the science of symbolism*. It is this peculiar character as a symbolic institution, this entire adoption of the method of instruction by symbolism, which gives its whole identity to Freemasonry and has caused it to differ from every other association that the ingenuity of man has devised. It is this that has bestowed upon it that attractive form which has always secured the attachment of its disciples and its own perpetuity.

The Roman Catholic Church is, perhaps, the only contemporaneous institution which continues to cultivate, in any degree, the beautiful system of symbolism. But that which, in the Catholic Church, is, in a great measure, incidental, and the fruit of development, is, in Freemasonry, the very life-blood and soul of the Institution, born with it at its birth, or, rather, the germ from which the tree has sprung, and still giving it support, nourishment, and even existence. Withdraw from Freemasonry its Symbolism, and you take from the body its soul, leaving behind nothing but a lifeless mass of effete matter, fitted only for a rapid decay.

Since, then, the science of symbolism forms so important a part of the system of Freemasonry, it will be well to commence any discussion of that subject by an investigation of the nature of symbols in general.

There is no science so ancient as that of symbolism, and no mode of instruction has ever been so general as was the symbolic in former ages. "The first learning in the world," says the great antiquary, Dr. Stukely, "consisted chiefly of symbols. The wisdom of the Chaldeans, Phœnicians, Egyptians, Jews, of Zoroaster, Sanchoniathon, Pherecydes, Syrus, Pythagoras, Socrates, Plato, of all the ancients that is come to our hand, is symbolic." And the learned Faber remarks, that "allegory and personification were peculiarly agreeable to the genius of antiquity, and the simplicity of truth was continually sacrificed at the shrine of poetical decoration."

In fact, man's earliest instruction was by symbols. The objective character of a symbol is best calculated to be grasped by the infant mind, whether the infancy of that mind be considered *nationally* or *individually*. And hence, in the first ages of the world in its infancy, all propositions, theological, political, or scientific, were expressed in the form of symbols. Thus the first religions were eminently symbolical, because, as that great philosophical historian, Grote, has remarked, "At a time when language was yet in its infancy, visible symbols were the most vivid means of acting upon the minds of ignorant hearers."

Even in the very formation of language, the medium of communication between man and man, and which must hence have been an elementary step in the progress of human improvement, it was found necessary to have

*It is unfortunate that the Historical Lecture usually given in the Master's Degree is often absurd from any known historical or Masonic basis. This is misleading to those who have every reason to expect a different treatment at our hands, and efforts should be made to correct this error. [E. E. C.]

recourse to symbols, for words are only and truly certain arbitrary symbols by which and through which we give an utterance to our ideas. The construction of language was, therefore, one of the first products of the science of symbolism.

We must constantly bear in mind this fact of the primary existence and predominance of symbolism in the earliest times, when we are investigating the nature of the ancient religions, with which the history of Freemasonry is so intimately connected. The older the religion, the more the symbolism abounds. Modern religions may convey their dogmas in abstract propositions; ancient religions always conveyed them in symbols. Thus there is more symbolism in the Egyptian religion than in the Jewish, more in the Jewish than in the Christian, more in the Christian than in the Mohammedan, and, lastly, more in the Roman than in the Protestant.

But symbolism is not only the most ancient and general, but it is also the most practically useful, of sciences. We have already seen how actively it operates in the early stages of life and of society. We have seen how the first ideas of men and of nations are impressed upon their minds by means of symbols. It was thus that the ancient peoples were almost wholly educated.

"In the simpler stages of society," says one writer on this subject, "mankind can be instructed in the abstract knowledge of truths only by symbols and parables. Hence we find most heathen religions becoming mythic, or explaining their mysteries by allegories, or instructive incidents. Nay, God himself, knowing the nature of the creatures formed by him, has condescended, in the earlier revelations that he made of himself, to teach by symbols; and the greatest of all teachers instructed the multitudes by parables. The great exemplar of the ancient philosophy and the grand archetype of modern philosophy were alike distinguished by their possessing this faculty in a high degree, and have told us that man was best instructed by similitudes."

Such is the system adopted in Freemasonry for the development and inculcation of the great religious and philosophical truths, of which it was, for so many years, the sole conservator. And it is for this reason that I have already remarked, that any inquiry into the symbolic character of Freemasonry, must be preceded by an investigation of the nature of symbolism in general, if we would properly appreciate its particular use in the organization of the Masonic Institution.

Symbol of Glory. In the old lectures of the last century, the Blazing Star was called "the glory in the centre"; because it was placed in the centre of the floor-cloth or tracing-board, and represented hieroglyphically the glorious name of God. Hence Dr. Oliver has given to one of his most interesting works, which treats of the symbolism of the Blazing Star, the title of *The Symbol of Glory*.

Syndication of Lodges. A term used in France, in 1773, by the Schismatic Grand Orient during its contests with the Grand Lodge, to denote the fusion of several Lodges into one. The word was never introduced into English Masonry, and has become obsolete in France.

Synod of Scotland. In 1757, the Associate Synod of Seceders of Scotland adopted an act, concerning what they called "the Mason oath," in which it is declared, that all persons who shall refuse to make such revelations as the Kirk Sessions may require, and to promise to abstain from all future connection with the Order, "shall be reputed under scandal, and incapable of admission to sealing ordinances." In consequence of this act, passed more than a century ago, the sect of Seceders, of which there are a few in America, continue to be at the present day inveterate enemies of the Masonic Institution.

Syria. A country of Asia Minor lying on the western shores of the Mediterranean. To the Freemason, it is associated with the legendary history of his Order in several interesting points, especially in reference to Mount Lebanon, from whose forests was derived the timber for the construction of the Temple. The modern Templar will view it as the scene of the contests waged during the Crusades by the Christian knights with their Saracen adversaries. In modern Syria, Freemasonry has been slow to find a home. The only Lodges existing in the country are at the city of Beyrout, which contains two—Palestine Lodge, No. 415, which was instituted by the Grand Lodge of Scotland, May 6, 1861, and the Lodge Le Liban, by the Grand Orient of France, January 4, 1869. Morris says (*Freemasonry in the Holy Land*, p. 216) that "the Order of Freemasonry is not in a condition satisfactory to the members thereof, nor creditable to the great cause in which the Fraternity are engaged."

Syrian Rite. A religious sect which had its origin in Syria, and which was anciently comprehended in the patriarchates of Antioch and of Jerusalem. It was an exceedingly flourishing system. Before the end of the fourth century it numbered 119 distinct sees, with a population of several millions. The liturgy is known as the Liturgy of St. James.

System. Lenning defines a system of Freemasonry to be the doctrine of Freemasonry as exhibited in the Lodge government and Lodge work or ritual. The definition is not, perhaps, satisfactory. In Freemasonry, a system is a plan or scheme of doctrines intended to develop a particular view as to the origin, the design, and the character of the Institution. The word is often used as synonymous with Rite, but the two words do not always express the same meaning. A system is not always developed into a Rite, or the same system may give birth to two or more different Rites. Dr. Oliver established a system founded on the literal acceptance of almost all the legendary traditions, but he never invented a Rite. Ramsay and Hund both held the same system as to the Templar origin of Masonry; but the Rite of Ramsay

and the Rite of Strict Observance are very different. The system of Schröder and that of the Grand Lodge of England do not essentially vary, but there is no similarity between the York Rite and the Rite of Schröder. Whoever in Masonry sets forth a connected series of doctrines peculiar to himself invents a system. He may or he may not afterward fabricate a Rite. But the Rite would be only a consequence, and not a necessary one, of the system.

Systyle. An arrangement of columns in which the intercolumniation is equal to the diameter of the column.

T

T. The twentieth letter of the English alphabet, and the twenty-second and last of the Hebrew. As a symbol, it is conspicuous in Masonry. Its numerical value as ט, *Teth*, is 9, but as ת, *Thau*, it is 400. (See *Tau*.)

Tabaor. Toffet. Edom. Three obsolete names which are sometimes given to the three Elect in the Eleventh Degree in the A. A. Scottish Rite.

Tabernacle. Many Masonic students have greatly erred in the way in which they have referred to the Sinaitic tabernacle, as if it were represented by the tabernacle said in the legends to have been erected by Zerubbabel at Jerusalem at the time of the building of the second Temple. The belief that the tabernacle of Zerubbabel was an exact representation of that erected by Moses, arose from the numerous allusions to it in the writings of Oliver, but in this country principally from the teachings of Webb and Cross. It is, however, true, that although the symbols of the ark, the golden candlestick, the altar of incense, and some others were taken, not from the tabernacle, but from the Temple, the symbolism of the veils was derived from the latter, but in a form by no means similar to the original disposition. It is therefore necessary that some notice should be taken of the real tabernacle, that we may be enabled to know how far the Masonic is connected with the Sinaitic edifice.

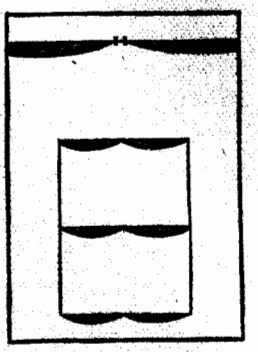
The word *tabernacle* means a tent. It is the diminutive of *taberna*, and was used by the Romans to denote a soldier's tent. It was constructed of planks and covered with skins, and its outward appearance presented the precise form of the Jewish tabernacle. The Jews called it sometimes *mishcan*, which, like the Latin *taberna*, meant a dwelling-place, but more commonly *ohel*, which meant, like *tabernaculum*, a tent. In shape it resembled a tent, and is supposed to have derived its form from the tents used by the patriarchs during their nomadic life.

There are three tabernacles mentioned in Scripture history—the Anti-Sinaitic, the Sinaitic, and the Davidic.

1. The Anti-Sinaitic tabernacle was the tent used, perhaps from the beginning of the exodus, for the transaction of business, and was situated at some distance from the camp. It was used only provisionally, and was superseded by the tabernacle proper.

2. The Sinaitic tabernacle. This was constructed by Aholiab and Bezaleel under the immediate direction of Moses. The costliness and splendor of this edifice exceeded, says Kitto, in proportion to the means of the people who constructed it, the magnificence of any cathedral of the present day. It was situated in the very center of the camp, with its door or entrance facing the east, and was placed toward the western part of an enclosure or outward court, which was one hundred and fifty feet long and fifty feet wide, and surrounded by canvas screens seven and a half feet high, so as to prevent any one on the outside from overlooking the court.

The tabernacle itself was, according to Josephus, forty-five feet long by fifteen wide; its greater length being from east to west. The sides were fifteen feet high, and there was a sloping roof. There was no aperture or place of entrance except at the eastern end, which was covered by curtains. Internally, the tabernacle was divided into two apartments by a richly decorated curtain. The one at the western end was fifteen feet long, making, therefore, a perfect cube. This was the Holy of Holies, into which no one entered, not even the high priest, except on extraordinary occasions. In it was placed the Ark of the Covenant, against the western wall. The Holy of Holies was separated from the Sanctuary by a curtain embroidered with figures of Cherubim, and supported by four golden pillars. The Sanctuary, or eastern apartment, was in the form of a double cube, being fifteen feet high, fifteen feet wide, and thirty feet long. In it were placed the table of shewbread on the northern side, the golden candlestick on the southern, and the altar of incense between them. The tabernacle thus constructed was decorated with rich curtains. These were of four colors—white or fine-twined linen, blue, purple, and red. They



were so suspended as to cover the sides and top of the tabernacle, not being distributed as veils separating it into apartments, as in the Masonic tabernacle. Josephus, in describing the symbolic signification of the tabernacle, says that it was an imitation of the system of the world; the Holy of Holies, into which not even the priests were admitted, was as it were a heaven peculiar to God; but the Sanctuary, where the people were allowed to assemble for worship, represented the sea and land on which men live. But the symbolism of the tabernacle was far more complex than anything that Josephus has said upon the subject would lead us to suppose. Its connection would, however, lead us to an inquiry into the religious life of the ancient Hebrews, and into an investigation of the question how much Moses was, in the appointment of ceremonies, influenced by his previous Egyptian life; topics whose consideration would throw no light on the subject of the Masonic symbolism of the tabernacle.

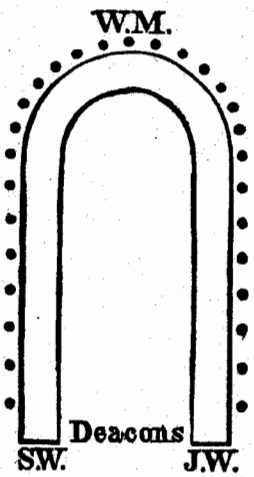
3. The Davidic tabernacle in time took the place of that which had been constructed by Moses. The old or Sinaitic tabernacle accompanied the Israelites in all their wanderings, and was their old temple until David obtained possession of Jerusalem. From that time it remained at Gibeon, and we have no account of its removal thence. But when David removed the ark to Jerusalem, he erected a tabernacle for its reception. Here the priests performed their daily service, until Solomon erected the Temple, when the ark was deposited in the Holy of Holies, and the Davidic tabernacle put away as a relic. At the subsequent destruction of the Temple it was most probably burned. From the time of Solomon we altogether lose sight of the Sinaitic tabernacle, which perhaps became a victim to carelessness and the corroding influence of time.

The three tabernacles just described are the only ones mentioned in Scripture or in Josephus. Masonic tradition, however, enumerates a fourth—the tabernacle erected by Zerubbabel on his arrival at Jerusalem with his countrymen, who had been restored from captivity by Cyrus for the purpose of rebuilding the Temple. Ezra tells us that on their arrival they built the altar of burnt-offerings and offered sacrifice. This would not, however, necessitate the building of a house, because the altar of sacrifices had always been erected in the open court, both of the old tabernacle and Temple. Yet as the priests and Levites were there, and it is said that the religious ordinances of Moses were observed, it is not unlikely that some sort of temporary shelter was erected for the performance of Divine worship. But of the form and character of such a building we have no account.

A Masonic legend has, however, for symbolical purposes, supplied the deficiency. This legend is, however, peculiar to the American modification of the Royal Arch Degree. In the English system a Royal Arch Chapter represents the "ancient Sanhedrim," where Zerubbabel, Haggai, and Joshua administer the law. In the American system a Chapter is said to represent "the tabernacle erected by our ancient brethren near the ruins of King Solomon's Temple."

Of the erection of this tabernacle, I have said that there is no historical evidence. It is simply a myth, but a myth constructed, of course, for a symbolical purpose. In its legendary description, it bears no resemblance whatsoever, except in the colors of its curtains or veils, to the Sinaitic tabernacle. In the latter the Holy of Holies was in the western extremity, in the former it was in the eastern; in that was contained the Ark of the Covenant with the overshadowing Cherubim and the Shekinah; in this there are no such articles; in that the most holy was inaccessible to all persons, even to the priests; in this it is the seat of the three presiding officers, and is readily accessible by proper means. In that the curtains were attached to the sides of the tent; in this they are suspended across, dividing it into four apartments. The Masonic tabernacle used in the American Royal Arch Degree is not, therefore, a representation of the ancient tabernacle erected by Moses in the wilderness, but must be supposed to be simply a temporary construction for purposes of shelter, of consultation, and of worship. It was, in the strictest sense of the word, a tabernacle, a tent. As a myth, with no historical foundation, it would be valueless, were it not that it is used, and was undoubtedly fabricated, for the purpose of developing a symbolism. And this symbolism is found in its veils. There is no harm in calling it a tabernacle any more than there is in calling it a Sanhedrim, provided we do not fall into the error of supposing that either was actually its character. As a myth, and only as a myth, must it be viewed, and there its symbolic meaning presents, as in all other Masonic myths, a fund of useful instruction. For an interpretation of that symbolism, see *Veils, Symbolism of the.*

In some Chapters a part of the furniture is called the tabernacle; in other words, a piece of framework is erected inside of the room, and is called the tabernacle. This is incorrect. According to the ritual, the whole Chapter room represents the tabernacle, and the veils should be suspended from wall to wall. Indeed, I have reasons for believing that this interior tabernacle is an innovation of little more than twenty years' standing. The oldest Chapter rooms that I have seen are constructed on the correct principle.



Tabernacle, Chief of the. See *Chief of the Tabernacle.*

Tabernacle, Prince of the. See *Prince of the Tabernacle.*

Table Lodge. After the labors of the Lodge have been completed, Masons frequently meet at tables to enjoy a repast in common. In England and America, this repast is generally called a banquet, and the Lodge is said to be, during its continuance, at refreshment. The Master, of course, presides, assisted by the Wardens, and it is considered most proper that no profanes should be present. But with these exceptions, there are no rules specially laid down for the government of Masonic banquets. It will be seen, by an inspection of the article *Refreshment* in this work, that during the last century, and even at the commencement of the present, refreshments in English Lodges were taken during the sessions of the Lodge and in the Lodge room, and then, of course, rigid rules were in existence for the government of the Fraternity, and for the regulation of the forms in which the refreshments should be partaken. But this system has long grown obsolete, and the Masonic banquets of the present day differ very little from those of other societies, except, perhaps, in a more strict observance of the rules of order, and in the exclusion of all non-Masonic visitors.

But French Masons have prescribed a very formal system of rules for what they call a "Loge de Table," or *Table Lodge.* The room in which the banquet takes place is as much protected by its isolation from observation as the Lodge room itself. Table Lodges are always held in the Apprentice's Degree, and none but Masons are permitted to be present. Even the attendants are taken from the class known as "Serving Brethren," that is to say, waiters who have received the First Degree for the special purpose of entitling them to be present on such occasions.

The table is in the form of a horseshoe or elongated semicircle. The Master sits at the head, the Senior Warden at the northwest extremity, and the Junior Warden at the southwest. The Deacons or equivalent officers sit between the two Wardens. The brethren are placed around the exterior margin of the table, facing each other; and the void space between the sides is occupied by the serving brethren or attendants. It is probable that the form of the table was really adopted at first from motives of convenience. But M. Hermitte (*Bull. G. O.*, 1869, p. 83) assigns for it a symbolism. He says that as the entire circle represents the year, or the complete revolution of the earth around the sun, the semicircle represents the half of that revolution, or a period of six months, and therefore refers to each the two solstitial points of summer and winter, or the two great festivals of the Order in June and December, when the most important Table Lodges are held.

The Table Lodge is formally opened with an invocation to the Grand Architect. During the banquet, seven toasts are given. These are called "santés d'obligation," or *obligatory toasts.* They are drunk with certain ceremonies which are prescribed by the ritual, and from which no departure is permitted. These toasts are: 1. The health of the Sovereign or Chief Magistrate of the State. 2. That of the Grand Master and the Supreme power of the Order, that is, the Grand Orient or the Grand Lodge. 3. That of the Master of the Lodge; this is offered by the Senior Warden. 4. That of the two Wardens. 5. That of the Visiting Brethren. 6. That of the other officers of the Lodge, and the new initiates or affiliates if there be any. 7. That of all Masons wheresoever spread over the face of the globe. (See *Toasts.*)

Ragon (*Tuill. Gen.*, p. 17) refers these seven toasts of obligation to the seven libations made by the ancients in their banquets in honor of the seven planets, the Sun, Moon, Mars, Mercury, Jupiter, Venus, and Saturn, and the seven days of the week which are named after them; and he assigns some striking reasons for the reference. But this symbolism, although very beautiful, is evidently very modern.

The Table Lodge is then closed with the fraternal kiss, which is passed from the Master around the table, and with the usual forms.

One of the most curious things about these Table Lodges is the vocabulary used. The instant that the Lodge is opened, a change takes place in the names of things, and no person is permitted to call a plate a *plate,* or a knife a *knife,* or anything else by the appellation by which it is known in ordinary conversation. Such a custom formerly prevailed in England, if we may judge from a passage in Dr. Oliver's *Revelations of a Square* (p. 215), where an instance is given of its use in 1780, when the French vocabulary was employed. It would seem, from the same authority, that the custom was introduced into England from France by Capt. George Smith, the author of the *Use and Abuse of Freemasonry,* who was initiated in a continental Lodge.

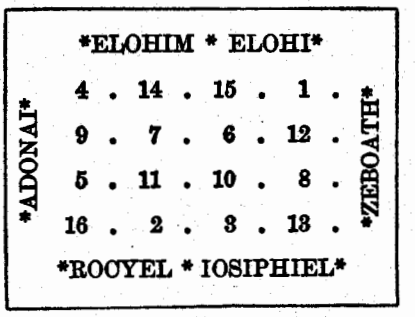
The vocabulary of the Table Lodge as used at French Masonic banquets is as follows:

Table-cloth	they call	standard.
Napkins	"	flags.
Table	"	tracing-board.
Dishes	"	great plates.
Plates	"	tiles.
Spoons	"	trowels.
Knives	"	swords.
Forks	"	pickaxes.
Bottles	"	casks.
Glasses	"	cannons.
Lights	"	stars.

Snuffers	they call	pincers.
Chairs	"	stalls.
Meals	"	materials.
Bread	"	rough ashlar.
Red wine	"	strong red powder.
White wine	"	strong white powder.
Water	"	weak powder.
Beer	"	yellow powder.
Brandy, or liqueurs	"	fulminating powder.
Coffee	"	black powder.
Salt	"	white sand.
Pepper	"	cement.
To eat	"	to masticate.
To drink	"	to fire.
To carve	"	to hew.

Tablets, Engraved. A designation frequently used in the A. A. Scottish Rite for the book of minutes or record; as in the Rose Croix Chapter is used the term "engraved columns."

Tablets of Hiram Abif. Among the traditions of the Order there is a legend referring to the tablets used by Hiram Abif as a Trestle-Board on which to lay down his designs. This legend, of course, can lay no claim to authenticity, but is intended simply as a symbol inculcating the duty of every man to work in the daily labor of life after a design that will construct in his body a spiritual temple. (See *Hiram Abif.*)



Taciturnity. In the earliest catechisms of the last century it is said that "the three particular points that pertain to a Mason are Fraternity, Fidelity, and Taciturnity," and that they "represent Love, Relief, and Truth among all Right Masons." The symbol is now obsolete.

Tactics. The importance that has in the last few years been given to the military element in the Order of Masonic Knights Templar in America has made it necessary that special Manuals should be prepared for the instruction of Knights in the elementary principles of military movements. The most popular works of this kind are: 1. *Knights' Templar, Tactics and Drill for the use of Commanderies, and the Burial Service of the Orders of Masonic Knighthood. Prepared by Sir Orrin Welsh, Past Grand Commander, State of New York;* 2. *Knights' Templar, Tactics and Drill, with the Working, Text, and Burial Service of the Orders of Knighthood, as adopted by the Grand Commandery of the State of Michigan. By Ellery Irving Garfield, E. G. C. G. Grand Commandery of Michigan;* and 3. *Tactics for Knights Templar, and Appendant Orders. Prepared by E. Sir Knight George Wingate Chase, of Massachusetts.* These works contain the necessary instructions in the "school of the knight," or the proper method of marching, halting, saluting, handling the sword, etc., and the "school of the commandery," or directions for properly performing the evolutions on a public parade. Books of this kind have now become as necessary and as common to the Knights Templar as *Monitors* are to the Master Mason.

Talisman. From the Hebrew *tselem* and the Chaldaic *tsalma*, an image or idol. A talisman signifies an implement or instrument, either of wood, or metal, or some precious stone, or even parchment, of various forms, such as a triangle, a cross, a circle, and sometimes a human head or human figure, generally inscribed with characters and constructed with mystical rites and ceremonies. The talisman thus constructed was supposed by the ancients, and even in the Middle Ages, to be invested with supernatural powers and a capacity for protecting its wearer or possessor from evil influences, and for securing to him good fortune and success in his undertakings.

The word *amulet*, from the Latin "amuletum," which comes from the Arabic "hamalet," anything worn, though sometimes confounded with the talisman, has a less general signification. For while the talisman served both to procure good and to avert evil, the powers of the amulet were entirely of a protective nature. Frequently, however, the two words are indifferently used.

The use of talismans was introduced in the Middle Ages from the Gnostics. Of the

Gnostic talismans none were more frequent than those which were inscribed with Divine names. Of these the most common were IAO and SABAO, although we find also the Tetragrammaton, and *Elohim*, *Elohi*, *Adonai*, and other Hebrew appellations of the Deity. Sometimes the talisman contained, not one of the names of God, but that of some mystical person, or the expression of some mystical idea. Thus, on some of the Gnostic talismanic gems, we find the names of the three mythical kings of Cologne, or the sacred *Abraxas*. The orthodox Christians of the early days of the church were necessarily influenced, by the popular belief in talismans, to adopt many of them; although, of course, they sought to divest them of their magical signification, and to use them simply as symbols. Hence we find among these Christians the Constantinian monogram, composed of the letters X and P, or the *vesica piscis*, as a symbol of Christ, and the image of a little fish as a token of Christian recognition, and the anchor as a mark of Christian hope.

Many of the symbols and symbolic expressions which were in use by the alchemists, the astrologers, and by the Rosicrucians, are to be traced to the Gnostic talismans. The talisman was, it is true, converted from an instru-

ment of incantation into a symbol; but the symbol was accompanied with a mystical signification which gave it a sacred character.

It has been said that in the Gnostic talismans the most important element was some one or more of the sacred names of God, derived either from the Hebrews, the Arabians,

or from their own abstruse philosophy; sometimes even in the same talisman from all these sources combined. Thus there is a Gnostic talisman, said by Mr. King to be still current in Germany as an amulet against plague. It consists of a silver plate, on which are inscribed various names of God surrounding a magic square, whose figures computed every way make the number 34.

In this Gnostic talisman, we will observe the presence not only of sacred names, but also of mystical. And it is to the influence of these talismanic forms, developed in the symbols of the secret societies of the Middle Ages, and even in the architectural decorations of the builders of the same period, such as the triangle, the pentalpha, the double triangle, etc., that we are to attribute the prevalence of sacred names and sacred numbers in the symbolic system of Freemasonry.

We do not need a better instance of this transmutation of Gnostic talismans into Masonic symbols, by a gradual transmission through alchemy, Rosicrucianism, and Medieval architecture, than a plate to be found in the *Azoth Philosophorum* of Basil Valentine, the Hermetic philosopher, who flourished in the seventeenth century.

This plate, which is Hermetic in its design, but is full of Masonic symbolism, represents a winged globe inscribed with a triangle within a square, and on it reposes a dragon. On the latter stands a human figure with two hands and two heads, surrounded by the sun, the moon, and five stars representing the seven planets. One of the heads is that of a male, the other of a female. The hand attached to the male part of the figure holds a compass, that to the female, a square. The square and compass thus distributed seem to indicate that originally a phallic meaning was attached to these symbols as there was to the point within the circle, which in this plate also appears in the center of the globe. The compass held by the male figure would represent the male generative principle, and the square held by the female, the female productive principle. The subsequent interpretation given to the combined square and compass was the transmutation from the Hermetic talisman to the Masonic symbol.

Talith. An oblong shawl worn over the head or shoulders, named, from its having four corners, the arba canphoth. It is also called tsitsith, from the fringes on which its holiness depends. The talith is made of wool or camel's hair. The wool fringe is carefully shorn and specially spun. Four threads, one of which must be blue, are passed through eyelet holes made in the four corners. The threads being double make eight. Seven are of equal length; the eighth must twist five times round the rest and be tied into five knots, and yet remain equal in length to the other seven. The five knots and eight threads make thirteen, which, with the value of the Hebrew word tsitsith, 600, accomplishes 613, the number of precepts of the moral law, and which is the number of letters in Hebrew composing the Decalogue. 613 represents 248 positive precepts, or members of the human body, and 365 negative pre-

cepts, or number of human veins. Jesus of Nazareth wore the tsitsith: "And behold a woman . . . came behind him and touched the *hem* of his garment" (Matt. ix. 20); and he rebuked the Pharisees for their ostentation in enlarging the "borders" (κράσπεδα, fringes) of their garments. (Matt. xxiii. 5.)

Taljahad. Rendered in Hebrew thus: טל ויהר, "Angel of Water," and found in the Twenty-ninth Degree of the A. A. Scottish Rite ritual.

Talmud. Hebrew, תלמוד, signifying *doctrine*. The Jews say that Moses received on Mount Sinai not only the written law which is contained in the Pentateuch but an oral law, which was first communicated by him to Aaron, then by them to the seventy elders, and finally by these to the people, and thus transmitted, by memory, from generation to generation. This oral law was never committed to writing until about the beginning of the third century, when Rabbi Jehuda the Holy, finding that there was a possibility of its being lost, from the decrease of students of the law, collected all the traditionary laws into one book, which is called the *Mishna*, a word signifying *repetition*, because it is, as it were, a repetition of the written law.

The Mishna was at once received with great veneration and many wise men among the Jews devoted themselves to its study.

Toward the end of the fourth century, these opinions were collected into a book of commentaries, called the *Gemara*, by the school at Tiberias. This work has been falsely attributed to Rabbi Jochanan; but he died in 279, a hundred years before its composition. The Mishna and its commentary, the Gemara, are, in their collected form, called the *Talmud*.

The Jews in Chaldea, not being satisfied with the interpretations in this work, composed others, which were collected together by Rabbi Ashe into another Gemara. The former work has since been known as the *Jerusalem Talmud*, and that of R. Ashe as the *Babylonian Talmud*, from the places in which they were respectively compiled. In both works the Mishna or law is the same; it is only the Gemara or commentary that is different.

The Jewish scholars place so high a value on the Talmud as to compare the Bible to water, the Mishna to wine, and the Gemara to spiced wine; or the first to salt, the second to pepper, and the third to spices. For a long time after its composition it seemed to absorb all the powers of the Jewish intellect, and the labors of Hebrew writers were confined to treatises and speculations on Talmudical opinions.

The Mishna is divided into six divisions called *Sederim*, whose subjects are: 1. The productions of the earth; 2. Festivals; 3. The rights and duties of women; 4. Damages and injuries; 5. Sacrifices; 6. Purifications. Each of these *Sederim* is again divided into *Massicoth*, or treatises, of which there are altogether sixty-three.

The *Gemara*, which differs in the Jerusalem and Babylonian redactions, consists of commentaries on these *Massicoth*, or treatises.

Of the Talmud, Lightfoot has said that the matters it contains "do everywhere abound with trifles in that manner, as though they had no mind to be read; with obscurities and difficulties, as though they had no mind to be understood; so that the reader has need of patience all along to enable him to bear both trifling in sense and roughness in expression." Stehelin concurs in a similar opinion; but Steinschneider, as learned a Hebraist as either, has expressed a more favorable judgment.

Although the Talmud does indeed contain many passages whose conceits are puerile, it is, nevertheless, extremely serviceable as an elaborate compendium of Jewish customs, and has therefore been much used in the criticism of the Old and New Testaments. It furnishes also many curious illustrations of the Masonic system; and several of the traditions and legends, especially of the higher degrees, are either found in or corroborated by the Talmud. The treatise entitled *Middoth*, for instance, gives us the best description extant of the Temple of Solomon.

Tamarisk. The sacred tree of the Osirian mysteries, classically called the *Erica*, which see.

Tammuz. תמוז. The tenth month of the Hebrew civil year, and corresponding to the months June and July, beginning with the new moon of the former.

Tanga-Tango. A Peruvian triune symbol, signifying "one in three and three in one."

Tannehill, Wilkins. Born in Tennessee, in 1787. He was one of the founders, in 1813, of the Grand Lodge of Tennessee, and was for seven years Grand Master of that body. He was also a contributor to the literature of Masonry, having published in 1845 a *Master Mason's Manual;* which was, however, little more than a compilation from the preceding labors of Preston and Webb. In 1847, he commenced the publication of a Masonic periodical under the title of the *Portfolio*. This was a work of considerable merit, but he was compelled to discontinue it in 1850, in consequence of an attack of amaurosis. One who knew him well, has paid this just tribute to his character: "Simple in feeling as a child, with a heart warm and tender to the infirmities of his brethren, generous even to a fault, he passed through the temptations and trying scenes of an eventful life without a soil upon the purity of his garments." He died June 2, 1858, aged seventy-one years.

Tapis. The name given in German Lodges to the carpet or floor-cloth on which formerly the emblems of Masonry were drawn in chalk. It is also sometimes called the Teppich.

Tarsel. In the earliest catechisms of the eighteenth century, it is said that the furniture of a Lodge consists of a "Mosaic Pavement, Blazing Star, and Indented Tarsel." In more modern catechisms, the expression is "indented tessel," which is incorrectly defined to mean a "tessellated border." *Indented Tarsel* is evidently a corruption of *indented tassel;* for a definition of which see *Tessellated Border*.

Tarsel-Board. We meet with this expression in some of the old catechisms as a corruption of *Trestle-Board*.

Tarshatha. Used in the degree of Knight of the East in the Ancient and Accepted Scottish Rite, according to the modern ritual of

the Southern Jurisdiction of the United States, for Tirshatha, and applied to the presiding officer of a Council of Princes of Jerusalem. (See *Tirshatha*.)

Tassels. In the English and French tracing-boards of the First Degree, there are four tassels, one at each angle, which are attached to a cord that surrounds a tracing-board, and which constitutes the true *tessellated border*. These four cords are described as referring to the four principal points, the guttural, pectoral, manual, and pedal, and through them to the four cardinal virtues, temperance, fortitude, prudence, and justice. (See *Tessellated Border*.)

Tasting and Smelling. Of the five senses, hearing, seeing, and feeling only are deemed essential to Masons. Tasting and smelling are therefore not referred to in the ritual, except as making up the sacred number five. Preston says: "Smelling and Tasting are inseparably connected; and it is by the unnatural kind of life which men commonly lead in society that these senses are rendered less fit to perform their natural duties."

Tatnai and Shethar-Boznai. Tatnai was a Persian satrap of the province west of the Euphrates in the time of Darius and Zerubbabel; Shethar-Boznai was an officer under his command. The two united with the Apharsachites in trying to obstruct the building of the second Temple, and in writing a letter to Darius, of which a copy is preserved in Ezra (ch. v.). In this letter they reported that "the house of the great God" in Judea was being builded with great stones, and that the work was going on fast, on the alleged authority of a decree from Cyrus. They requested that search might be made in the rolls' court whether such a decree was ever given, and asked for the king's pleasure in the matter. The decree was found at Ecbatana, and a letter was sent to Tatnai and Shethar-Boznai from Darius, ordering them no more to obstruct, but, on the contrary, to aid the elders of the Jews in rebuilding the Temple by supplying them both with money and with beasts, corn, salt, wine, and oil for the sacrifices. Shethar-Boznai, after the receipt of this decree, offered no further obstruction to the Jews. Their names have been hence introduced into some of the high degrees in Masonry.

Tau. The last letter of the Hebrew alphabet is called *tau*, and it has the power of the Roman T. In its present form ת, in the square character now in use, it has no resemblance to a cross; but in the ancient Hebrew alphabet, its figure ×, or +, was that of a cross. Hence, when it is said, in the vision of Ezekiel (ix. 4), "Go through the midst of the city, and set a mark (in the original, תּ, *tau*) upon the foreheads of the men that sigh and that cry for all the abominations that be done in the midst thereof"—which mark was to distinguish them as persons to be saved, on account of their sorrow for sin, from those who, as idolators, were to be slain—the evident allusion is to a cross. The form of this cross was × or +, a form familiar to the people of that day. But as the Greek letter *tau* subsequently assumed the form which is still preserved in the Roman T, the tau or tau cross was made also to assume the same form; so that the mark tau is now universally recognized in this form, T. This *tau*, *tau cross*, or *tau mark*, was of very universal use as a sacred symbol among the ancients. From the passage of Ezekiel just cited, it is evident that the Hebrews recognized it as a sign of salvation; according to the Talmudists, the symbol was much older than the time of Ezekiel, for they say that when Moses anointed Aaron as the high priest, he marked his forehead with this sign. Speaking of the use of the tau cross in the Old Testament, Didron says (*Christ. Iconog.*, p. 370) that "it saved the youthful Isaac from death, redeemed from destruction an entire people whose houses were marked with that symbol, healed the envenomed bites of those who looked at the serpent raised in the form of a 'tau' upon a pole, and called back the soul into the dead body of the son of that poor widow who had given bread to the prophet."

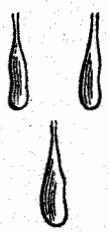
Hence, in Christian iconography, the tau cross, or cross of the Old Testament, is called the anticipatory cross, because it anticipated the four-limbed cross of the passion, and the typical cross because it was its type. It is also called the cross of St. Anthony, because on it that saint is supposed to have suffered martyrdom.

Maurice, in his *Indian Antiquities*, refers to it the *tiluk*, or mark worn by the devotees of Brahma.

Davies, in his *Celtic Researches*, says that the "Gallicum tau," or the tau of the ancient Gauls, was among the Druids a symbol of their supreme god, or Jupiter.

Among the Egyptians, the tau, with an oval ring or handle, became the *crux ansata*, and was used by them as the constant symbol of life. Dr. Clarke says (*Travels*, v., 311) that the tau cross was a monogram of Thoth, "the symbolical or mystical name of hidden wisdom among the ancient Egyptians."

Dupuy, in his *History of the Templars*, says that the tau was a Templar emblem. Von Hammer, who lets no opportunity of maligning the Order escape him, adduces this as a proof of the idolatrous tendencies of the Knights. He explains the tau, which, he says, was inscribed on the forehead of the Baphomet or Templar idol, as a figure of the phallus; whence he comes to the conclusion that the Knights Templar were addicted to the obscene worship of that symbol. It is, however, entirely doubtful, notwithstanding the authority of Dupuy, whether the tau was a symbol of the Templars. But if it was, its origin is rather to be looked for in the supposed Hebrew idea as a symbol of preservation.



It is in this sense, as a symbol of salvation from death and of eternal life, that it has been adopted into the Masonic system, and presents itself, especially under its triple combination, as a badge of Royal Arch Masonry. (See *Triple Tau*.)

Tau Cross. A cross of three limbs, so called because it presents the figure of the Greek letter T. (See *Tau.*)

Tchandalas. Mentioned in the *Institutes* of Manu as a class of pariahs, or the lowest in society, but are referred to as the inventors of brick for building purposes, as is attested by Vina-Snati and Veda Vyasa. In the course of time they were banished from the towns, the rites of burial, and the use of rice, water, and fire. They finally emigrated, and became the progenitors of great nations.

Team. Royal Arch Masons in America apply this word rather inelegantly to designate the three candidates upon whom the degree is conferred at the same time.

Tears. In the Master's Degree in some of the continental Rites, and in all the high degrees where the legend of the degree and the ceremony of reception are intended to express grief, the hangings of the Lodge are black strewn with tears. The figures representing tears are in the form depicted in the annexed cut. The symbolism is borrowed from the science of heraldry, where these figures are called *guttes*, and are defined to be "drops of anything that is by nature liquid or liquefied by art." The heralds have six of these charges, viz., *yellow*, or drops of liquid gold; *white*, or drops of liquid silver; *red*, or drops of blood; *blue*, or drops of tears; *black*, or drops of pitch; and *green*, or drops of oil. In funeral hatchments, a black velvet cloth, sprinkled with these "drops of tears," is placed in front of the house of a deceased nobleman and thrown over his bier; but there, as in Masonry, the *guttes de larmes*, or drops of tears, are not painted blue, but white.

Tebeth. טבת. The fourth month of the Hebrew civil year, corresponding to the months December and January, beginning with the new moon of the former.

Telamones. See *Caryatides.*

Tempelorden or **Tempelherrenorden.** The title in German of the Order of Knights Templar.

Temperance. One of the four cardinal virtues, the practise of which is inculcated in the First Degree. The Mason who properly appreciates the secrets which he has solemnly promised never to reveal, will not, by yielding to the unrestrained call of appetite, permit reason and judgment to lose their seats, and subject himself, by the indulgence in habits of excess, to discover that which should be concealed, and thus merit and receive the scorn and detestation of his brethren. And lest any brother should forget the danger to which he is exposed in the unguarded hours of dissipation, the virtue of temperance is wisely impressed upon his memory, by its reference to one of the most solemn portions of the ceremony of initiation. Some Masons, very properly condemning the vice of intemperance and abhorring its effects, have been unwisely led to confound temperance with total abstinence in a Masonic application, and resolutions have sometimes been proposed in Grand Lodges which declare the use of stimulating liquors in any quantity a Masonic offense. But the law of Masonry authorizes no such regulation. It leaves to every man the indulgence of his own tastes within due limits, and demands not abstinence, but only moderation and temperance, in anything not actually wrong.

Templar. See *Knights Templar.*

Templarius. The Latin title of a Knights Templar. Constantly used in the Middle Ages.

Templar Land. The Order of Knights Templar was dissolved in England, by an act of Parliament, in the seventeenth year of the reign of Edward II., and their possessions transferred to the Order of St. John of Jerusalem, or Knights Hospitalers. Subsequently, in the thirty-second year of the reign of Henry VIII., their possessions were transferred to the king. One of the privileges possessed by the English Templars was that their lands should be free of tithes; and these privileges still adhere to these lands, so that a farm being what is termed "Templar land," is still exempt from the imposition of tithes, if it is occupied by the owner; an exemption which ceases when the farm is worked under a lease.

Templar Origin of Masonry. The theory that Masonry originated in the Holy Land during the Crusades, and was instituted by the Knights Templar, was first advanced by the Chevalier Ramsay, for the purpose, it is supposed, of giving an aristocratic character to the association. It was subsequently adopted by the College of Clermont, and was accepted by the Baron von Hund as the basis upon which he erected his Rite of Strict Observance. The legend of the Clermont College is thus detailed by M. Berage in his work entitled *Les Plus Secrets Mystéres des Hauts Grades* (iii., 194). "The Order of Masonry was instituted by Godfrey de Bouillon, in Palestine in 1330, after the defeat of the Christian armies, and was communicated only to a few of the French Masons, sometime afterwards, as a reward for the services which they had rendered to the English and Scottish Knights. From these latter true Masonry is derived. Their Mother Lodge is situated on the mountain of Heredom, where the first Lodge in Europe was held, which still exists in all its splendor. The Council General is always held there, and it is the seat of the Sovereign Grand Master for the time being. This mountain is situated between the west and the north of Scotland, sixty miles from Edinburgh.

"There are other secrets in Masonry which were never known among the French, and which have no relation to the Apprentice, Fellow Craft, and Master—degrees which were constructed for the general class of Masons. The high degrees, which developed the true design of Masonry and its true secrets, have never been known to them.

"The Saracens having obtained possession of the holy places in Palestine, where all the mysteries of the Order were practised, made use of them for the most profane purposes. The Christians then leagued together to conquer this beautiful country, and to drive these barbarians from the land. They succeeded in obtaining a footing on these shores under the protection of the numerous armies of Crusaders which had been sent there by the Christian princes. The losses which they subsequently experienced put an end to the Christian power, and the Crusaders who remained were subjected to the persecutions of the Saracens, who massacred all who publicly proclaimed the Christian faith. This induced Godfrey de Bouillon, towards the end of the third century, to conceal the mysteries of religion under the veil of figures, emblems, and allegories.

"Hence the Christians selected the Temple of Solomon because it has so close a relation to the Christian Church, of which its holiness and its magnificence make it the true symbol. So the Christians concealed the mystery of the building up of the Church under that of the construction of the Temple, and gave themselves the title of Masons, Architects, or Builders, because they were occupied in building the faith. They assembled under the pretext of making plans of architecture to practise the rites of their religion, with all the emblems and allegories that Masonry could furnish, and thus protect themselves from the cruelty of the Saracens.

"As the mysteries of Masonry were in their principles, and still are only those of the Christian religion, they were extremely scrupulous to confide this important secret only to those whose discretion had been tried, and who had been found worthy. For this purpose they fabricated degrees as a test of those to whom they wished to confide it, and they gave them at first only the symbolic secret of Hiram, on which all the mystery of Blue Masonry is founded, and which is, in fact, the only secret of that Order which has no relation to true Masonry. They explained nothing else to them as they were afraid of being betrayed, and they conferred these degrees as a proper means of recognizing each other, surrounded as they were by barbarians. To succeed more effectually in this, they made use of different signs and words for each degree, so as not only to distinguish themselves from the profane Saracens, but to designate the different degrees. These they fixed at the number of seven, in imitation of the Grand Architect, who built the Universe in six days and rested on the seventh; and also because Solomon was seven years in constructing the Temple, which they had selected as the figurative basis of Masonry. Under the name of Hiram they gave a false application to the Masters, and developed the true secret of Masonry only to the higher degrees."

Such is the theory of the Templar origin of Masonry, which, mythical as it is, and wholly unsupported by the authority of history, has exercised a vast influence in the fabrication of high degrees and the invention of continental Rites. Indeed, of all the systems propounded during the eighteenth century, so fertile in the construction of extravagant systems, none has played so important a part as this in the history of Masonry. Although the theory is no longer maintained, its effects are everywhere seen and felt.

Templars of England. An important change in the organization of Templarism in England and Ireland took place in 1873. By it a union took place of the Grand Conclave of Masonic Knights Templar of England and the Grand Conclave of High Knights Templar of Ireland into one body, under the title of the "Convent General of the United Religious and Military Orders of the Temple and of St. John of Jerusalem, Palestine, Rhodes, and Malta." The following is a summary of the statutes by which the new Order is to be governed, as given by Sir Knight W. J. B. McLeod Moore, Grand Prior, in his circular to the Preceptors of Canada:

"1. The existing Grand Masters in the Empire are to be termed Great Priors, and Grand Conclaves or Encampments, Great Priories, under and subordinate to one Grand Master, as in the early days of the Order, and one Supreme Governing Body, the Convent General.

"2. The term Great is adopted instead of Grand, the latter being a French word; and grand in English is not grand in French. Great is the proper translation of 'Magnus' and 'Magnus Supremus.'

"3. The Great Priories of each nationality—England, Scotland, and Ireland, with their dependencies in the Colonies—retain their internal government and legislation, and appoint their Provincial Priors, doing nothing inconsistent with the supreme statutes of the Convent General.

"4. The title Masonic is not continued; the Order being purely Christian, none but Christians can be admitted; consequently it cannot be considered strictly as a Masonic body: Masonry, while inculcating the highest reverence for the Supreme Being, and the doctrine of the immortality of the soul, does not teach a belief in one particular creed, or unbelief in any. The connection with Masonry is, however, strengthened still more, as a candidate must now be two years a Master Mason, in addition to his qualification as a Royal Arch Mason.

"5. The titles Eminent 'Commander' and 'Encampment' have been discontinued, and the original name 'Preceptor' and 'Preceptory' substituted, as also the titles 'Constable' and 'Marshal' for 'First' and 'Second Captains.' 'Encampment' is a modern term, adopted probably when, as our traditions inform us, 'at the suppression

of the ancient Military Order of the Temple, some of their number sought refuge and held conclaves in the Masonic Society, being independent small bodies, without any governing head.' 'Prior' is the correct and original title for the head of a langue or nationality, and 'Preceptor' for the subordinate bodies. The Preceptories were the ancient 'Houses' of the Templar Order; 'Commander' and 'Commanderies' was the title used by the Order of St. John, commonly known as Knights of Malta.

"6. The title by which the Order is now known is that of 'The United Religious and Military Orders of the Temple and of St. John of Jerusalem, Palestine, Rhodes, and Malta.' The Order of the Temple originally had no connection with that of Malta or Order of St. John; but the combined title appears to have been adopted in commemoration of the union which took place in Scotland with 'The Temple and Hospital of St. John,' when their lands were in common, at the time of the Reformation. But our Order of 'St. John of Jerusalem, Palestine, Rhodes, and Malta,' has no connection with the present Knights of Malta in the Papal States, or of the Protestant branches of the Order, the lineal successors of the ancient Knights of St. John, the sixth or English langue of which is still in existence, and presided over, in London, by His Grace the Duke of Manchester. The Order, when it occupied the Island of Malta as a sovereign body, was totally unconnected with Freemasonry.

"7. Honorary past rank is abolished, substituting the chivalric dignities of 'Grand Crosses' and 'Commanders,' limited in number, and confined to Preceptors. These honors to be conferred by His Royal Highness the Grand Master, the Fountain of Grace and Dignity; and it is contemplated to create an Order of Merit, to be conferred in like manner, as a reward to Knights who have served the Order.

"8. A Preceptor holds a degree as well as rank, and will always retain his rank and privileges as long as he belongs to a Preceptory.

"9. The abolition of honorary past rank is not retrospective, as their rank and privileges are reserved to all those who now enjoy them.

"10. The number of officers entitled to precedence has been reduced to seven; but others may be appointed at discretion, who do not, however, enjoy any precedence.

"11. Equerries, or serving brethren, are not to receive the accolade, or use any but a brown habit, and shall not wear any insignia or jewel: they are to be addressed as 'Frater,' not Sir Knight. In the early days of the Order they were not entitled to the accolade, and, with the esquires and men-at-arms, wore a dark habit, to distinguish them from the Knights, who wore white, to signify that they were bound by their vows to cast away the works of darkness and lead a new life.

"12. The apron is altogether discontinued, and a few immaterial alterations in the insignia will be duly regulated and promulgated: they do not, however, affect the present, but only apply to future, members of the Order. The apron was of recent introduction, to accord with Masonic usage: but reflection will at once show that, as an emblem of care and toil, it is entirely inappropriate to a Military Order, whose badge is the sword. A proposition to confine the wearing of the star to the Preceptors was negatived; the star and ribbon being in fact as much a part of the ritual as of the insignia of the Order.

"13. From the number of instances of persons totally unfitted having obtained admission into the Order, the qualification of candidates has been increased. A declaration is now required, to be signed by every candidate, that he is of the full age of twenty-one years, and in addition to being a Royal Arch Mason, that he is a Master Mason of two years' standing, professing the doctrines of the Holy and Undivided Trinity, and willing to submit to the statutes and ordinances, present and future, of the Order."

Templars of Scotland. The *Statutes of the Grand Priory of the Temple* of Scotland prescribe for the Order of Knights Templar in that kingdom an organization very different from that which prevails in other countries.

"The Religious and Military Order of the Temple" in Scotland consists of two classes: 1. Novice and Esquire; 2. Knight Templar. The Knights are again divided into four classes: 1. Knights created by Priories; 2. Knights elected from the companions on memorial to the Grand Master and Council, supported by the recommendation of the Priories to which they belong; 3. Knights Commanders; 4. Knights Grand Crosses, to be nominated by the Grand Master.

The supreme legislative authority of the Order is the Chapter General, which consists of the Grand Officers, the Knights Grand Crosses, and the Knights Commanders. One Chapter is held annually, at which the Grand Master, if present, acts as President. The anniversary of the death of James de Molay, March 11th, is selected as the time of this meeting, at which the Grand Officers are elected.

During the intervals of the meetings of the Chapter General, the affairs of the Order, with the exception of altering the Statutes, is entrusted to the Grand Master's Council, which consists of the Grand Officers, the Grand Priors of Foreign Langues, and the Knights Grand Crosses.

The Grand Officers, with the exception of the Past Grand Masters, who remain so for life, the Grand Master, who is elected triennially, and the Grand Aides-de-Camp, who are appointed by him and removed at

his pleasure, are elected annually. They are as follows:

Grand Master,
Past Grand Masters,
Grand Seneschal,
Preceptor and Grand Prior of Scotland,
Grand Constable and Mareschal,
Grand Admiral,
Grand Almoner or Hospitaler,
Grand Chancellor,
Grand Treasurer,
Grand Registrar,
Primate or Grand Prelate,
Grand Provost or Governor-General,
Grand Standard-Bearer or Beaucennifer,
Grand Bearer of the Vexillum Belli,
Grand Chamberlain,
Grand Steward,
Two Grand Aides-de-Camp.

A Grand Priory may be instituted by the Chapter General in any nation, colony, or langue, to be placed under the authority of a Grand Prior, who is elected for life, unless superseded by the Chapter General.

A Priory, which is equivalent to our Commanderies, consists of the following officers:

Prior,
Subprior,
Mareschal or Master of Ceremonies,
Hospitaler or Almoner,
Chancellor,
Treasurer,
Secretary,
Chaplain and Instructor,
Beaucennifer, or Bearer of the Beauseant,
Bearer of the Red Cross Banner, or Vexillum Belli,
Chamberlain,
Two Aides-de-Camp.

The Chapter General or Grand Priory may unite two or more Priories into a Commandery, to be governed by a Provincial Commander, who is elected by the Chapter General.

The costume of the Knights, with the exception of a few slight variations to designate difference of rank, is the same as the ancient costume.

Templar Statistics. See *Statistics of the Order of the Temple*.

Temple. The symbolism of Speculative Masonry is so intimately connected with temple building and temple worship, that some notice of these edifices seems necessary. The Hebrews called a temple *beth*, which literally signifies a house or dwelling, and finds its root in a word which signifies "to remain or pass the night," or *hecal*, which means a palace, and comes from an obsolete word signifying "magnificent." So that they seem to have had two ideas in reference to a temple. When they called it *beth Jehovah*, or the "house of Jehovah" they referred to the continued presence of God in it; and when they called it *hecal Jevohah*, or the "palace of Jehovah," they referred to the splendor of the edifice which was selected as his residence. The Hebrew idea was undoubtedly borrowed from the Egyptian, where the same hieroglyphic  I signified both a house and a temple. Thus, from an inscription at Philæ, Champollion (*Dict. Egyptienne*) cites the sentence, "He has made his devotions in the house of his mother Isis."

The classical idea was more abstract and philosophical. The Latin word *templum* comes from a root which signifies "to cut off," thus referring to any space, whether open or occupied by a building, which was cut off, or separated for a sacred purpose, from the surrounding profane ground. The word properly denoted a sacred enclosure where the omens were observed by the augurs. Hence Varro (*De Ling. Lat.*, vi., 81) defines a temple to be "a place for auguries and auspices." As the same practise of worshiping under the sky in open places prevailed among the northern nations, we might deduce from these facts that the temple of the sky was the Aryan idea, and the temple of the house the Semitic. It is true, that afterward, the augurs having for their own convenience erected a tent within the enclosure where they made their observations, or, literally, their *contemplations*, this in time gave rise among the Greeks and the Romans to permanent edifices like those of the Egyptians and the Hebrews.

Masonry has derived its temple symbolism, as it has almost all its symbolic ideas, from the Hebrew type, and thus makes the temple the symbol of a Lodge. But of the Roman temple worship it has not been neglectful, and has borrowed from it one of the most significant and important words in its vocabulary. The Latin word *speculor* means to observe, to look around. When the augur, standing within the sacred precincts of his open temple on the Capitoline hill, watched the flight of birds, that from it he might deduce his auspices of good or bad fortune, he was said, *speculari*, to speculate. Hence the word came at length to denote, like *contemplate* from *templum*, an investigation of sacred things, and thus we got into our technical language the title of "Speculative Masonry," as distinguished by its religious design from Operative or Practical Masonry, which is devoted to more material objects. The EGYPTIAN TEMPLE was the real archetype of the Mosaic tabernacle, as that was of the temple of Jerusalem. The direction of an Egyptian temple was usually from east to west, the entrance being at the east. It was a quadrangular building, much longer than its width, and was situated in the western part of a sacred enclosure. The approach through this enclosure to the temple proper was frequently by a double row of sphinxes. In front of the entrance were a pair of tall obelisks, which will remind the reader of the two pillars at the porch of Solomon's Temple. The temple was divided into a spacious hall, the sanctuary

where the great body of the worshipers assembled. Beyond it, in the western extremity, was the cell or sekos, equivalent to the Jewish Holy of Holies, into which the priests only entered; and in the remotest part, behind a curtain, appeared the image of the god seated on his shrine, or the sacred animal which represented him.

GRECIAN TEMPLES, like the Egyptian and the Hebrew, were placed within an enclosure, which was separated from the profane land around it, in early times, by ropes, but afterward by a wall. The temple was usually quadrangular, although some were circular in form. It was divided into two parts, the πρόναος, porch or vestibule, and the ναος, or cell. In this latter part the statue of the god was placed, surrounded by a balustrade. In temples connected with the mysteries, the cell was called the ἄδυτον (Lat. *adytum*), and to it only the priests and the initiates had access; and we learn from Pausanias that various stories were related of calamities that had befallen persons who had unlawfully ventured to cross the threshold. Vitruvius says that the entrance of Greek temples was always toward the west; but this statement is contradicted by the appearance of the temples still partly existing in Attica, Ionia, and Sicily.

ROMAN TEMPLES, after they emerged from their primitive simplicity, were constructed much upon the model of the Grecian. There were the same vestibule and cells, or adytum, borrowed, as with the Greeks, from the holy and the most holy place of the Egyptians. Vitruvius says that the entrance of a Roman temple was, if possible, to the west, so that the worshipers, when they offered prayers or sacrifices, might look toward the east; but this rule was not always observed.

It thus appears, notwithstanding what Montfaucon (*Antiq.*, ii., l. ii., ch. 2) says to the contrary, that the Egyptian form of a temple was the type from which other nations borrowed their idea.

This Egyptian form of a temple was borrowed by the Jews, and with some modifications adopted by the Greeks and Romans, whence it passed over into modern Europe. The idea of a separation into a holy and a most holy place has everywhere been preserved. The same idea is maintained in the construction of Masonic Lodges, which are but imitations, in spirit, of the ancient temples. But there has been a transposition of parts, the most holy place, which with the Egyptians and the Jews was in the west, being placed in Lodges in the east.

Temple, Grand Commander of the. (*Grand Commandeur du Temple.*) The Fifty-eighth Degree of the collection of the Metropolitan Chapter of France. It is the name of the Knight Commander of the Temple of the Scottish Rite.

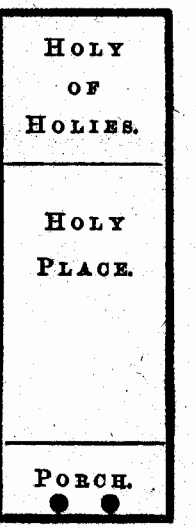
Temple of Ezekiel. An ideal temple seen by the prophet Ezekiel, in the twenty-fifth year of the captivity, while residing in Babylon. It is supposed by Calmet, that the description given by the prophet was that of the Temple of Solomon, which he must have seen before its destruction. But an examination of its admeasurements will show that this could not have been the fact, and that the whole area of Jerusalem would not have been sufficient to contain a building of its magnitude. Yet, as Mr. Ferguson observes (*Smith Dict.*), the description, notwithstanding its ideal character, is curious, as showing what were the aspirations of the Jews in that direction, and how different they were from those of other nations; and also because it influenced Herod to some extent in his restoration of the temple of Zerubbabel. Between the visionary temple of Ezekiel and the symbolic city of the New Jerusalem, as described by the Evangelist, there is a striking resemblance, and hence it finds a place among the symbols in the Apocalyptic degrees. But with Symbolic or with Royal Arch Masonry it has no connection.

Temple of Herod. This was not the construction of a third temple, but only a restoration and extensive enlargement of the second, which had been built by Zerubbabel. To the Christian Mason it is interesting, even more than that of Solomon, because it was the scene of our Lord's ministrations, and was the temple from which the Knights Templar derived their name. It was begun by Herod 7 B.C., finished A.D. 4, and destroyed by the Romans in A.D. 70, having subsisted only seventy-seven years.

Temple of Solomon. The first Temple of the Jews was called *hecal Jehovah* or *beth Jehovah*, the palace or the house of Jehovah, to indicate its splendor and magnificence, and that it was intended to be the perpetual dwelling-place of the Lord. It was King David who first proposed to substitute for the nomadic tabernacle a permanent place of worship for his people; but although he had made the necessary arrangements, and even collected many of the materials, he was not permitted to commence the undertaking, and the execution of the task was left to his son and successor, Solomon.

Accordingly, that monarch laid the foundations of the edifice in the fourth year of his reign, 1012 B.C., and, with the assistance of his friend and ally, Hiram, King of Tyre, completed it in about seven years and a half, dedicating it to the service of the Most High in 1004 B.C. This was the year of the world 3000, according to the Hebrew chronology; and although there has been much difference among chronologists in relation to the precise date, this is the one that has been generally accepted, and it is therefore adopted by Masons in their calculations of different epochs.

The Temple stood on Mount Moriah, one of the eminences of the ridge which was known as Mount Zion, and which was originally the property of Ornan the Jebusite,



who used it as a threshing-floor, and from whom it was purchased by David for the purpose of erecting an altar on it.

The Temple retained its original splendor for only thirty-three years. In the year of the world 3033, Shishak, King of Egypt, having made war upon Rehoboam, King of Judah, took Jerusalem, and carried away the choicest treasures. From that time to the period of its final destruction, the history of the Temple is but a history of alternate spoliations and repairs, of profanations to idolatry and subsequent restorations to the purity of worship. One hundred and thirteen years after the conquest of Shishak, Joash, King of Judah, collected silver for the repairs of the Temple, and restored it to its former condition in the year of the world 3148. In the year 3264, Ahaz, King of Judah, robbed the Temple of its riches, and gave them to Tiglath-Pileser, King of Assyria, who had united with him in a war against the Kings of Israel and Damascus. Ahaz also profaned the Temple by the worship of idols. In 3276, Hezekiah, the son and successor of Ahaz, repaired the portions of the Temple which his father had destroyed, and restored the pure worship. But fifteen years after he was compelled to give the treasures of the Temple as a ransom to Sennacherib, King of Assyria, who had invaded the land of Judah. But Hezekiah is supposed, after his enemy had retired, to have restored the Temple.

Manasseh, the son and successor of Hezekiah, fell away to the worship of Sabianism, and desecrated the Temple in 3306 by setting up altars to the host of heaven. Manasseh was then conquered by the King of Babylon, who in 3328 carried him beyond the Euphrates. But subsequently repenting of his sins he was released from captivity, and having returned to Jerusalem he destroyed the idols, and restored the altar of burnt-offerings. In 3380, Josiah, who was then King of Judah, devoted his efforts to the repairs of the Temple, portions of which had been demolished or neglected by his predecessors, and replaced the ark in the sanctuary. In 3398, in the reign of Jehoiakim, Nebuchadnezzar, King of Chaldea, carried a part of the sacred vessels to Babylon. Seven years afterward, in the reign of Jechoniah, he took away another portion; and finally, in 3416, in the eleventh year of the reign of Zedekiah, he took the city of Jerusalem, and entirely destroyed the Temple, and carried many of the inhabitants captives to Babylon.

The Temple was originally built on a very hard rock, encompassed with frightful precipices. The foundations were laid very deep, with immense labor and expense. It was surrounded with a wall of great height, exceeding in the lowest part four hundred and fifty feet, constructed entirely of white marble.

The body of the Temple was in size much less than many a modern parish church, for its length was but ninety feet, or, including the porch, one hundred and five, and its width but thirty. It was its outer court, its numerous terraces, and the magnificence of its external and internal decorations, together with its elevated position above the surrounding dwellings which produced that splendor of appearance that attracted the admiration of all who beheld it, and gives a color of probability to the legend that tells us how the Queen of Sheba, when it first broke upon her view, exclaimed in admiration, "A most excellent master must have done this!"

The Temple itself, which consisted of the porch, the sanctuary, and the Holy of Holies, was but a small part of the edifice on Mount Moriah. It was surrounded with spacious courts, and the whole structure occupied at least half a mile in circumference. Upon passing through the outer wall, you came to the first court, called the court of the Gentiles, because the Gentiles were admitted into it, but were prohibited from passing farther. It was surrounded by a range of porticoes or cloisters, above which were galleries or apartments, supported by pillars of white marble.

Passing through the court of the Gentiles, you entered the court of the children of Israel, which was separated by a low stone wall, and an ascent of fifteen steps, into two divisions, the outer one being occupied by the women, and the inner by the men. Here the Jews were in the habit of resorting daily for the purposes of prayer.

Within the court of the Israelites, and separated from it by a wall one cubit in height, was the court of the priests. In the center of this court was the altar of burnt-offerings, to which the people brought their oblations and sacrifices, but none but the priests were permitted to enter it.

From this court, twelve steps ascended to the Temple, strictly so called, which, as I have already said, was divided into three parts, the porch, the sanctuary, and the Holy of Holies.

The PORCH of the Temple was twenty cubits in length, and the same in breadth. At its entrance was a gate made entirely of Corinthian brass, the most precious metal known to the ancients. Beside this gate there were the two pillars Jachin and Boaz, which had been constructed by Hiram Abif, the architect whom the King of Tyre had sent to Solomon.

From the porch you entered the SANCTUARY by a portal, which, instead of folding

doors, was furnished with a magnificent veil of many colors, which mystically represented the universe. The breadth of the sanctuary was twenty cubits, and its length forty, or just twice that of the porch and Holy of Holies. It occupied, therefore, one-half of the body of the Temple. In the sanctuary were placed the various utensils necessary for the daily worship of the Temple, such as the altar of incense, on which incense was daily burnt by the officiating priest; the ten golden candlesticks; and the ten tables on which the offerings were laid previous to the sacrifice.

THE HOLY OF HOLIES, or innermost chamber, was separated from the sanctuary by doors of olive, richly sculptured and inlaid with gold, and covered with veils of blue, purple, scarlet, and the finest linen. The size of the Holy of Holies was the same as that of the porch, namely, twenty cubits square. It contained the Ark of the covenant, which had been transferred into it from the tabernacle, with its overshadowing Cherubim and its mercy-seat. Into the most sacred place, the high priest alone could enter, and that only once a year, on the day of atonement.

The Temple, thus constructed, must have been one of the most magnificent structures of the ancient world. For its erection, David had collected more than four thousand millions of dollars, and one hundred and eighty-four thousand six hundred men were engaged in building it for more than seven years; and after its completion it was dedicated by Solomon with solemn prayer and seven days of feasting; during which a peace-offering of twenty thousand oxen and six times that number of sheep was made, to consume which the holy fire came down from heaven.

In Masonry, the Temple of Solomon has played a most important part. Time was when every Masonic writer subscribed with unhesitating faith to the theory that Masonry was there first organized; that there Solomon, Hiram of Tyre, and Hiram Abif presided as Grand Masters over the Lodges which they had established; that there the Symbolic degrees were instituted and systems of initiation were invented; and that from that period to the present Masonry has passed down the stream of Time in unbroken succession and unaltered form. But the modern method of reading Masonic history has swept away this edifice of imagination with as unsparing a hand, and as effectual a power, as those with which the Babylonian king demolished the structure upon which they are founded. No writer who values his reputation as a critical historian would now attempt to defend this theory. Yet it has done its work. During the long period in which the hypothesis was accepted as a fact, its influence was being exerted in molding the Masonic organizations into a form closely connected with all the events and characteristics of the Solomonic Temple. So that now almost all the Symbolism of Freemasonry rests upon or is derived from the "House of the Lord" at Jerusalem. So closely are the two connected, that to attempt to separate the one from the other would be fatal to the further existence of Masonry. Each Lodge is and must be a symbol of the Jewish Temple; each Master in the chair a representative of the Jewish king; and every Mason a personation of the Jewish workman.

Thus must it ever be while Masonry endures. We must receive the myths and legends that connect it with the Temple, not indeed as historic facts, but as allegories; not as events that have really transpired, but as symbols; and must accept these allegories and these symbols for what their inventors really meant that they should be —the foundations of a science of morality.

Temple of Zerubbabel. For the fifty-two years that succeeded the destruction of Jerusalem by Nebuchadnezzar, that city saw nothing but the ruins of its ancient Temple. But in the year of the world 3468 and 536 B.C., Cyrus gave permission to the Jews to return to Jerusalem, and there to rebuild the Temple of the Lord. Forty-two thousand three hundred and sixty of the liberated captives returned under the guidance of Joshua, the High Priest, Zerubbabel, the Prince or Governor, and Haggai, the Scribe, and one year after they laid the foundations of the second Temple. They were, however, much disturbed in their labors by the Samaritans, whose offer to unite with them in the building they had rejected. Artaxerxes, known in profane history as Cambyses, having succeeded Cyrus on the throne of Persia, forbade the Jews to proceed with the work, and the Temple remained in an unfinished state until the death of Artaxerxes and the succession of Darius to the throne. As in early life there had been a great intimacy between this sovereign and Zerubbabel, the latter proceeded to Babylon, and obtained permission from the monarch to resume the labor. Zerubbabel returned to Jerusalem, and notwithstanding some further delays, consequent upon the enmity of the neighboring nations, the second Temple, or, as it may be called by way of distinction from the first, the Temple of Zerubbabel, was completed in the sixth year of the reign of Darius, 515 B.C., and just twenty years after its commencement. It was then dedicated with all the solemnities that accompanied the dedication of the first.

The general plan of this second Temple was similar to that of the first. But it exceeded it in almost every dimension by one-third. The decorations of gold and other ornaments in the first Temple must have far surpassed those bestowed upon the second, for we are told by Josephus (*Antiq.*, xi., 4) that "the Priests and Levites and Elders of families were disconsolate at seeing how much more sumptuous the old Temple was than the one which, on account of their poverty, they had just been able to erect."

The Jews also say that there were five things wanting in the second Temple which had been in the first, namely, the Ark, the Urim and Thummim, the fire from heaven, the Divine presence or cloud of glory, and the spirit of prophecy and power of miracles.

Such are the most important events that relate to the construction of this second Temple. But there is a Masonic legend connected with it which, though it may have no historical foundation, is yet so closely interwoven with the Temple system of Masonry, that it is necessary it should be recounted. It was, says the legend, while the workmen were engaged in making the necessary excavations for laying the foundation, and while numbers continued to arrive at Jerusalem from Babylon, that three worn and weary sojourners, after plodding on foot over the rough and devious roads between the two cities, offered themselves to the Grand Council as willing participants in the labor of erection. Who these sojourners were, we have no historical means of discovering; but there is a Masonic tradition (entitled, perhaps, to but little weight) that they were Hananiah, Mishael, and Azariah, three holy men, who are better known to general readers by their Chaldaic names of Shadrach, Meshach, and Abed-nego, as having been miraculously preserved from the fiery furnace of Nebuchadnezzar.

Their services were accepted, and from their diligent labors resulted that important discovery, the perpetuation and preservation of which constitute the great end and design of the Royal Arch Degree.

As the symbolism of the first or Solomonic Temple is connected with and refers entirely to the Symbolic degrees, so that of the second, or Temple of Zerubbabel, forms the basis of the Royal Arch in the York and American Rites, and of several high degrees in other Rites.

Temple, Order of the. When the Knights Templar had, on account of their power and wealth, excited the fears and the cupidity of Pope Clement V., and King Philip the Fair, of France, the Order was soon compelled to succumb to the combined animosity of a spiritual and a temporal sovereign, neither of whom was capable of being controlled by a spirit of honor or a dictate of conscience. The melancholy story of the sufferings of the Knights, and of the dissolution of their Order, forms a disgraceful record, with which the history of the fourteenth century begins.

On the 13th of March, in the year 1314, and in the refined city of Paris, James de Molay, the last of a long and illustrious line of Grand Masters of the Order of Knights Templar, testified at the stake his fidelity to his vows; and eleven years of service in the cause of religion were terminated, not by the sword of a Saracen, but by the iniquitous sentence of a Catholic pope and a Christian king.

The manufacturers of Masonic legends have found in the death of de Molay and the dissolution of the Order of Templars a fertile source from which to draw materials for their fanciful theories and surreptitious documents. Among these legends there was, for instance, one which maintained that during his captivity in the Bastile the Grand Master of the Templars established four Chiefs of the Order in the north, the south, the east, and the west of Europe, whose seats of government were respectively at Stockholm, Naples, Paris, and Edinburgh. Another invention of these Masonic speculators was the forgery of that document so well known as the Charter of Larmenius, of which I shall presently take notice. Previously, however, to any consideration of this document, I must advert to the condition of the Templar Order in Portugal, because there is an intimate connection between the society there organized and the ORDER OF THE TEMPLE in France, which is more particularly the subject of the present article.

Surprising as it may appear, it is nevertheless true, that the Templars did not receive that check in Portugal to which they were subjected in France, in England, and some other countries of Europe. On the contrary, they were there maintained by King Denis in all their rights and privileges; and although compelled, by a bull of Clement V., to change their names to that of the Knights of Christ, they continued to be governed by the same rules and to wear the same costume as their predecessors, excepting the slight addition of placing a white Latin cross in the center of the usual red one of the ancient Order; and in the decree of establishment it was expressly declared that the king, in creating this new Order, intended only to effect a reform in that of the Templars. In 1420, John I., of Portugal, gave the Knights of Christ the control of the possessions of Portugal in the Indies, and succeeding monarchs granted them the proprietorship of all countries which they might discover, reserving, of course, the royal prerogative of sovereignty. In process of time the wealth and the power of the Order became so great, that the kings of Portugal found it expedient to reduce their rights to a considerable extent; but the Order itself was permitted to continue in existence, the Grand Mastership, however, being for the future vested in the sovereign.

We are now prepared to investigate understandingly the history of the Charter of Larmenius, and of the Order of the Temple at Paris, which was founded on the assumed authenticity of that document. The writings of Thory, of Ragon, and of Clavel, with the passing remarks of a few other Masonic writers, will furnish us with abundant materials for this narrative, interesting to all Freemasons, but more especially so to Masonic Knights Templar.

In the year 1682, and in the reign of Louis XIV., a licentious society was established by several young noblemen, which took the name of "La Petite Resurrection des Templiers," or "*The Little Resurrection of the Templars.*" The members wore concealed upon their shirts a decoration in the form of a cross, on which was embossed the figure of a man trampling on

a woman, who lay prostrate at his feet. The emblematic signification of this symbol was, it is apparent, as unworthy of the character of man as it was derogatory to the condition and claims of woman; and the king, having been informed of the infamous proceedings which took place at the meetings, dissolved the society (which it was said was on the eve of initiating the dauphin); caused its leader, a prince of the blood, to be ignominiously punished, and banished the members from the court; the heaviest penalty that, in those days of servile submission to the throne, could be inflicted on a courtier.

In 1705, Philip of Orleans, who was subsequently the regent of France during the minority of Louis XV., collected together the remnants of this society, which still secretly existed, but had changed its object from a licentious to one of a political character. He caused new statutes to be constructed; and an Italian Jesuit, by name Father Bonani, who was a learned antiquary and an excellent designer, fabricated the document now known as the Charter of Larmenius, and thus pretended to attach the new society to the ancient Order of the Templars.

As this charter is not the least interesting of those forged documents with which the history of Freemasonry unfortunately abounds, a full description of it here will not be out of place.

The theory of the Duke of Orleans and his accomplice Bonani was (and the theory is still maintained by the Order of the Temple at Paris) that when James de Molay was about to suffer at the stake, he sent for Larmenius, and in prison, with the consent and approbation of such of his knights as were present, appointed him his successor, with the right of making a similar appointment before his death. On the demise of de Molay, Larmenius accordingly assumed the office of Grand Master, and ten years after issued this charter, transmitting his authority to Theobaldus Alexandrinus, by whom it was in like manner transmitted through a long line of Grand Masters, until in 1705 it reached Philip, Duke of Orleans. It will be seen hereafter that the list was subsequently continued to a later period.

The signatures of all these Grand Masters are affixed to the charter, which is beautifully executed on parchment, illuminated in the choicest style of Medieval chirography, and composed in the Latin language, but written in the Templar cipher. From the copy of the document given by Thory in his *Acta Latomorum* (ii., 145), I make the following translation:

"I, Brother John Mark Larmenius, of Jerusalem, by the grace of God and the secret decree of the most venerable and holy martyr, the Grand Master of the Soldiery of the Temple, (to whom be honor and glory,) confirmed by the common council of the brethren, being endowed with the Supreme Grand Mastership of the whole Order of the Temple, to every one who shall see these letters decretal thrice greeting:

"Be it known to all, both present and to come, that the failure of my strength, on account of extreme age, my poverty, and the weight of government being well considered, I, the aforesaid humble Master of the Soldiery of the Temple, have determined, for the greater glory of God and the protection and safety of the Order, the brethren, and the statutes, to resign the Grand Mastership into stronger hands.

"On which account, God helping, and with the consent of a Supreme Convention of Knights, I have conferred, and by this present decree do confer, for life, the authority and prerogatives of Grand Master of the Order of the Temple upon the Eminent Commander and very dear brother, Francis Thomas Theobald Alexandrinus, with the power, according to time and circumstances, of conferring the Grand Mastership of the Order of the Temple and the supreme authority upon another brother, most eminent for the nobility of his education and talent and decorum of his manners: which is done for the purpose of maintaining a perpetual succession of Grand Masters, an uninterrupted series of successors, and the integrity of the statutes. Nevertheless, I command that the Grand Mastership shall not be transmitted without the consent of a general convention of the fellow-soldiers of the Temple, as often as that Supreme Convention desires to be convened; and, matters being thus conducted, the successor shall be elected at the pleasure of the knights.

"But, lest the powers of the supreme office should fall into decay, now and for ever let there be four Vicars of the Grand Master, possessing supreme power, eminence, and authority over the whole Order, with the reservation of the rights of the Grand Master; which Vicars of the Grand Masters shall be chosen from among the elders, according to the order of their profession. Which is decreed in accordance with the above-mentioned wish, commended to me and to the brethren by our most venerable and most blessed Master, the martyr, to whom be honor and glory. Amen.

"Finally, in consequence of a decree of a Supreme Convention of the brethren, and by the supreme authority to me committed, I will, declare, and command that the Scottish Templars, as deserters from the Order, are to be accursed, and that they and the brethren of St. John of Jerusalem, (upon whom may God have mercy,) as spoliators of the domains of our soldiery, are now and hereafter to be considered as beyond the pale of the Temple.

"I have therefore established signs, unknown to our false brethren, and not to be known by them, to be orally communicated to our fellow-soldiers, and in which way I have already been pleased to communicate them in the Supreme Convention.

"But these signs are only to be made known after due profession and knightly consecration, according to the statutes, rites, and usages of the fellow-soldiery of the Temple, transmitted by me to the above-named Eminent Commander as they were delivered into

my hands by the venerable and most holy martyr, our Grand Master, to whom be honor and glory. Let it be done as I have said. So mote it be. Amen.

"I, John Mark Larmenius, have done this on the thirteenth day of February, 1324.

"I, Francis Thomas Theobaldus Alexandrinus, God helping, have accepted the Grand Mastership, 1324."

And then follow the acceptances and signatures of twenty-two succeeding Grand Masters—the last, Bernard Raymund Fabré, under the date of 1804.*

The society, thus organized by the Duke of Orleans in 1705, under this Charter, which purported to contain the signatures *manu propria* of eighteen Grand Masters in regular succession, commencing with Larmenius and ending with himself, attempted to obtain a recognition by the Order of Christ, which we have already said was established in Portugal as the legitimate successor of the old Templars, and of which King John V. was at that time the Grand Master. For this purpose the Duke of Orleans ordered two of his members to proceed to Lisbon, and there to open negotiations with the Order of Christ. The king caused inquiries to be made of Don Luis de Cunha, his ambassador at Paris, upon whose report he gave orders for the arrest of the two French Templars. One of them escaped to Gibraltar; but the other, less fortunate, after an imprisonment of two years, was banished to Angola, in Africa, where he died.

The society, however, continued secretly to exist for many years in France, and is supposed by some to have been the same which, in 1789, was known by the name of the *Societé d'Aloyau*, a title which might be translated into English as the "Society of the Sirloin"—a name much more appropriate to a club of *bons vivants* than to an association of knights. The members of this society were dispersed at the time of the French Revolution, the Duke of Casse Brissac, who was massacred at Versailles in 1792, being its Grand Master at the period of its dispersion. Thory says that the members of this association claimed to be the successors of the Templars, and to be in possession of their charters.

A certain Bro. Ledru, one of the sons of the learned Nicholas Philip Ledru, was the physician of Casse Brissac. On the death of that nobleman and the sale of his property, Ledru purchased a piece of furniture, probably an escritoire, in which was concealed the celebrated Charter of Larmenius, the manuscript statutes of 1705, and the journal of proceedings of the Order of the Temple. Clavel says that about the year 1804, Ledru showed these articles to two of his friends—de Saintot and Fabré Palaprat; the latter of whom had formerly been an ecclesiastic. The sight of these documents suggested to them the idea of reviving the Order of the Temple. They proposed to constitute Ledru the Grand Master, but he refused the offer, and nominated Claudius Matheus Radix de Chevillon for the office, who would accept it only under the title of Vicar; and he is inscribed as such on the list attached to the Charter of Larmenius, his name immediately following that of Casse Brissac, who is recorded as the last Grand Master.

These four restorers of the Order were of opinion that it would be most expedient to place it under the patronage of some distinguished personage; and while making the effort to carry this design into execution, Chevillon, excusing himself from further official labor on account of his advanced age, proposed that Fabré Palaprat should be elected Grand Master, but for one year only, and with the understanding that he would resign the dignity as soon as some notable person could be found who would be willing to accept it. But Fabré, having once been invested with the Grand Mastership, ever afterward refused to surrender the dignity.

Among the persons who were soon after admitted into the Order were Decourchant, a notary's clerk; Leblond, an official of the imperial library; and Arnal, an ironmonger, all of whom were entrusted with the secret of the fraud, and at once engaged in the construction of what have since been designated the "Relics of the Order." Of these relics, which are preserved in the treasury of the Order of the Temple at Paris, an inventory was made on the 18th day of May, 1810, being, it is probable, soon after their construction. Dr. Burnes, who was a firm believer in the legitimacy of the Parisian Order and in the authenticity of its archives, has given in his *Sketch of the History of the Knights Templars* (App., p. xii.) a copy of this inventory in the original French. Thory gives it also in his *Acta Latomorum* (ii., 143). A brief synopsis of it may not be uninteresting. The *relics* consist of twelve pieces—"a round dozen"—and are as follows:

1. The Charter of Larmenius, already described. But to the eighteen signatures of Grand Masters in the Charter, which was in 1705 in possession of Philip, Duke of Orleans, are added six more, carrying the succession on from the last-named to Fabré Palaprat, who attests as Grand Master in 1804.

2. A volume of twenty-seven paper sheets, in folio, bound in crimson velvet, satin, and gold, containing the statutes of the Order in manuscript, and signed "Philip."

3. A small copper reliquary, in the shape of a Gothic church, containing four fragments of burnt bones, wrapped in a piece

*After having disappeared for many years, the original of this Charter was rediscovered and purchased by Bro. F. J. W. Crowe, of Chichester, England, who thought it too important and valuable to remain in private hands, and it is now in the possession of the Great Priory of England. A transcript of the document, differing slightly from that given above, has been published by Bro. Crowe in *Ars Quatuor Coronatorum*, vol. 24. [E. L. H.]

of linen. These are said to have been taken from the funeral pile of the martyred Templars.

4. A sword, said to be one which belonged to James de Molay.

5. A helmet, supposed to have been that of Guy, Dauphin of Auvergne.

6. An old gilt spur.

7. A bronze patina, in the interior of which is engraved an extended hand, having rhe ring and little fingers bent in upon the palm, which is the form of the episcopal benediction in the Roman Church.

8. A pax in gilt bronze, containing a representation of St. John, under a Gothic arch. The pax is a small plate of gold, silver, or other rich material, carried round by the priest to communicate the "kiss of peace."

9. Three Gothic seals.

10. A tall ivory cross and three miters, richly ornamented.

11. The beauseant, in white linen, with the cross of the Order.

12. The war standard in white linen, with four black rays.

Of these "relics," Clavel, who, as being on the spot, may be supposed to know something of the truth, tells us that the copper reliquary, the sword, the ivory cross, and the three miters were bought by Leblond from an old iron shop in the market of St. Jean, and from a maker of church vestments in the suburbs of Paris, while the helmet was taken by Arnal from one of the government armories.

Francisco Alvaro da Sylva Freyre de Porto, a knight of the Order of Christ, and a secret agent of John VI., King of Portugal, was admitted into the Order in 1805, and continued a member until 1815. He was one of the few, Clavel says, whom Fabré and the other founders admitted into their full confidence, and in 1812 he held the office of Grand Master's Secretary. Fabré having signified to him his desire to be recognized as the successor of James de Molay by the Grand Master of the Order of Christ, Da Sylva sent a copy of the Charter of Larmenius to John VI., who was then in Brazil; but the request for recognition was refused.

The Order of the Temple, which had thus been ingeniously organized by Fabré Palaprat and his colleagues, began now to assume high prerogatives as the only representative of Ancient Templarism. The Grand Master was distinguished by the sounding titles of "Most Eminent Highness, Very Great, Powerful, and Excellent Prince, and Most Serene Lord." The whole world was divided into different jurisdictions, under the names of provinces, bailiwicks, priories, and commanderies, all of which were distributed among the members; and proofs of nobility were demanded of all candidates; but if they were not able to give these proofs, they were furnished by the Grand Master with the necessary patents.

The ceremonies of initiation were divided into three houses, again subdivided into eight degrees, and were as follows:

I. House of Initiation.

1. *Initiate.* This is the Entered Apprentice's Degree of Freemasonry.

2. *Initiate of the Interior.* This is the Fellow-Craft.

3. *Adept.* This is the Master Mason.

4. *Adept of the East.* The Elu of Fifteen of the Scottish Rite.

5. *Grand Adept of the Black Eagle of St. John.* The Elu of Nine of the Scottish Rite.

II. House of Postulance.

6. *Postulant of the Order.* The Rose Croix Degree.

III. Council.

7. *Esquire.* Merely a preparation for the Eighth Degree.

8. *Knight*, or *Levite of the Interior Guard.* The Philosophical Kadosh.

At first the members of the Order professed the Roman Catholic religion, and hence, on various occasions, Protestants and Jews were denied admission. But about the year 1814, the Grand Master having obtained possession of a manuscript copy of a spurious Gospel of St. John, which is supposed to have been forged in the fifteenth century, and which contradicted in many particulars the canonical Gospel, he caused it to be adopted as the doctrine of the Order; and thus, as Clavel says, at once transformed an Order which had always been perfectly orthodox into a schismatic sect. Out of this spurious Gospel and an introduction and commentary called the "Levitikon," said to have been written by Nicephorus, a Greek monk of Athens, Fabré and his colleagues composed a liturgy, and established a religious sect to which they gave the name of "Johannism."

The consequence of this change of religious views was a schism in the Order. The orthodox party, however, appears to have been the stronger; and after the others had for a short time exhibited themselves as *soi-disant* priests in a Johannite church which they erected, and in which they publicly chanted the liturgy which they had composed, the church and the liturgy were given up, and they retired once more into the secrecy of the Order.

Such is the brief history of the rise and progress of the celebrated Order of the Temple, which still exists at Paris, with, however, a much abridged exercise, if not with less assumption of prerogative. It still claims to be the only true depository of the powers and privileges of the ancient Order of Knights Templar, denouncing all other Templars as spurious, and its Grand Master proclaims himself the legal successor of James de Molay; with how much truth the narrative already given will enable every reader to decide.

The question of the legality of the "Order of the Temple," as the only true body of Knights Templar in modern days, is to be

settled only after three other points have been determined: First, was the Charter of Larmenius, which was brought for the first time to light in 1705 by the Duke of Orleans, an authentic or a forged document? Next, even if authentic, was the story that Larmenius was invested with the Grand Mastership and the power of transmission by de Molay a fact or a fable? And, lastly, was the power exercised by Ledru, in reorganizing the Order in 1804, assumed by himself or actually derived from Casse Brissac, the previous Grand Master? There are many other questions of subordinate but necessary importance to be examined and settled before we can consent to give the Order of the Temple the high and, as regards Templarism, the exclusive position that it claims.

Temple, Second. The Temple built by Zerubbabel is so called. See *Temple of Zerubbabel.*

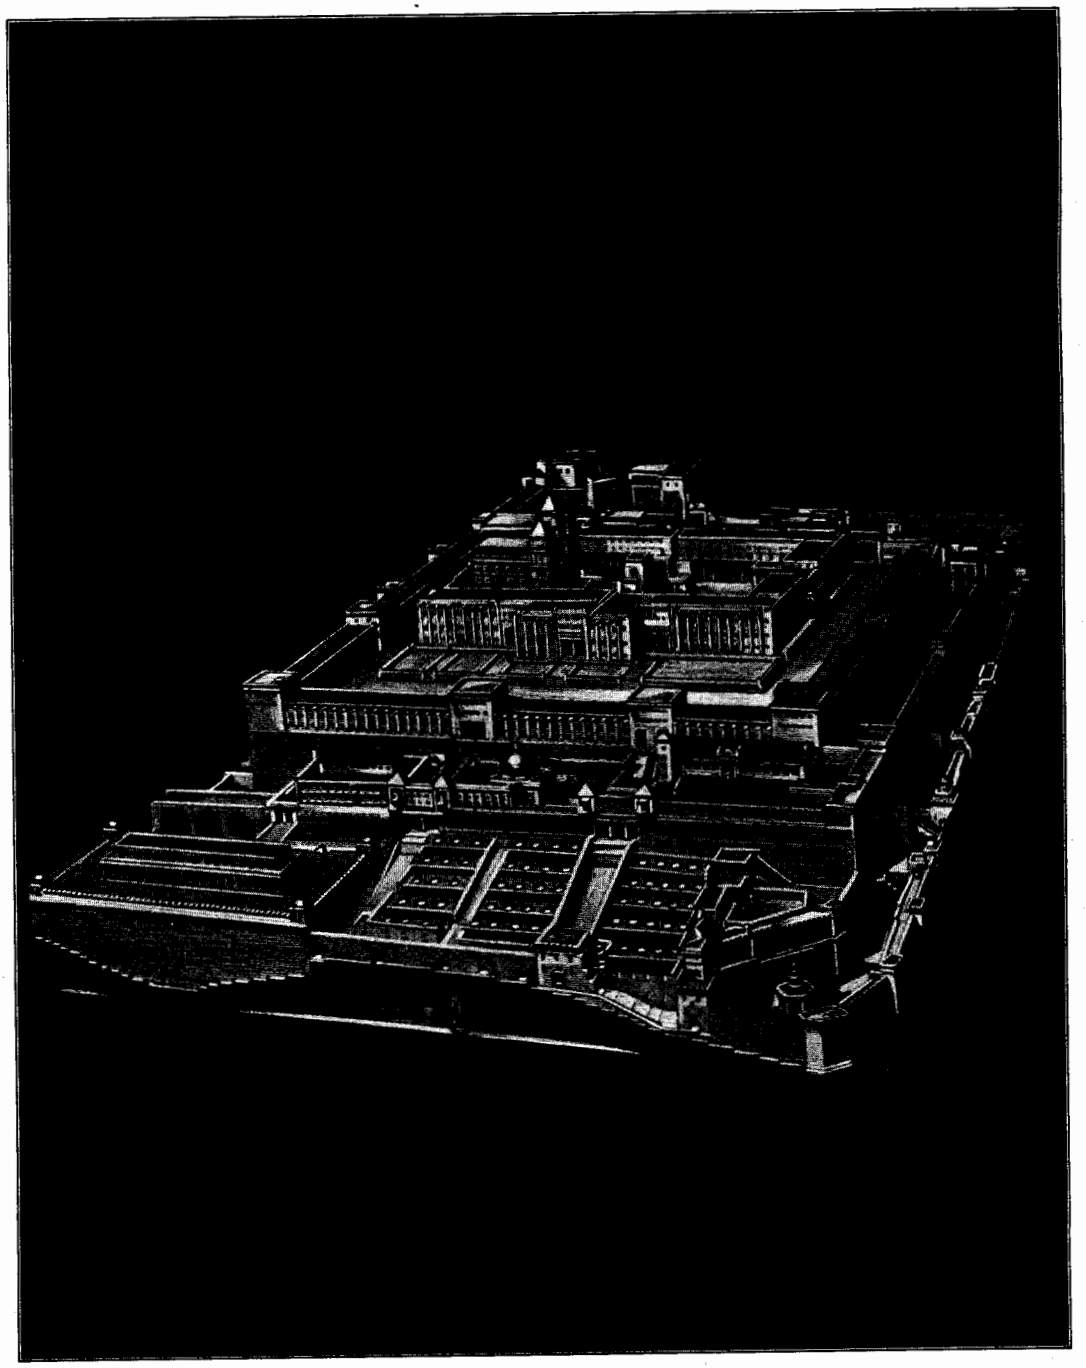
Temple, Sovereign Commander of the. See *Sovereign Commander of the Temple.*

Temple, Sovereign of the Sovereigns Grand Commander of the. (*Souverain des Souverain Grands Commandeur du Temple.*) A degree in the collection of Lemanceau and Le Page. It is said to be a part of the Order of Christ or Portuguese Templarism.

Temple, Spiritual. See *Spiritual Temple.*

Temple, Symbolism of the. Of all the objects which constitute the Masonic science of symbolism, the most important, the most cherished by Masons, and by far the most significant, is the Temple of Jerusalem. The spiritualizing of the Temple is the first, the most prominent, and the most pervading of all symbols of Freemasonry. It is that which most emphatically gives it its religious character. Take from Freemasonry its dependence on the Temple; leave out of its ritual all reference to that sacred edifice, and to the legends and traditions connected with it, and the system itself would at once decay and die, or at best remain only as some fossilized bone, serving merely to show the nature of the once living body to which it had belonged.

Temple worship is in itself an ancient type of the religious sentiment in its progress toward spiritual elevation. As soon as a nation emerged out of Fetishism, or the worship of visible objects, which is the most degraded form of idolatry, its people began to establish a priesthood, and to erect temples. The Goths, the Celts, the Egyptians, and the Greeks, however much they may have differed in the ritual, and in the objects of their polytheistic worship, were all in the possession of priests and of temples. The Jews, complying with this law of our religious nature, first constructed their tabernacle, or portable temple, and then, when time and opportunity permitted, transferred their monotheistic worship to that more permanent edifice which towered in all its magnificence above the pinnacle of Mount Moriah. The mosque of the Mohammedan and the church or chapel of the Christian is but an embodiment of the same idea of temple worship in a simpler form.



The adaptation, therefore, of the Temple of Jerusalem to a science of symbolism, would be an easy task to the mind of those Jews and Tyrians who were engaged in its construction. Doubtless, at its original conception, the idea of this temple symbolism was rude and unembellished. It was to be perfected and polished only by future aggregations of succeeding intellects. And yet no Biblical nor Masonic scholar will venture to deny that there was, in the mode of building and in all the circumstances connected with the construction of King Solomon's Temple, an apparent design to establish a foundation for symbolism.

The Freemasons have, at all events, seized with avidity the idea of representing in their symbolic language the interior and spiritual man by a material temple. They have the doctrine of the great Apostle of the Gentiles, who has said, "Know ye are the temple of God, and that the spirit of God dwelleth in you." The great body of the Masonic Craft, looking only to this first Temple erected by the wisdom of King Solomon, make it the symbol of life; and as the great object of Masonry is the search after truth, they are directed to build up this temple as a fitting receptacle for truth when found, a place where it may dwell, just as the ancient Jews built up their great Temple as a dwelling-place for Him who is the author of all truth.

To the Master Mason, this Temple of Solomon is truly the symbol of human life; for, like life, it was to have its end. For four centuries it glittered on the hills of Jerusalem in all its gorgeous magnificence; now, under some pious descendant of the wise King of Israel, the spot from whose altars arose the burnt-offerings to a living God, and now polluted by some recreant monarch of Judah to the service of Baal; until at length it received the Divine punishment through the mighty King of Babylon, and, having been despoiled of all its treasures, was burnt to the ground, so that nothing was left of all its splendor but a smoldering heap of ashes. Variable in its purposes, evanescent in its existence, now a gorgeous pile of architectural beauty, and anon a ruin over which the resistless power of fire has passed, it becomes a fit symbol of human life occupied in the search after Divine truth, which is nowhere to be found; now sinning and now repentant; now vigorous with health and strength, and anon a senseless and decaying corpse.

Such is the symbolism of the first Temple, that of Solomon, as familiar to the class of Master Masons. But there is a second and higher class of the Fraternity, the Masons of the Royal Arch, by whom this temple symbolism is still further developed.

This second class, leaving their early symbolism and looking beyond this Temple of Solomon, find in Scriptural history another Temple, which, years after the destruction of the first one, was erected upon its ruins; and they have selected the second Temple, the Temple of Zerubbabel, as their prominent

symbol. And as the first class of Masons find in their Temple the symbol of mortal life, limited and perishable, they, on the contrary, see in this second Temple, built upon the foundations of the first, a symbol of life eternal, where the lost truth shall be found, where new incense shall arise from a new altar, and whose perpetuity their great Master had promised when, in the very spirit of symbolism, he exclaimed, "Destroy this temple, and in three days I will raise it up."

And so to these two classes or Orders of Masons the symbolism of the Temple presents itself in a connected and continuous form. To the Master Mason, the Temple of Solomon is the symbol of this life; to the Royal Arch Mason, the Temple of Zerubbabel is the symbol of the future life. To the former, his Temple is the symbol of the search for truth; to the latter, his is the symbol of the discovery of truth; and thus the circle is completed and the system made perfect.

Temple, Workmen at the. See *Workmen at the Temple.*

Templier. The title of a Knights Templar in French. The expression "Chevalier Templier" is scarcely ever used by French writers.

Templum Hierosolymæ. Latin for the Temple of Jerusalem. It is supposed by some to be a phrase concealed under the monogram of the *Triple Tau*, which see.

Ten. Ten cannot be considered as a sacred number in Masonry. But by the Pythagoreans it was honored as a symbol of the perfection and consummation of all things. It was constituted of the monad and duad, the active and passive principles, the triad or their result, and the quaternior or first square, and hence they referred it to their sacred tetractys. They said that ten contained all the relations of numbers and harmony. (See *Tetractys.*)

Ten Expressions. Using, as do the Rabbis, the expression, "In the beginning God created the heaven and the earth," as one, we find nine other expressions in the first chapter of Genesis in which "God said"; thus making ten expressions by which the world was created. There were ten generations from Adam to Noah, to show that God was long-suffering before he deluged the earth. For a similar reason, says the *Talmud*, there were ten generations from Noah to Abraham, until the latter "took the reward of them all." Abraham was proved with ten trials. Ten miracles were wrought for the children of Israel in Egypt, and ten at the Red Sea. Ten plagues afflicted the Egyptians in Egypt, and ten at the Red Sea. And ten miracles were wrought in the Holy Temple. (See *Ten.*)

Tengu. A significant word in the high degrees of the Scottish Rite. The original old French rituals explain it, and say that it and the two other words that accompany are formed out of the initials of the words of a particular sentence which has reference to the "Sacred treasure" of Masonry.

Tennessee. Until the end of the year 1813, the State of Tennessee constituted a part of the Masonic jurisdiction of North Carolina, and the Lodges were held under warrants issuing from the Grand Lodge of "North Carolina and Tennessee," with the exception of one Lodge in Davidson County, which derived its Charter from the Grand Lodge of Kentucky. In December, 1811, a convention was held at Knoxville, when an address was directed to the Grand Lodge of North Carolina, soliciting its assent to the severance of the Masonic jurisdiction and the establishment of an independent Grand Lodge. In October, 1813, this consent was granted, and a convention of the Lodges was ordered by the Grand Master to assemble at Knoxville on December 27, 1813, that the Grand Lodge of Tennessee might be legally constituted. Delegates from eight Lodges accordingly assembled on that day at Knoxville, and a convention was duly organized. A deed of relinquishment from the Grand Lodge of North Carolina was read. By this instrument the Grand Lodge of North Carolina relinquished all authority and jurisdiction over the several Lodges in the State of Tennessee, and assented to the erection of an independent Grand Lodge. A Constitution was accordingly adopted and the Grand Lodge of Tennessee organized, Thomas Claiborne being elected Grand Master.

The first Royal Arch Chapters in Tennessee were instituted by the General Grand Chapter, and the Grand Chapter of Tennessee was organized in 1826.

The Grand Council of Royal and Select Masters was established October 13, 1847.

The Grand Commandery of Tennessee was organized October 12, 1859.

There are in the State a few bodies of the Ancient and Accepted Scottish Rite, which derive their Charters from the Supreme Council for the Southern Jurisdiction.

Tenslo-Dai-Sin. A deity held in adoration by the Japanese; the zodiacal sun, with its twelve constellations, as the representative of the god and his twelve apostles. This omnific being, like the zodiacal light, of triangular form, seen only in the evening after twilight and in the morning before dawn, and whose nature is unknown, is possessed of ineffable attributes, inexpressible and unutterable, with a supreme power to overcome eruptions of nature and the elements. Like unto Masonry, there are four periods of festival, to wit, in the third, fifth, seventh, and ninth of the third, fifth, seventh, and ninth months. The initiates are called Jammabos, and wear aurora-colored robes, like unto the light of the dawn of day.

Tent. The tent, which constitutes a part of the paraphernalia or furniture of a Commandery of Knights Templar, is not only intended for a practical use, but also has a symbolic meaning. The Order of the Templars was instituted for the protection of Christian pilgrims who were visiting the sepulcher of their Lord. The Hospitalers might remain

in the city and fulfil their vows by attendance on the sick, but the Templar must away to the plains, the hills, and the desert, there, in his lonely tent, to watch the wily Saracen, and to await the toilsome pilgrim, to whom he might offer the crust of bread and the draft of water, and instruct him in his way, and warn him of danger, and give him words of good cheer. Often in the early history of the Order, before luxury and wealth and vice had impaired its purity, must these meetings of the toilsome pilgrim, on his way to the holy shrine, with the valiant Knight who stood by his tent door on the roadside, have occurred. And it is just such events as these that are commemorated in the tent scenes of the Templar ritual.

Tenure of Office. All offices in the bodies of the York and American Rites are held by annual election or appointment. But the holder of an office does not become *functus officii* by the election of his successor; he retains the office until that successor has been installed. This is technically called "holding over." It is not election only, but election and installation that give possession of an office in Masonry. If a new Master, having been elected, should, after the election and installation of the other officers of the Lodge, refuse to be installed, the old Master would "hold over," or retain the office until the next annual election. The oath of office of every officer is that he will perform the duties of the office for twelve months, and *until his successor shall have been installed*. In France, in the last century, Warrants of Constitution were granted to certain Masters who held the office for life, and were thence called "Maîtres inamovibles," or immovable Masters. They considered the Lodges committed to their care as their personal property, and governed them despotically, according to their own caprices. But in 1772 this class of Masters had become so unpopular, that the Grand Lodge removed them, and made the tenure of office the same as it was in England.

In the Ancient and Accepted Scottish Rite the officers of a Supreme Council hold their offices, under the Constitutions of 1786, for life. In the subordinate bodies of the Rite, the elections are held annually or triennially. This is also the rule in the Supreme Council of the Northern Jurisdiction, which has abandoned the law of perpetual tenure. The Supreme Council elects its members independently of the Consistories and is thereby self-perpetuating.

Tercy. One of the nine Elus recorded in the high degrees as having been sent out by Solomon to make the search which is referred to in the Master's legend. The name was invented, with some allusion, not now explicable, to the political incidents of Stuart Masons. The name is probably an anagram or corruption of some friend of the house of Stuart. (See *Anagram*.)

Terminus. The god of landmarks, whose worship was introduced among the Romans by Numa. The god was represented by a *cubical stone*. Of all the gods, Terminus was the only one who, when the new Capitol was building, refused to remove his altar. Hence Ovid (*Fasti*, ii., 673) addressed him thus: "O Terminus, no inconstancy was permitted thee; in whatever situation thou hast been placed, there abide, and do not yield one jot to any neighbor asking thee." The Masons pay the same reverence to their landmarks that the Romans did to their god Terminus.

Ternary Allusions. Some of the well-considered and beautiful thoughts of Rev. George Oliver on Ternary Allusions as applicable to the construction of the Temple services of Solomon are the three principal religious festivals—the Feast of Passover, of Pentecost, and of Tabernacles. The Camp was threefold. The Tabernacle, with its precinct, was called "The Camp of the Divine Majesty"; the next, "The Camp of Levi, or little host of the Lord"; and the largest, "The Camp of Israel, or the great host." The tribes were marshaled in subdivisions of three, each being designated by a banner containing one of the cherubic forms of the Deity. The Temple, in like manner, had three divisions and three symbolical references—historical, mystical, and moral. The golden candlestick had twice three branches, each containing three bowls, knobs, and flowers. In the Sanctuary were three sacred utensils—the candlestick, the table of shewbread, and the altar of incense; and three hallowed articles were deposited in the Ark of the Covenant—the tables of the law, the rod of Aaron, and the pot of manna. There were three orders of priests and Levites, and the High Priest was distinguished by a triple crown.

Three allusions may be observed through the whole of Jewish history. Thus, Elijah raised the widow's son by stretching himself upon the child three times. Samaria sustained a siege of three years. Some of the kings of Israel and Judah reigned three years, some three months, some three days. Rehoboam served God three years before he apostated. The Jews fasted three days and three nights, by command of Esther, before their triumph over Haman. Their sacred writings had three grand divisions—the law, the prophets, and the psalms.

In the Masonic system there were three Temples—those of Solomon, Zerubbabel, and Herod. The Jews speak of two that have been, and believe in one, as described by Ezekiel the Prophet, yet to come. The Rabbis say: "The third Temple we hope and look for." (See *Three*.)

[C. T. McClenachan.]

Terrasson, the Abbé Jean. The Abbé Terrasson was born at Lyons, in France, in 1670. He was educated by the congregation of the Oratory, of which his brother André was a priest, but eventually abandoned it, which gave so much offense to his father, that he left him by his will only a very moderate income. The Abbé obtained a chair in the Academy of Sciences in 1707,

and a professorship in the Royal College in 1724, which position he occupied until his death in 1750. He was the author of a *Critical Dissertation on the Iliad of Homer*, a translation of *Diodorus Siculus*, and several other classical and philosophical works. But the work most interesting to the Masonic scholar is his *Séthos, histoire ou vie tirée des monumens anecdotes de l'ancienne Egypt*, published at Paris in 1731. This work excited on its appearance so much attention in the literary world, that it was translated into the German and English languages under the respective titles of: 1. *Abris der wahren Helden-Tugend, oder Lebensgeschichte des Sethos;* translated by Chro. Gli. Wendt, Hamburg, 1732. 2. *Geschichte des Konigs Sethos;* translated by Matth. Claudius, Breslau, 1777; and 3. *The Life of Sethos, taken from private Memoirs of the ancient Egyptians; translated from a Greek MS. into French, and now done into English*, by M. Lediard, London, 1732.

In this romance he has given an account of the initiation of his hero, Sethos, an Egyptian prince, into the Egyptian mysteries. We must not, however, be led into the error, into which Kloss says that the Masonic Fraternity fell on its first appearance, that this account is a well-proved, historical narrative. Much as we know of the Egyptian mysteries, compared with our knowledge of the Grecian or the Asiatic, we have no sufficient documents from which to obtain the consecutive and minute detail which the Abbé Terrasson has constructed. It is like Ramsay's *Travels of Cyrus*, to which it has been compared—a romance rather than a history; but it still contains so many scintillations of truth, so much of the substantials of fact amid the ornaments of fiction, that it cannot but prove instructive as well as amusing. We have in it the outlines of an initiation into the Egyptian mysteries such as the learned Abbé could derive from the documents and monuments to which he was able to apply, with many *lacunæ* which he has filled up from his own inventive and poetic genius.

Terrible Brother. French, *Frère terrible.* An officer in the French Rite, who in an initiation conducts the candidate, and in this respect performs the duty of a Senior Deacon in the York Rite.

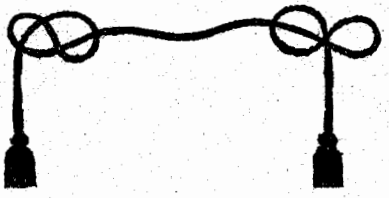
Territorial Jurisdiction. It has now become the settled principle of, at least, American Masonic law, that Masonic and political jurisdiction should be coterminous, that is, that the boundaries which circumscribe the territorial jurisdiction of a Grand Lodge should be the same as those which define the political limits of the State in which it exists. And so it follows that if a State should change its political boundaries, the Masonic boundaries of the Grand Lodge should change with it. Thus, if a State should diminish its extent by the cession of any part of its territory to an adjoining State, the Lodges situated within the ceded territory would pass over to the jurisdiction of the Grand Lodge of the State to which that territory had been ceded.

Tessellated. From the Latin *tessella*, a little square stone. Checkered, formed in little squares of Mosaic work. Applied in Masonry to the Mosaic pavement of the Temple, and to the border which surrounds the tracing-board, probably incorrectly in the latter instance. (See *Tessellated Border.*)

Tessellated Border. Browne says in his *Master Key*, which is supposed to present the general form of the Prestonian lectures, that the ornaments of a Lodge are the Mosaic Pavement, the Blazing Star, and the Tessellated Border; and he defines the Tessellated Border to be "the skirt-work round the Lodge." Webb, in his lectures, teaches that the ornaments of a Lodge are the Mosaic pavement, the indented tessel, and the blazing star; and he defines the indented tessel to be that "beautifully tessellated border or skirting which surrounded the ground-floor of King Solomon's Temple." The French call it "la houpe dentelée," which is literally the *indented tessel;* and they describe it as "a cord forming true-lovers' knots, which surrounds the tracing-board." The Germans call it "die Schnur von starken Faden," or the *cord of strong threads*, and define it as a border surrounding the tracing-board of an Entered Apprentice, consisting of a cord tied in lovers' knots, with two tassels attached to the ends.

The idea prevalent in America, and derived from a misapprehension of the plate in the *Monitor* of Cross, that the tessellated border was a decorated part of the Mosaic pavement, and made like it of little square stones, does not seem to be supported by these definitions. They all indicate that the *tessellated border* was a cord. The interpretation of its symbolic meaning still further sustains this idea. Browne says "it alludes to that kind care of Providence which so cheerfully surrounds and keeps us within its protection whilst we justly and uprightly govern our lives and actions by the four cardinal virtues in divinity, namely, temperance, fortitude, prudence, and justice." This last allusion is to the four tassels attached to the cord. (See *Tassels.*)

Webb says that it is "emblematic of those blessings and comforts which surround us, and which we hope to obtain by a faithful reliance on Divine Providence."



The French ritual says that it is intended "to teach the Mason that the society of which he constitutes a part surrounds the earth, and that distance, so far from relaxing the bonds which unite the members to each other, ought to draw them closer."

Lenning says that it symbolizes the fraternal bond by which all Masons are united.

But Gädicke is more precise. He defines it as "the universal bond by which every Mason ought to be united to his brethren," and he says that "it should consist of sixty threads or yarns, because, according to the

ancient statutes, no Lodge was allowed to have above sixty members."

Oliver (*Landm.*, i., 174) says "the Tracing-Board is surrounded by an indented or tessellated border . . . at the four angles appear as many tassels." But in the old English tracing-boards the two lower tassels are often omitted. They are, however, generally found in the French. Lenning, speaking, I suppose, for the German, assigns to them but two. Four tassels are, however, necessary to complete the symbolism, which is said to be that of the four cardinal virtues. The tessellated, more properly, therefore, the tassellated, border consists of a cord intertwined with knots, to each end of which is appended a tassel. It surrounds the border of the tracing-board, and appears at the top in the following form:

There is, however, in these old tracing-boards another border, which surrounds the entire picture with lines, as in the following figure:

This indented border, which was made to represent a cord of black and white threads, was, I think, in time mistaken for *tessellæ*, or little stones; an error probably originating in confounding it with the tessellated pavement, which was another one of the ornaments of the Lodge.

We find that we have for this symbol five different names: in English, the indented tarsel, the indented tassel, the indented tessel, the tassellated border, and the tessellated border; in French, the houpe dentelée, or indented tessel; and in German, the Schnur von starken Faden, or the cord of strong threads.

The question what is the true tessellated border would not be a difficult one to answer, if it were not for the variety of names given to it in the English rituals. We know by tradition, and by engravings that have been preserved, that during the ceremonies of initiation in the early part of the last century the symbols of the Order were marked out in chalk on the floor, and that this picture was encircled by a waving cord. This cord was ornamented with tassels, and formerly a border to the tracing on the floor was called the indented tassel, the cord and the tufts attached to it being the tassel, which, being by its wavy direction partly in and partly outside of the picture, was said to be indented. This *indented tassel* was subsequently corrupted by illiterate Masons into *indented tarsel*, the appellation met with in some of the early catechisms.

Afterward, looking to its decoration with tassels and to its position as a border to the tracing-board, it was called the *tassellated border*. In time the picture on the floor was transferred to a permanent tracing-board, and then the tassels were preserved at the top, and the rest of the cord was represented around the board in the form of white and black angular spaces. These were mistaken for little stones, and the *tassellated border* was called, by a natural corruption, the *tessellated* border. Many years ago, when I first met with the idea of this corruption from *tassellated* to *tessellated*, which was suggested to Dr. Oliver by "a learned Scottish Mason," whose name he does not give, I was inclined to doubt its correctness. Subsequent investigations have led me to change that opinion. I think that I can readily trace the gradual steps of corruption and change from the original name *indented tassel*, which the early French Masons had literally translated by *houpe dentelée*, to *indented tarsel*, and sometimes, according to Oliver, to *indented trasel;* then to *tassellated border*, and, finally, to *tessellated border*, the name which it now bears.

The form and the meaning of the symbol are now apparent. The *tessellated border*, as it is called, is a cord, decorated with tassels, which surrounds the tracing-board of an Entered Apprentice, the said tracing-board being a representation of the Lodge, and it symbolizes the bond of love—the mystic tie—which binds the Craft wheresoever dispersed into one band of brotherhood.

Tessel, Indented. See *Tessellated Border*.

Tessera Hospitalis. Latin. Literally, "the token of the guest," or "the hospitable die." It was a custom among the ancients, that when two persons formed an alliance of friendship, they took a small piece of bone, ivory, stone, or even wood, which they divided into two parts, each one inscribing his name upon his half. They then made an exchange of the pieces, each promising to retain the part entrusted to him as a perpetual token of the covenant into which they had entered, of which its production at any future time would be a proof and a reminder. (See the subject more fully treated in the article *Mark*.)

Testimony. In Masonic trials the testimony of witnesses is taken in two ways—that of profanes by affidavit, and that of Masons on their Masonic obligation.

Tests. Test questions, to which the conventional answers would prove the Masonic character of the person interrogated, were in very common use in the last century in England. They were not, it is true, enjoined by authority, but were conventionally used to such an extent that every Mason was supposed to be acquainted with them. They are now obsolete; but not very long ago such "catch questions" as "Where does the

Master hang his hat?" and a few others, equally trivial, were in use.

Oliver gives (*Golden Remains*, iv., 14) the following as the tests in use in the early part of the last century. They were introduced by Desaguliers and Anderson at the revival in 1717. Some of them, however, were of a higher character, being taken from the catechism or lecture then in use as a part of the instructions of the Entered Apprentice.

What is the place of the Senior Entered Apprentice?
What are the fixed lights?
How ought the Master to be served?
What is the punishment of a cowan?
What is the bone box?
How is it said to be opened only with ivory keys?
By what is the key suspended?
What is the clothing of a Mason?
What is the brand?
How high was the door of the middle chamber?
What does this stone smell of?
The name of an Entered Apprentice?
The name of a Fellow-Craft?
The name of Master Mason?

In the year 1730, Martin Clare having, by order of the Grand Lodge, remodeled the lectures, he abolished the old tests and introduced the following new ones:

Whence came you?
Who brought you here?
What recommendation do you bring?
Do you know the secrets of Masonry?
Where do you keep them?
Have you the key?
Where is it deposited?
When you were made a Mason, what did you consider most desirable?
What is the name of your Lodge?
Where is it situated?
What is its foundation?
How did you enter the Temple of Solomon?
How many windows did you see there?
What is the duty of the youngest apprentice?
Have you ever worked as a Mason?
What did you work with?
Salute me as a Mason.

Ten years afterward Clare's tests were superseded by a new series of "examination questions," which were promulgated by Dr. Manningham, and very generally adopted. They are as follows:

Where were you made a Mason?
What did you learn there?
How do you hope to be rewarded?
What access have you to that Grand Lodge?
How many steps?
What are their names?
How many qualifications are required in a Mason?
What is the standard of a Mason's faith?
What is the standard of his actions?
Can you name the peculiar characteristics of a Mason's Lodge?
What is the interior composed of?
Why are we termed brethren?
By what badge is a Mason distinguished?
To what do the reports refer?
How many principal points are there in Masonry?
To what do they refer?
Their names?
The allusion?

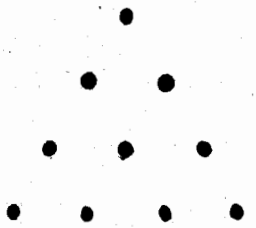
Thomas Dunckerley subsequently made a new arrangement of the lectures, and with them the tests. For the eighteen which composed the series of Manningham, he invented ten, but which were more significant and important in their bearing. They were as follows:

How ought a Mason to be clothed?
When were you born?
Where were you born?
How were you born?
Did you endure the brand with fortitude and patience?
The situation of the Lodge?
What is its name?
With what have you worked as a Mason?
Explain the sprig of Cassia.
How old are you?

Preston subsequently, as his first contribution to Masonic literature, presented the following system of tests, which were at a later period adopted:

Whither are you bound?
Are you a Mason?
How do you know that?
How will you prove it to me?
Where were you made a Mason?
When were you made a Mason?
By whom were you made a Mason?
From whence come you?
What recommendation do you bring?
Any other recommendation?
Where are the secrets of Masonry kept?
To whom do you deliver them?
How do you deliver them?
In what manner do you serve your Master?
What is your name?
What is the name of your son?
If a Brother were lost, where should you hope to find him?
How should you expect him to be clothed?
How blows a Mason's wind?
Why does it thus blow?
What time is it?

These Prestonian tests continued in use until the close of the last century, and Dr. Oliver says that at his initiation, in 1801, he was fully instructed in them.



Tests of this kind appear to have existed at an early period. The "examination of a Steinmetz," given by Findel in his *History of Freemasonry*, presents all the characteristics of the English "tests."

The French Masons have one, "Comment êtes vous entré dans le Temple de Salomon?" and in America, besides the one already mentioned, there are a few others which are sometimes used, but without legal authority. A review of these

tests will lead to the conclusion adopted by Oliver, that "they are doubtless of great utility, but in their selection a pure and discriminating taste has not always been used."

Test Word. In the year 1829, during the anti-Masonic excitement in America, the Grand Lodge of New York proposed, as a safeguard against "the introduction of impostors among the workmen," a test word to be used in all examinations in addition to the legitimate tests. But as this was deemed an innovation on the landmarks, and as it was impossible that it could ever become universal, the Grand Lodges of the United States very properly rejected it, and it was never used.

Tetractys. The Greek word τετρακτὺς signifies, literally, the number four, and is therefore synonymous with the *quaternion;* but it has been peculiarly applied to a symbol of the Pythagoreans, which is composed of ten dots arranged in a triangular form of four rows.

This figure was in itself, as a whole, emblematic of the Tetragrammaton, or sacred name of four letters (for *tetractys*, in Greek, means *four*), and was undoubtedly learned by Pythagoras during his visit to Babylon. But the parts of which it is composed were also pregnant symbols. Thus the one point was a symbol of the active principle or creator, the two points of the passive principle or matter, the three of the world proceeding from their union, and the four of the liberal arts and sciences, which may be said to complete and perfect that world.

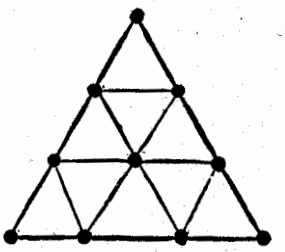
This arrangement of the ten points in a triangular form was called the *tetractys* or number four, because each of the sides of the triangle consisted of four points, and the whole number of ten was made up by the summation of the first four figures, $1 + 2 + 3 + 4 = 10$.

Hierocles says, in his *Commentaries on the Golden Verses* (v., p. 47): "But how comes God to be the Tetractys? This thou mayst learn in the sacred book ascribed to Pythagoras, in which God is celebrated as the number of numbers. For if all things exist by His eternal decrees, it is evident that in each species of things the number depends on the cause that produces them. . . . Now the power of ten is four; for before we come to a complete and perfect decade, we discover all the virtue and perfection of the ten in the four. Thus, in assembling all numbers from one to four inclusive, the whole composition makes ten," etc.

And Dacier, in his Notes on these Commentaries and on this particular passage, remarks that "Pythagoras, having learned in Egypt the name of the true God, the mysterious and ineffable name Jehovah, and finding that in the original tongue it was composed of four letters, translated it into his own language by the word tetractys, and gave the true explanation of it, saying that it properly signified the source of nature that perpetually rolls along."

So much did the disciples of Pythagoras venerate the tetractys, that it is said that they took their most solemn oaths, especially that of initiation, upon it. The exact words of the oath are given in the *Golden Verses*, and are referred to by Jamblichus in his *Life of Pythagoras:*

Ναὶ μὰ τὸν ἀμετέρα ψυχᾷ παραδόντα τετρακτὺν
Παγὰν ἀενάου φύσεως, ἀλλ' ἔρχευ ἐπ' ἔργον.



i. e.,

"I swear it by him who has transmitted into
our soul the sacred tetractys,
The source of nature, whose course is eternal."

Jamblichus gives a different phraseology of the oath, but with substantially the same meaning. In the symbols of Masonry, we will find the sacred delta bearing the nearest analogy to the tetractys of the Pythagoreans.

The outline of these points form, it will be perceived, a triangle; and if we draw short lines from point to point, we will have within this great triangle nine smaller ones. Dr. Hemming, in his revision of the English lectures, adopted in 1813, thus explains this symbol:

"The great triangle is generally denominated Pythagorean, because it served as a principal illustration of that philosopher's system. This emblem powerfully elucidates the mystical relation between the numerical and geometrical symbols. It is composed of ten points, so arranged as to form one great equilateral triangle, and at the same time to divide it into nine similar triangles of smaller dimensions. The first of these, representing unity, is called a *monad*, and answers to what is denominated a point in geometry, each being the principle by the multiplication of which all combinations of form and number are respectively generated. The next two points are denominated a *duad*, representing the number two, and answers to the geometrical line which, consisting of length without breadth, is bounded by two extreme points. The three following points are called the *triad*, representing the number three, and may be considered as having an indissoluble relation to all superficies, which consist of length and breadth, when contemplated as abstracted from thickness."

Dr. Hemming does not appear to have improved on the Pythagorean symbolization.

Tetradites. Believers in the occult powers of the numeral four, and in a Godhead of four persons in lieu of three. In this connection, the following figure is worthy of examination, it being a star of five points

enclosing the three letters of the Ineffable Name, but forming the Tetragrammaton, the *Shem Hamphorash*. This figure has been claimed to represent the Godhead.

Tetragrammaton. In Greek, it signifies a word of four letters. It is the title given by the Talmudists to the name of God Jehovah, which in the original Hebrew consists of four letters, יהוה. (See *Jehovah*.)

Teutonic Knights. The origin of this Order was a humble but a pious one. During the Crusades, a wealthy gentleman of Germany, who resided at Jerusalem, commiserating the condition of his countrymen who came there as pilgrims, made his house their receptacle, and afterward built a hospital, to which, by the permission of the Patriarch of Jerusalem, he added an oratory dedicated to the Virgin Mary. Other Germans coming from Lubeck and Bremen contributed to the extension of this charity, and erected at Acre, during the third Crusade, a sumptuous hospital, and assumed the title of Teutonic Knights, or Brethren of the Hospital of our Lady of the Germans of Jerusalem. They elected Henry Walpott their first Master, and adopted for their government a Rule closely approximating to that both of the Templars and the Hospitalers, with an additional one that none but Germans should be admitted into the Order. Their dress consisted of a white mantle, with a black cross embroidered in gold. Clark says (*Hist. of Knighthood*, ii., 60) that the original badge, which was assigned to them by the Emperor Henry VI., was a black cross potent; and that form of cross has ever since been known as a Teutonic Cross. John, King of Jerusalem, added the cross double potent gold, that is, a cross potent of gold on the black cross. The Emperor Frederick II. gave them the black double-headed eagle, to be borne in an inescutcheon in the center of the cross; and St. Louis, of France, added to it, as an augmentation, a blue chief strewn with fleur-de-lis.

During the siege of Acre they did good service to the Christian cause; but on the fall of that city, the main body returned to Europe with Frederick II. For many years they were engaged in crusades against the pagan inhabitants of Prussia and Poland. Ashmole says that in 1340 they built the city of Maryburg, and there established the residence of their Grand Master. They were for a long time engaged in contests with the kings of Poland on account of their invasion of their territory. They were excommunicated by Pope John XXII., but relying on their great strength, and the remoteness of their province, they bid defiance to ecclesiastical censures, and the contest ended in their receiving Prussia proper as a brief of the kings of Poland.

In 1511, Albert, Margrave of Brandenburg, was elected their Grand Master. In 1525 he abandoned the vows of his Order; became a Protestant, and exchanged his title of Grand Master for that of Duke of Eastern Prussia; and thus the dominion of the Knights was brought to an end, and the foundation laid of the future kingdom of Prussia.

The Order, however, still continued its existence, the seat of the Grand Master being at Mergentheim, in Swabia. By the peace of Presburg, in 1805, the Emperor Francis II. obtained the Grand Mastership, with all its rights and privileges. In 1809 Napoleon abolished the Order, but it still has a titular existence in Austria.

Attempts have been made to incorporate the Teutonic Knights into Masonry, and their cross has been adopted in some of the high degrees. But we fail to find in history the slightest traces of any actual connection between the two Orders.

Texas. Freemasonry was introduced in Texas by the formation of a Lodge at Brazoria, which met for the first time, December 27, 1835. The Dispensation for this Lodge was granted by J. H. Holland, Grand Master of Louisiana, and in his honor the Lodge was called Holland Lodge, No. 36. It continued to meet until February, 1836, when the war with Mexico put an end to its labors for the time. In October, 1837, it was reopened at Houston, a Charter having in the interval been issued for it by the Grand Lodge of Louisiana. In the meantime two other Lodges had been chartered by the Grand Lodge of Louisiana, Milam, No. 40, at Nacogdoches, and McFarlane, No. 41, at San Augustine. Delegates from these Lodges met at Houston, December 20, 1837, and organized the Grand Lodge of the Republic of Texas, Anson Jones being elected Grand Master.

The introduction of Royal Arch Masonry into Texas was accompanied with some difficulties. In 1838, the General Grand Chapter of the United States granted a

Charter for a Chapter at San Felipe de Austin. The members, finding it impracticable to meet at that place, assumed the responsibility of opening it at Galveston, which was done June 2, 1840. This irregular action was, on application, healed by the General Grand Chapter. Subsequently this body united with two illegal Chapters in the Republic to form a Grand Chapter. This body was declared illegal by the General Grand Chapter, and Masonic intercourse with it prohibited. The Chapter at Galveston submitted to the decree, and the so-called Grand Chapter of Texas was dissolved. Charters were then granted by the General Grand Chapter to seven other Chapters, and in 1850 the Grand Chapter of Texas was duly established.*

The Grand Commandery of Texas was organized January 19, 1855.

T.·.G.·.A.·.O.·.T.·.U.·. The initials of *The Great Architect of the Universe*. Often used in this abbreviated form by Masonic writers.

Thammuz. Spelled also *Tammuz*. A deity worshiped by the apostate Jews in the time of Ezekiel, and supposed by most commentators to be identical with the Syrian god Adonis. (See *Adonis, Mysteries of.*)

Thanks. It is a usage of French Masonry, and in the high degrees of some other Rites, for the candidate, after his initiation and the address of the orator to him, to return thanks to the Lodge for the honor that has been conferred upon him. It is a voluntary and not an obligatory duty, and is not practised in the Lodges of the York and American Rites.

Theism. Theological writers have defined theism as being the belief in the existence of a Deity who, having created the world, directs its government by the constant exercise of his beneficent power, in contradistinction to atheism, which denies the existence of any such creative and superintending being. In this sense, theism is the fundamental religion of Masonry, on which is superimposed the additional and peculiar tenets of each of its disciples.

Theocratic Philosophy of Freemasonry. This is a term invented by Dr. Oliver to indicate that view of Freemasonry which intimately connects its symbols with the teachings of pure religion, and traces them to the primeval revelations of God to man, so that the philosophy of Masonry shall develop the continual government of the Divine Being. Hence he says: "It is the Theocratic Philosophy of Freemasonry that commands our unqualified esteem, and seals in our heart that love for the Institution which will produce an active religious faith and practice, and lead in the end to 'a building not made with hands, eternal in the heavens.'" He has developed this system in one of his works entitled *The Theocratic Philosophy of Freemasonry, in twelve lectures on its Speculative, Operative, and Spurious Branches.* In this work he enters with great minuteness into an examination of the speculative character of the Institution and of its operative division, which he contends had been practised as an exclusively scientific pursuit from the earliest times in every country in the would. Many of the legendary speculations advanced in this work will be rejected at this day as unsound and untenable, but his views of the true philosophy of Freemasonry are worthy of profound study.

Theological Virtues. Under the name of the Cardinal Virtues, because all the other virtues hinged upon them, the ancient Pagans gave the most prominent place in their system of ethics to Temperance, Prudence, Fortitude, and Justice. But the three virtues taught in the theology of St. Paul, Faith, Hope, and Charity, as such were unknown to them. To these, as taking a higher place and being more intimately connected with the relations of man to God, Christian writers have given the name of the Theological Virtues. They have been admitted into the system of Masonry, and are symbolized in the Theological ladder of Jacob.

Theopaschites. Followers of Peter the Fuller, who flourished in the fifth century, and believed in the crucifixion of all three of the Godhead.

Theoricus. The second grade of the "First Order" of the Society of Rosicrucians. (See *Rosicrucianism.*)

Theoricus. The Twelfth Degree of the German Rose Croix.

Theosophists. There were many theosophists — enthusiasts whom Vaughan calls "noble specimens of the mystic"—but those with whom the history of Masonry has most to do were the mystical religious thinkers of the last century, who supposed that they were possessed of a knowledge of the Divinity and his works by supernatural inspiration, or who regarded the foundation of their mystical tenets as resting on a sort of Divine intuition. Such were Swedenborg, who, if not himself a Masonic reformer, has supplied the materials of many degrees; the Moravian brethren, the object of whose association is said to have been originally the propagation of the Gospel under the Masonic veil; St. Martin, the founder of the Philalethans; Pernetty, to whom we owe the Order of Illuminati at Avignon; and Chastanier, who was the inventer of the Rite of Illuminated Theosophists. The object proposed in all these theosophic degrees was the regeneration of man, and his reintegration into the primitive innocence from which he had fallen by original sin. Theosophic Masonry was, in fact, nothing else than an application of the speculative ideas of Jacob Böhme, of Swedenborg,

*The Grand Chapter of Texas has long refused to admit the authority of the General Grand Chapter and takes no part in their proceedings. The Chapters for many years worked the Council degrees in the Chapter, having no separate Council of Royal and Select Masters. The petitions of the Chapter read: "Royal Arch and Appendant Degrees." [E. E. C.]

and other mystical philosophers of the same class. Vaughan, in his *Hours with the Mystics* (ii., 46), thus decribes the earlier theosophists of the fourteenth century: "They believed devoutly in the genuineness of the Kabbala. They were persuaded that, beneath all the floods of change, this oral tradition had perpetuated its life unharmed from the days of Moses downward—even as Jewish fable taught them that the cedars alone, of all trees, had continued to spread the strength of their invulnerable arms below the waters of the deluge. They rejoiced in the hidden lore of that book as in a treasure rich with the germs of all philosophy. They maintained that from its marvelous leaves man might learn the angelic heraldry of the skies, the mysteries of the Divine nature, the means of converse with the potentates of heaven."

Add to this an equal reverence for the unfathomable mysteries contained in the prophecies of Daniel and the vision of the Evangelist, with a proneness to give to everything Divine a symbolic interpretation, and you have the true character of those later theosophists who labored to invent their particular systems of Masonry. For more of this subject, see the article on *Saint Martin*.

Nothing now remains of theosophic Masonry except the few traces left through the influence of Zinnendorf in the Swedish system, and what we find in the Apocalyptic degrees of the Scottish Rite. The systems of Swedenborg, Pernetty, Paschalis, St. Martin, and Chastanier have all become obsolete.

Therapeutæ. An ascetic sect of Jews in the first century after Christ, whom Milman calls the ancestors of the Christian monks and hermits. They resided near Alexandria, in Egypt, and bore a striking resemblance in their doctrines to those of the Essenians. They were, however, much influenced by the mystical school of Alexandria, and, while they borrowed much from the Kabbala, partook also in their speculations of Pythagorean and Orphic ideas. Their system pervades some of the high degrees of Masonry. The best account of them is given by Philo Judæus.

Theriog. The 613 precepts into which the Jews divided the Mosaical law. Thus the Hebrew letters תרינ numerically express 613. (See description of *Taliith*.)

Theurgy. From the Greek *Theos*, God, and *ergon*, work. The ancients thus called the whole art of magic, because they believed its operations to be the result of an intercourse with the gods. But the moderns have appropriated it to that species of magic which operates by celestial means as opposed to natural magic, which is effected by a knowledge of the occult powers of nature, and necromancy or magic effected by the aid of evil spirits. Attempts have been made by some speculative authors to apply this high magic, as it is also called, to an interpretation of Masonic symbolism. The most notorious and the most prolific writer on this subject is Louis Alphonse Constance, who, under the name of Eliphas Levy, has given to the world numerous works on the dogma and ritual, the history and the interpretation, of this theurgic Masonry.

Third Degree. See *Master Mason*.

Thirteen, The. A Parisian society claiming to exercise an occult influence during the First Empire. A society of growing proportions in the United States, intended to confound and uproot superstition, with an indirect reference to Arthur's Round Table and the Judas of infamy.

Thirty-Second Degree. See *Sublime Prince of the Royal Secret*.

Thirty-Six. In the Pythagorean doctrine of numbers, 36 symbolized the male and female powers of nature united, because it is composed of the sum of the four odd numbers, $1+3+5+7=16$, added to the sum of the four even numbers, $2+4+6+8=20$, for $16+20=36$. It has, however, no place among the sacred numbers of Masonry.

Thirty-Third Degree. See *Sovereign Grand Inspector-General*.

Thokath. תוקף, strength. An expression known to the Brethren of the Scottish Rite in the Twelfth Degree.

Thomists. An ancient Christian church in Malabar, said to have been founded by St. Thomas.

Thor or **Thorr,** contracted from Thonar, and sometimes known as Donar. This deity presided over the mischievous spirits in the elements, and was the son of Odin and Freyia. These three were known in mythology as the triune deity—the Father, Son, and Spirit. Thor's great weapon of destruction or force was the Miolner, the hammer or mallet, which had the marvelous property of invariably returning to its owner after having been launched upon its mission, and having performed its work of destruction.

Thory, Claude Antoine. A distinguished French Masonic writer, who was born at Paris, May 26, 1759. He was by profession an advocate, and held the official position of Registrar of the Criminal Court of the Chatelet, and afterward of first adjunct of the Mayor of Paris. He was a member of several learned societies, and a naturalist of considerable reputation. He devoted his attention more particularly to botany, and published several valuable works on the genus *Rosa*, and also one on strawberries, which was published after his death.

Thory took an important part, both as an actor and a writer, in the Masonic history of France. He was a member of the Lodge "Saint Alexandre d'Ecosse," and of the "Contrat Social," out of whose incorporation into one proceeded the Mother Lodge of the Philosophic Scottish Rite, of which Thory may be justly called the founder. He was at its constitution made the presiding officer, and afterward its treasurer, and keeper of its archives. In this last capacity, he made a collection of rare and valuable manuscripts, books, medals, seals, jewels, bronze

figures, and other objects connected with Freemasonry. Under his administration, the library and museum of the Mother Lodge became perhaps the most valuable collection of the kind in France or in any other country. After the Mother Lodge had ceased its labors in 1826, this collection passed by a previous stipulation into the possession of the Lodge of Mont Thabor, which was the oldest of the Rite.

Thory, while making collections for the Lodge, had amassed for himself a fund of the most valuable materials toward the history of Freemasonry, which he used with great effect in his subsequent publications. In 1813 he published the *Annales Originis Magni Galliarum Orientis, ou Histoire de la Fondation du Grand Orient de France*, in 1 vol., 8vo; and in 1815 his *Acta Latomorum, ou Chronologie del 'Histoire de la Franche-Maçonnerie, française et étrangère*, in 2 vols., 8vo.

The value of these works, especially of the latter, if not as well-digested histories, certainly as important contributions to Masonic history, cannot be denied. Yet tney have been variously appreciated by his contemporaries. Rebold (*Hist. des 3 G. L.*, p. 530) says of the *Annales*, that it is one of the best historical productions that French Masonic literature possesses; while Besuchet (*Précis Historique*, ii., 275) charges that he has attempted to discharge the functions of an historian without exactitude and without impartiality. These discordant views are to be attributed to the active part that Thory took in the contests between the Grand Orient and the Scottish Rite, and the opposition which he offered to the claims of the former to the Supreme Masonic authority. Posterity will form its judgment on the character of Thory as a Masonic historian without reference to the evanescent rivalry of parties. He died in October, 1827

Thoux de Salverte. Founder in 1767, at Warsaw, of the *Academy of Ancients*, which see.

Thread of Life. In the earliest lectures of the last century, we find this Catechism:

"*Q.* Have you the key of the Lodge?

"*A.* Yes, I have.

"*Q.* What is its virtue?

"*A.* To open and shut, and shut and open.

"*Q.* Where do you keep it?

"*A.* In an ivory box, between my tongue and my teeth, or within my heart, where all my secrets are kept.

"*Q.* Have you the chain to the key?

"*A.* Yes, I have.

"*Q.* How long is it?

"*A.* As long as from my tongue to my heart."

In a later lecture, this key is said to "hang by a tow line nine inches or a span." And later still, in the old Prestonian lecture, it is said to hang by "the thread of life, in the passage of entrance, nine inches or a span long, the supposed distance between guttural and pectoral." All of which is intended simply to symbolize the close connection which in every Mason should exist between his tongue and his heart, so that the one may utter nothing that the other does not truly dictate.

Three. Everywhere among the ancients the number three was deemed the most sacred of numbers. A reverence for its mystical virtues is to be found even among the Chinese, who say that numbers begin at one and are made perfect at three, and hence they denote the multiplicity of any object by repeating the character which stands for it three times. In the philosophy of Plato, it was the image of the Supreme Being, because it includes in itself the properties of the two first numbers, and because, as Aristotle says, it contains within itself a beginning, a middle, and an end. The Pythagoreans called it perfect harmony. So sacred was this number deemed by the ancients, that we find it designating some of the attributes of almost all the gods. The thunderbolt of Jove was three-forked; the scepter of Neptune was a trident; Cerberus, the dog of Pluto, was three-headed; there were three Fates and three Furies; the sun had three names, Apollo, Sol, and Liber; and the moon three also, Diana, Luna, and Hecate. In all incantations, three was a favorite number, for, as Virgil says, "numero Deus impari gaudet," God delights in an odd number. A triple cord was used, each cord of three different colors, white, red, and black; and a small image of the subject of the charm was carried thrice around the altar, as we see in Virgil's eighth eclogue (l. 73):

"Terna tibi hæc primum, triplici diversa colore,
Licia circumdo, terque hæc altaria circum
Effigiem duco."

i. e.,

"First I surround thee with these three pieces of list, and I carry thy image three times round the altars."

The Druids paid no less respect to this sacred number. Throughout their whole system, a reference is constantly made to its influence; and so far did their veneration for it extend, that even their sacred poetry was composed in triads.

In all the mysteries, from Egypt to Scandinavia, we find a sacred regard for the number three. In the Rites of Mithras, the Empyrean was said to be supported by three intelligences, Ormuzd, Mithra, and Mithras. In the Rites of Hindustan, there was the trinity of Brahma, Vishnu, and Siva. It was, in short, a general character of the mysteries to have three principal officers and three grades of initiation.

In Freemasonry, the ternary is the most sacred of all the mystical numbers. Beginning with the old axiom of the Roman Artificers, that *tres faciunt collegium*, or it requires three to make a college, they have established the rule that not less than three

shall congregate to form a Lodge. Then in all the Rites, whatever may be the number of superimposed grades, there lie at the basis the three Symbolic degrees. There are in all the degrees three principal officers, three supports, three greater and three lesser lights, three movable and three immovable jewels, three principal tenets, three working-tools of a Fellow-Craft, three principal orders of architecture, three chief human senses, three Ancient Grand Masters. In fact, everywhere in the system the number three is presented as a prominent symbol. So much is this the case, that all the other mystical numbers depend upon it, for each is a multiple of three, its square or its cube, or derived from them. Thus, 9, 27, 81, are formed by the multiplication of three, as $3 \times 3 = 9$, and $3^1 \times 3 = 27$, and $3^1 \times 3^1 = 81$.

But in nothing is the Masonic signification of the ternary made more interesting than in its connection with the sacred delta, the symbol of Deity. (See *Triangle*.)

Three Fires. Guardians of the Sixty-seventh Degree of the Modern Rite of Memphis.

Three-Fold Cord. A triple cord whose strands are of different colors; it is used in several rites as an instructive symbol. (See *Zennaar*.)

Three Globes, Rite of the Grand Lodge of the. On September 13, 1740, the Lodge of the Three Globes, *zu den drei Weltkugeln*, was established in the city of Berlin, Prussia. In 1744 it assumed the rank and title of a Grand Mother Lodge. It is now one of the three Prussian Grand Lodges and has 144 St. John's (or Craft) Lodges and 72 Scottish Lodges under its jurisdiction. At first it worked, like all the other Lodges of Germany, in the English system of three degrees, and adopted the English Book of Constitutions as its law. But it subsequently became infected with the high degrees, which were at one time so popular in Germany, and especially with the Strict Observance system of Von Hund, which it accepted in 1766. At the extinction of that system the Grand Lodge adopted one of its own, in doing which it was assisted by the labors of Dr. I. F. Zöllner, the Grand Master. Its Rite consists of seven high degrees added to the three primitive. The latter are under the control of the Grand Lodge; but the seven higher ones are governed by an Internal Supreme Orient, whose members are, however, elected by the Grand Lodge. The Rite is practised by about two hundred Lodges in Germany.

Three Grand Offerings. See *Ground Floor of the Lodge*.

Three Points. Three points in a triangular form (∴) are placed after letters in a Masonic document to indicate that such letters are the initials of a Masonic title or of a technical word in Masonry, as G.·. M.·. for Grand Master, or G.·. L.·. for Grand Lodge. It is not a symbol, but simply a mark of abbreviation. The attempt, therefore, to trace it to the Hebrew three yods, a Kabbalistic sign of the Tetragrammaton, or any other ancient symbol, is futile. It is an abbreviation, and nothing more; although it is probable that the idea was suggested by the sacred character of the number three as a Masonic number, and these three dots might refer to the position of the three officers in a French Lodge. Ragon says (*Orthod. Maçon.*, p. 71) that the mark was first used by the Grand Orient of France in a circular issued August 12, 1774, in which we read "G.·. O.·. de France." The abbreviation is now constantly used in French documents, and, although not accepted by the English Masons, has been very generally adopted in other countries. In the United States, the use of this abbreviation is gradually extending.

Three Sacred Utensils. These were the vessels of the Tabernacle as to which the Rev. Joseph Barclay, LL.D., makes the following quotation: "Rabbi José, son of Rabbi Judah, said a fiery ark, and a fiery table, and a fiery candlestick descended from heaven. And Moses saw them, and made according to their similitude"; and thus comments: "They also think that the Ark of the Covenant is concealed in a chamber under the Temple Enclosure, and that it and all the holy vessels will be found at the coming of the Messiah." The Apocrypha, however, informs us that Jeremiah laid the Tabernacle, and the Ark, and the Altar of Incense in a "hollow cave, in the mountain, where Moses climbed up and saw the heritage of God. And the place shall be unknown until the time that God gather his people again together, and receive them into Mercy." (2 Mac. ii. 4–7.) The sacred vessels, which were taken to Rome after the destruction of Jerusalem in A.D. 70, and are now seen sculptured on the Arch of Titus, were carried off to Africa by the Vandals under Genseric. Belisarius took them to Constantinople in A.D. 520. They were afterward sent back to Jerusalem, and thence they are supposed to have been carried to Persia, when Chosroes plundered the Holy City, in June, 614.

Three Senses. Of the five human senses, the three which are the most important in Masonic symbolism are Seeing, Hearing, and Feeling, because of their respective reference to certain modes of recognition, and because, by their use, Masons are enabled to practise that universal language the possession of which is the boast of the Order.

Three Steps. See *Steps on the Master's Carpet*.

Threshing-Floor. Among the Hebrews, circular spots of hard ground were used, as now, for the purpose of threshing corn. After they were properly prepared for the purpose, they became permanent possessions. One of these, the property of Ornan the Jebusite, was on Mount Moriah. It was purchased by David, for a place of sacrifice, for six hundred shekels of gold, and on it the Temple was afterward built. Hence it is sometimes used as a symbolic name for the Temple of

Solomon or for a Master's Lodge. Thus it is said in the ritual that the Mason comes "from the lofty tower of Babel, where language was confounded and Masonry lost," and that he is traveling "to the threshing-floor of Ornan the Jebusite, where language was restored and Masonry found." The interpretation of this rather abstruse symbolic expression is that on his initiation the Mason comes out of the profane world, where there is ignorance and darkness and confusion as there was at Babel, and that he is approaching the Masonic world, where, as at the Temple built on Ornan's threshing-floor, there is knowledge and light and order.

Throne. The seat occupied by the Grand Master in the Grand Lodge of England is called the *throne*, in allusion, probably, to the throne of Solomon. In American Grand Lodges it is styled the Oriental Chair of Solomon, a title which is also given to the seat of the Master of a subordinate Lodge.

In ecclesiology, the seat in a cathedral occupied by a bishop is called a throne; and in the Middle Ages, according to Du Cange, the same title was not only applied to the seats of bishops, but often also to those of abbots, or even priests who were in possession of titles or churches.

Thugs. A Hindu association that offered human sacrifices to their divinity Kali. It was dreaded for its violence and the fierceness of its members, who were termed either Stranglers or Aspirants.

Thummim. See *Urim and Thummim*.

Thurible. From Turis, frankincense; Ivos, a sacrifice. A metallic censer for burning incense. It is of various forms, but generally in that of an ornamental cup suspended by chains, whereby the Thurifer keeps the incense burning and diffuses the perfume.

Thurifer. The bearer of the thurible, or censer, prepared with frankincense, and used by the Romish Church at Mass and other ceremonials; as also in the Philosophic Degrees of Masonry.

Thursday. The fifth day of the week. So called from its being originally consecrated to Thor, or the Icelandic Thorr, the god of thunder, answering to the Jove of the Romans.

Tie. The first clause in the covenant of Masonry which refers to the preservation of the secrets is technically called the tie. It is substantially the same in the covenant of each degree, from the lowest to the highest.

Tie, Mystic. See *Mystic Tie*.

Tierce, De la. He was the first translator of Anderson's *Constitutions* into French, the manuscript of which he says that he prepared during his residence in London. He afterward published it at Frankfort, in 1743, with the title of *Histoire, obligations et statuts de la très venerable confraternité des Francs-Maçons, tirez de leur archives et conformés aux traditions les plus anciennes, etc.* His work contains a translation into French of the Old Charges—the General Regulations —and manner of constituting a new Lodge, as given by Anderson in 1723. De la Tierce is said to have been, while in London, an intimate friend of Anderson, the first edition of whose *Constitutions* he used when he compiled his manuscript in 1725. But he improved on Anderson's work by dividing the history in epochs. This course Anderson pursued in his second edition; which circumstance has led Schneider, in the *Neuen Journale zur Freimaurerei*, to suppose that, in writing that second edition, Anderson was aided by the previous labors of De la Tierce, of whose work he was most probably in possession.

Tile. A Lodge is said to be tiled when the necessary precautions have been taken to prevent the approach of unauthorized persons; and it is said to be the first duty of every Mason to see that this is done before the Lodge is opened. The word to tile is sometimes used in the same sense as *to examine*, as when it is said that a visitor has been tiled, that is, has been examined. But the expression is not in general use, and does not seem to be a correct employment of the term.

Tiler. An officer of a Symbolic Lodge, whose duty is to guard the door of the Lodge, and to permit no one to pass in who is not duly qualified, and who has not the permission of the Master.

A necessary qualification of a Tiler is, therefore, that he should be a Master Mason. Although the Lodge may be opened in an inferior degree, no one who has not advanced to the Third Degree can legally discharge the functions of Tiler.

As the Tiler is always compensated for his services, he is considered, in some sense, as the servant of the Lodge. It is, therefore, his duty to prepare the Lodge for its meetings, to arrange the furniture in its proper place, and to make all other arrangements for the convenience of the Lodge.

The Tiler need not be a member of the Lodge which he tiles; and in fact, in large cities, one brother very often performs the duties of Tiler of several Lodges.

This is a very important office, and, like that of the Master and Wardens, owes its existence, not to any conventional regulations, but to the very landmarks of the Order; for, from the peculiar nature of our Institution, it is evident that there never could have been a meeting of Masons for Masonic purposes, unless a Tiler had been present to guard the Lodge from intrusion.

The title is derived from the operative art; for as in Operative Masonry the Tiler, when the edifice is erected, finishes and covers it with the roof (of tiles), so in Speculative Masonry, when the Lodge is duly organized, the Tiler closes the door, and covers the sacred precincts from all intrusion.

Tiler's Oath. See *Oath, Tiler's*.

Tilly de Grasse. See *Grasse, Tilly de*.

Tiluk. The sacred impress made upon the forehead of the Brahman, like unto the Tau to the Hebrew, or the cross to the Christian.

Timbre. The French Masons so call a stamp, consisting of the initials or monogram of the Lodge, which is impressed in black or red ink upon every official document emanating from the Lodge. When such a document has the seal also attached, it is said to be "timbrée et scellée," i. e., stamped and sealed. The timbre, which differs from the seal, is not used in English or American Lodges.

Time. The image of Time, under the conventional figure of a winged old man with the customary scythe and hour-glass, has been adopted as one of the modern symbols in the Third Degree. He is represented as attempting to disentangle the ringlets of a weeping virgin who stands before him. This, which is apparently a never-ending task, but one which Time undertakes to perform, is intended to teach the Mason that time, patience and perseverance will enable him to accomplish the great object of a Mason's labor, and at last to obtain that true Word which is the symbol of Divine Truth. Time, therefore, is in this connection the symbol of well-directed perseverance in the performance of duty.

Time and Circumstances. The answer to the question in the ritual of initiation, "Has he made suitable proficiency?" is sometimes made, "Such as time and circumstances would permit." This is an error, and may be a mischievous one, as leading to a careless preparation of the candidate for qualification to advancement. The true reply is, "He has." (See *Advancement*, *Hurried*.)

Tirshatha. The title given to the Persian governors of Judea. It was borne by Zerubbabel and Nehemiah. It is supposed to be derived from the Persian *torsch*, austere or severe, and is therefore, says Gesenius, equivalent to "Your Severity." It is in the modern ritual of the Supreme Council for the Southern Jurisdiction of the United States the title of the presiding officer of a Council of Princes of Jerusalem. It is also the title of the presiding officer of the Royal Order of Heredom of Kilwinning.

Tisri. תשרי. The first month of the Hebrew civil year, and corresponding to the months of September and October, beginning with the new moon of the former.

Titan of the Caucasus. The Fifty-third Degree of the Memphis Rite.

Titles. The titles conferred in the rituals of Masonry upon various officers are often apparently grandiloquent, and have given occasion to some, who have not understood their true meaning, to call them absurd and bombastic. On this subject Bro. Albert Pike has, in the following remarks, given a proper significance to Masonic titles:

"Some of these titles we retain; but they have with us meanings entirely consistent with the spirit of equality, which is the foundation and peremptory law of its being, of all Masonry. The *Knight*, with us, is he who devotes his hand, his heart, his brain to the service of Masonry, and professes himself the sworn soldier of truth: the *Prince* is he who aims to be chief [Princeps], first, leader among his equals, in virtue and good deeds: the *Sovereign* is he who, one of an Order whose members are all sovereigns, is supreme only because the law and Constitutions are so which he administers, and by which he, like every other brother, is governed. The titles *Puissant*, *Potent*, *Wise*, and *Venerable* indicate that power of virtue, intelligence, and wisdom which those ought to strive to attain who are placed in high offices by the suffrages of their brethren; and all our other titles and designations have an esoteric meaning consistent with modesty and equality, and which those who receive them should fully understand."

Titles of Grand Lodges. The title of the Grand Lodge of England is "The United Grand Lodge of Ancient Free and Accepted Masons." That of Ireland, "The Grand Masonic Lodge." Of Scotland, "The Grand Lodge of the Ancient and Honorable Fraternity of Free and Accepted Masons." That of France is "The Grand Orient." The same title is taken by the Grand Lodges or Supreme Masonic authorities of Portugal, Belgium, Italy, Spain, and Greece, and also by the Grand Lodges of all the South American States. Of the German Grand Lodges, the only three that have distinctive titles are "The Grand National Mother Lodge of the Three Globes," "The Grand National Lodge of Germany," and "The Grand Lodge Royal York of Friendship." In Sweden and Denmark they are simply called "Grand Lodges." In the English possessions of North America they are also called "Grand Lodges." In the United States the title of the Grand Lodge of Maine, of Massachusetts, of Rhode Island, of Alabama, of Illinois, of Iowa, of Wisconsin, of Minnesota, and of Oregon, is the "Most Worshipful Grand Lodge of Ancient Free and Accepted Masons"; of New Hampshire, of Vermont, of New York, of New Jersey, of Pennsylvania, of Arkansas, and of Indiana, it is "The Grand Lodge of the Ancient and Honorable Fraternity of Free and Accepted Masons"; of Maryland, of the District of Columbia, of Florida, of Michigan, of Missouri, and of California, is "Grand Lodge of Free and Accepted Masons"; of South Carolina is "Most Worshipful Grand Lodge of Ancient Freemasons"; of all the other States the title is simply the "Grand Lodge."

Tito. A significant word in the high degrees. The Scottish Rite rituals give the name of Tito, Prince Harodim, to him who they say was the first who was appointed by Solomon a Provost and Judge. This person appears to be altogether mythical; the word is not found in the Hebrew language, nor has any meaning been given to it. He is represented as having been a favorite of the King of Israel. He is said to have presided over the Lodge of Intendants of the Building, and to have been one of the twelve illustrious knights who were set over the twelve tribes, that of Naphtali being placed under his care.

The whole of this legend is, of course, connected with the symbolic signification of those degrees.

Toasts. Anderson says (*Constitutions*, 1738, p. 110) that in 1719 Dr. Desaguliers, having been installed Grand Master, "forthwith revived the old, regular, and peculiar toasts or healths of the Freemasons." If Anderson's statements could be implicitly trusted as historical facts, we should have to conclude that a system of regulated toasts prevailed in the Lodges before the revival. The custom of drinking healths at banquets is a very old one, and can be traced to the days of the ancient Greeks and Romans. From them it was handed down to the moderns, and especially in England we find the "washael" of the Saxons, a term used in drinking, and equivalent to the modern phrase, "Your health." Steele, in the *Tatler*, intimates that the word *toast* began to be applied to the drinking of healths in the early part of the eighteenth century. And although his account of the origin of the word has been contested, it is very evident that the drinking of toasts was a universal custom in the clubs and festive associations which were common in London about the time of the revival of Masonry. It is therefore to be presumed that the Masonic Lodges did not escape the influences of the convivial spirit of that age, and drinking in the Lodge room during the hours of refreshment was a usual custom, but, as Oliver observes, all excess was avoided, and the convivialities of Masonry were regulated by the *Old Charges*, which directed the brethren to enjoy themselves with decent mirth, not forcing any brother to eat or drink beyond his inclination, nor hindering him from going home when he pleased. The drinking was conducted by rule, the Master giving the toast, but first inquiring of the Senior Warden, "Are you charged in the West, Brother Senior?" and of the Junior Warden, "Are you charged in the South, Brother Junior?" to which appropriate replies being made, the toast was drunk with honors peculiar to the Institution. In an old Masonic song, the following stanza occurs:

"'Are you charged in the West? are you charged
in the South?'
The Worshipful Master cries.
'We are charged in the West, we are charged
in the South,'
Each Warden prompt replies."

One of the catechetical works of the last century thus describes the drinking customs of the Masons of that period: "The table being plentifully supplied with wine and punch, every man has a glass set before him, and fills it with what he chooses. But he must drink his glass in turn, or at least keep the motion with the rest When, therefore, a public health is given, the Master fills first, and desires the brethren to charge their glasses; and when this is supposed to be done, the Master says, *Brethren, are you all charged?* The Senior and Junior Wardens answer, *We are all charged in the South and West.* Then they all stand up, and, observing the Master's motions, (like the soldier his right-hand man,) drink their glasses off." Another work of the same period says that the first toast given was "the King and the Craft." But a still older work gives what it calls "A Free-Mason's Health" in the following words: "Here's a health to our society and to every faithful brother that keeps his oath of secrecy. As we are sworn to love each other, the world no Order knows like this our noble and ancient Fraternity. Let them wonder at the Mystery. Here, Brother, I drink to thee."

In time the toasts improved in their style, and were deemed of so much importance that lists of them, for the benefit of those who were deficient in inventive genius, were published in all the pocketbooks, calendars, and song books of the Order. Thus a large collection is to be found in the *Masonic Miscellanies* of Stephen Jones. A few of them will show their technical character: "To the secret and silent"; "To the memory of the distinguished Three"; "To all that live within compass and square"; "To the memory of the Tyrian artist"; "To him that first the work began," etc.

But there was a regular series of toasts which, besides these voluntary ones, were always given at the refreshments of the brethren. Thus, when the reigning sovereign happened to be a member of the Fraternity, the first toast given was always "The King and the Craft."

In the French Lodges the drinking of toasts was, with the word itself, borrowed from England. It was, however, subjected to strict rules, from which there could be no departure. Seven toasts were called "Santés d'obligation," because drinking them was made obligatory, and could not be omitted at the Lodge banquet. They were as follows: 1. The health of the Sovereign and his family; 2. That of the Grand Master and the chiefs of the Order; 3. That of the Master of the Lodge; 4. That of the Wardens; 5. That of the other officers; 6. That of the visitors; 7. That of all Masons wheresoever spread over the two hemispheres. In 1872, the Grand Orient, after long discussions, reduced the number of *santés d'obligation* from seven to four, and changed their character. They are now: 1. To the Grand Orient of France, the Lodges of its correspondence, and foreign Grand Orients; 2. To the Master of the Lodge; 3. To the Wardens, the officers, affiliated Lodges, and visiting brethren; 4. To all Masons existing on each hemisphere.

The systematized method of drinking toasts, which once prevailed in the Lodges of the English-speaking countries, has been, to a great extent, abandoned; yet a few toasts still remain, which, although not absolutely obligatory, are still never omitted. Thus no Masonic Lodge would neglect at its banquet to offer, as its first toast, a sentiment expressive of respect for the Grand Lodge.

The venerable Oliver was a great admirer of the custom of drinking Masonic toasts, and

panegyrizes it in his *Book of the Lodge* (p. 147). He says that at the time of refreshment in a Masonic Lodge "the song appeared to have more zest than in a private company; the toast thrilled more vividly upon the recollection; and the small modicum of punch with which it was honored retained a higher flavor than the same potation if produced at a private board." And he adds, as a specimen, the following "characteristic toast," which he says was always received with a "profound expression of pleasure."

"To him that all things understood,
To him that found the stone and wood,
To him that hapless lost his blood,
In doing of his duty,
To that blest age and that blest morn
Whereon those three great men were born,
Our noble science to adorn
With Wisdom, Strength, and Beauty."

It is not surprising that he should afterward pathetically deplore the discontinuance of the custom.

Token. The word *token* is derived from the Anglo-Saxon *tacn*, which means a sign, presage, type, or representation, that which points out something; and this is traced to *tæcan*, to teach, show, or instruct, because by a token we show or instruct others as to what we are. Bailey, whose *Dictionary* was published soon after the revival, defines it as "a sign or mark"; but it is singular that the word is not found in either of the dictionaries of Phillips or Blount, which were the most popular glossaries in the beginning of the last century. The word was, however, well known to the Fraternity, and was in use at the time of the revival with precisely the same meaning that is now given to it as a mode of recognition.

The Hebrew word אוֹת, *ōth*, is frequently used in Scripture to signify a sign or memorial of something past, some covenant made or promise given. Thus God says to Noah, of the rainbow, "it shall be for a *token* of a covenant between me and the earth"; and to Abraham he says of circumcision, "it shall be a *token* of the covenant betwixt me and you." In Masonry, the grip of recognition is called a token, because it is an outward sign of the covenant of friendship and fellowship entered into between the members of the Fraternity, and is to be considered as a memorial of that covenant which was made, when it was first received by the candidate, between him and the Order into which he was then initiated.

Neither the French nor the German Masons have a word precisely equivalent to token. Krause translates it by *merkmale*, a sign or representation, but which has no technical Masonic signification. The French have only *attouchement*, which means the act of touching; and the Germans, *griff*, which is the same as the English *grip*. In the technical use of the word *token*, the English-speaking Masons have an advantage not possessed by those of any other country.

Tolerance Lodge. When the initiation of Jews was forbidden in the Prussian Lodges, two brethren of Berlin, Von Hirschfeld and Catter, induced by a spirit of toleration, organized a Lodge in Berlin for the express purpose of initiating Jews, to which they gave the appropriate name of Tolerance Lodge. This Lodge was not recognized by the Masonic authorities.

Toleration. The grand characteristic of Masonry is its toleration in religion and politics. In respect to the latter, its toleration has no limit. The question of a man's political opinions is not permitted to be broached in the Lodge; in reference to the former, it requires only that, to use the language of the *Old Charge*, Masons shall be of "that religion in which all men agree, leaving their particular opinions to themselves." (*Constitutions*, 1723, p. 50.) The same *Old Charges* say, "No private piques or quarrels must be brought within the door of the Lodge, far less any quarrels about religion, or nations, or state policy, we being only, as Masons, of the Catholic religion above-mentioned; we are also of all nations, tongues, kindreds, and languages, and are resolved against all politics, as what never yet conduced to the welfare of the Lodge, nor ever will." (*Ibid.*, p. 54.)

Tomb of Adoniram. Margoliouth, in his *History of the Jews*, tells the legend that at Saguntum, in Spain, a sepulcher was found four hundred years ago, with the following Hebrew inscription: "This is the grave of Adoniram, the servant of King Solomon, who came to collect the tribute, and died on the day—" Margoliouth, who believes the mythical story, says that the Jesuit Villepandus, being desirous of ascertaining if the statements concerning the tomb were true, directed the Jesuit students who resided at Murviedro, a small village erected upon the ruins of Saguntum, to make diligent search for the tomb and inscription. After a thorough investigation, the Jesuit students were shown a stone on which appeared a Hebrew inscription, much defaced and nearly obliterated, which the natives stated was "*the stone of Solomon's collector.*" Still unsatisfied, they made further search, and discovered a manuscript written in antique Spanish, and carefully preserved in the citadel, in which the following entry was made: "At Saguntum, in the citadel, in the year of our Lord 1480, a little more or less, was discovered a sepulchre of surprising antiquity. It contained an embalmed corpse, not of the usual stature, but taller than is common. It had and still retains on the front two lines in the Hebrew language and characters, the sense of which is: 'The sepulchre of Adoniram, the servant of King Solomon, who came hither to collect tribute.'"

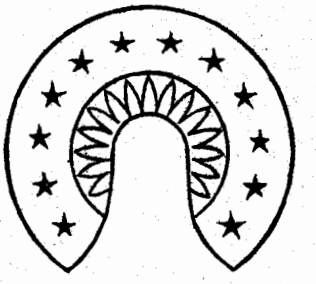
The story has far more the appearance of a Talmudic or a Rosicrucian legend than that of an historical narrative.

Tomb of Hiram Abif. All that is said of it in Masonry is more properly referred to in the article on the *Monument in the Third Degree*. (See *Monument*.)

Tomb of Hiram of Tyre. Five miles to the east of the city of Tyre is an ancient monu-

ment, called by the natives Kabr Hairan, or the tomb of Hiram. The tradition that the King of Tyre was there interred rests only on the authority of the natives. It bears about it, however, the unmistakable marks of extreme antiquity, and, as Thompson says (*The Land and The Book*, p. 196), there is nothing in the monument itself inconsistent with the idea that it marks the final resting-place of that friend of Solomon. He thus describes it: "The base consists of two tiers of great stones, each three feet thick, thirteen feet long, and eight feet eight inches broad. Above this is one huge stone, a little more than fifteen feet long, ten broad, and three feet four inches thick. Over this is another, twelve feet three inches long, eight broad, and six high. The top stone is a little smaller every way, and only five feet thick. The entire height is twenty-one feet. There is nothing like it in this country, and it may well have stood, as it now does, ever since the days of Solomon. These large broken sarcophagi scattered around it are assigned by tradition to Hiram's mother, wife, and family."

Dr. Morris, who visited the spot in 1868, gives a different admeasurement, which is probably more accurate than that of Thompson. According to him, the first tier is 14 ft. long, 8 ft. 8 in. broad, 4 ft. thick. Second tier, 14 ft. long, 8 ft. 8 in. broad, 2 ft. 10 in. thick. Third tier, 15 ft. 1 in. long, 9 ft. 11 in. broad, 2 ft. 11 in. thick. Fourth tier, 12 ft. 11 in. long, 7 ft. 8 in. broad, 6 ft. 5 in. thick. Fifth tier, 12 ft. 11 in. long, 7 ft. 8 in. broad, and 3 ft. 6 in. thick. He makes the height of the whole 19 ft. 8 in.



Travelers have been disposed to give more credit to the tradition which makes this monument the tomb of the King of Tyre than to most of the other legends which refer to ancient sepulchers in the Holy Land.

Tongue. In the early rituals of the last century, the tongue is called the key to the secrets of a Mason; and one of the toasts that was given in the Lodge was in these words: "To that excellent key of a Mason's tongue, which ought always to speak as well in the absence of a brother as in his presence; and when that cannot be done with honor, justice, or propriety, that adopts the virtue of a Mason, which is silence."

Tongue of Good Report. Being "under the tongue of good report" is equivalent, in Masonic technical language, to being of good character or reputation. It is required that the candidate for initiation should be one of whom no tongue speaks evil. The phrase is an old one, and is found in the earliest rituals of the last century.

Topaz. In Hebrew, פטדה, *pitdah*. It was the second stone in the first row of the high priest's breastplate, and was referred to Simeon. The ancient topaz, says King (*Antique Gems*, p. 56), was the present chrysolite, which was furnished from an island in the Red Sea. It is of a bright greenish yellow, and the softest of all precious stones.

Topes. Pillars, also signifying towers and tumuli. This is a corruption of the Sanskrit word Stoopa, meaning mounds, heaps, karns. The Topes of the Karli temple, a Buddhist shrine, which may be seen up the Western Ghats from Bombay to Poona, are presumed to be Phallic pillars placed in front, precisely as Solomon placed his Jachin and Boaz. Some travelers state that only one of these pillars stands at present. The pillars were shaft plain, with a capital carrying four lions, representing power and cat-like salaciousness. Between

these pillars may be seen the great window which lights all the Temple, arched in the form of a horseshoe, which is the Isian headdress and Maiya's holy sign, and after which the Roman Church adopts one of Mary's favorite head-dresses. It is the "crown of Venus Urania."

These pillars are prominent features of Buddhist sacred buildings, and when composed of a single stone are called a Lat. They are frequently ornamented with honeysuckles. The oldest monument hitherto discovered in India is a group of these monoliths set up by Asoka in the middle of the third century B.C. They were all alike in form, inscribed with four short edicts containing the creed and principal doctrines of Buddhism. These pillars stood originally in front of some sacred buildings which have perished; they are polished, 45 feet each in height, and surmounted by lions. The Thuparamya Tope, in Ceylon, has 184 handsome monoliths, 26 feet in height, round the *center holy mound*.

Torch-Bearer. The fifteenth officer in the High Council of the Society of Rosicrucians; also known as an officer in the Appendant Order of the Holy Sepulcher. One who bears a torch.

Torches. The ancients made use of torches both at marriages and funerals. They were also employed in the ceremonies of the Eleusinian mysteries. They have been introduced into the high degrees, especially on the Continent, principally as marks of honor in the reception of distinguished visitors, on which occasion they are technically called "stars." Du Cange mentions their use during the Middle Ages on funeral occasions.

Torgau, Constitutions of. Torgau is a fortified town on the Elbe, in the Prussian Province of Saxony. It was there that Luther and his friends wrote the *Book of Torgau*, which was the foundation of the subsequent Augsburg Confession, and it was there that the

Lutherans concluded a league with the Elector Frederick the Wise. The Stone-Masons, whose seat was there in the fifteenth century, had, with the other Masons of Saxony, accepted the Constitutions enacted in 1459 at Strasburg. But, finding it necessary to make some special regulations for their own internal government, they drew up, in 1462, Constitutions in 112 articles, which are known as the "Torgau Ordinances." A duplicate of these Constitutions was deposited, in 1486, in the Stone-Mason's *hutte* at Rochlitz. An authenticated copy of this document was published by C. L. Stieglitz at Leipsic, in 1829, in a work entitled *Ueber die Kirche der heiligen Kunigunde zu Rochlitz und die Steinmetzhütte daselbst* An abstract of these Ordinances, with critical comparisons with other Constitutions, was published by Kloss in his *Die Freimaurerei in ihrer wahren Bedeutung*. The Torgau Ordinances are important because, with those of Strasburg, they are the only authentic Constitutions of the German Stone-Masons extant except the Brother-Book of 1563.

Torrubia, Joseph. A Franciscan monk, who in 1751 was the censor and reviser of the Inquisition in Spain. Torrubia, that he might be the better enabled to carry into effect a persecution of the Freemasons, obtained under an assumed name, and in the character of a secular priest, initiation into one of the Lodges, having first received from the Grand Penitentiary a dispensation for the act, and an absolution from the oath of secrecy. Having thus acquired an exact list of the Lodges in Spain, and the names of their members, he caused hundreds of Masons to be arrested and punished, and succeeded in having the Order prohibited by a decree of King Ferdinand VI. Torrubia combined in his character the bigotry of the priest and the villainy of the traitor.

Tournon, M. A Frenchman and Freemason, who had been invited into Spain by the government in order to establish a manufactory of brass buttons, and to instruct the Spanish workmen. In 1757 he was arrested by the Inquisition on the charge of being a Freemason, and of having invited his pupils to join the Institution. He was sentenced to imprisonment for one year, after which he was banished from Spain, being conducted under an escort to the frontiers of France. Tournon was indebted for this clemency to his want of firmness and fidelity to the Order—he having solemnly abjured it, and promised never again to attend its assemblies. Llorente, in his *History of the Inquisition*, gives an account of Tournon's trial.

Tow, Cable. See *Cable Tow*.

Tower, Degree of the. (*Grade de la Tour.*) A name sometimes given to the Second Degree of the Royal Order of Scotland.

Tower of Babel. See *Babel*.

Town, Salem. The Rev. Salem Town, LL.D., was born at Belchertown, in the State of Massachusetts, March 5, 1779. He received a classical education, and obtained at college the degree of Master of Arts, and later in life that of Doctor of Laws. For some years he was the Principal of an academy, and his writings give the evidence that he was endowed with more than ordinary abilities. He was ardently attached to Freemasonry, and was for many years Grand Chaplain of the Grand Lodge and Grand Chapter, and Grand Prelate of the Grand Commandery of New York. In 1818 he published a small work, of two hundred and eighty-three pages, entitled *A System of Speculative Masonry*. This work is of course tinged with all the legendary ideas of the origin of the Institution which prevailed at that period, and would not now be accepted as authoritative; but it contains, outside of its historical errors, many valuable and suggestive thoughts. Bro. Town was highly respected for his many virtues, the consistency of his life, and his unwearied devotion to the Masonic Order. He died at Greencastle, Indiana, February 24, 1864, at the ripe age of eighty-nine years.

Townshend, Simeon. The putative author of a book entitled *Observations and Inquiries relating to the Brotherhood of the Free Masons*, which is said to have been printed at London in 1712. Boileau, Levèsque, Thory, Oliver, and Kloss mention it by name. None of them, however, appear to have seen it. Kloss calls it a doubtful book. If such a work is in existence, it will be a valuable and much needed contribution to the condition of Masonry in the south of England just before the revival, and may tend to settle some mooted questions. Levèsque (*Aperçu*, p. 47) says he has consulted it; but his manner of referring to it throws suspicion on the statement, and it is doubtful if he ever saw it.

Tracing-Board. The same as a *Floor-Cloth*, which see.

Trade-Gilds. See *Gilds*.

Tradition. There are two kinds of traditions in Masonry: First, those which detail events, either historically, authentic in part, or in whole, or consisting altogether of arbitrary fiction, and intended simply to convey an allegorical or symbolic meaning; and secondly, of traditions which refer to customs and usages of the Fraternity, especially in matters of ritual observance.

The first class has already been discussed in this work in the article on *Legend*, to which the reader is referred. The second class is now to be considered.

The traditions which control and direct the usages of the Fraternity constitute its unwritten law, and are almost wholly applicable to its ritual, although they are sometimes of use in the interpretation of doubtful points in its written law. Between the written and the unwritten law, the latter is always paramount. This is evident from the definition of a tradition as it is given by the monk Vincent of Lerins: "Quod semper, quod ubique, quod ab omnibus traditum est"; i. e., tradition is that which has been handed down at all times, and in all places, and by all persons. The law which thus has antiquity, universality, and common consent for its support, must override

all subsequent laws which are modern, local, and have only partial agreement.

It is then important that those traditions of Masonry which prescribe its ritual observances and its landmarks should be thoroughly understood, because it is only by attention to them that uniformity in the esoteric instruction and work of the Order can be preserved.

Cicero has wisely said that a well-constituted commonwealth must be governed not by the written law alone, but also by the unwritten law or tradition and usage; and this is especially the case, because the written law, however perspicuous it may be, can be diverted into various senses, unless the republic is maintained and preserved by its usages and traditions, which, although mute and as it were dead, yet speak with a living voice, and give the true interpretation of that which is written.

This axiom is not less true in Masonry than it is in a commonwealth. No matter what changes may be made in its statutes and regulations of to-day and its recent customs, there is no danger of losing the identity of its modern with its ancient form and spirit while its traditions are recognized and maintained.

Tramping Masons. Unworthy members of the Order, who, using their privileges for interested purposes, traveling from city to city and from Lodge to Lodge, that they may seek relief by tales of fictitious distress, have been called "tramping Masons." The true brother should ever obtain assistance; the tramper should be driven from the door of every Lodge or the house of every Mason where he seeks to intrude his imposture.

Transfer of Warrant. The English Constitutions (Rule 221) enact that "No warrant can be transferred under any circumstances." Similarly the Scotch Constitution (Rule 148) says "A Charter cannot be transferred under any circumstances."

Transient Brethren. Masons who do not reside in a particular place, but only temporarily visit it, are called "transient brethren." They are, if worthy, to be cordially welcomed, but are never to be admitted into a Lodge until, after the proper precautions, they have been proved to be "true and trusty." This usage of hospitality has the authority of all the Old Constitutions, which are careful to inculcate it. Thus the Lansdowne MS. charges "that every Mason receive or cherish Strange Fellows when they come over the countrey, and sett them on worke if they will worke, as the manner is, (that is to say) if the Mason have any moulde stone in his place, on worke; and if he have none, the Mason shall refresh him with money unto the next Lodge."

Although Speculative Masons no longer visit Lodges for the sake of work or wages, the usage of our Operative predecessors has been spiritualized in our symbolic system. Hence visitors are often invited to take a part in the labors of the Lodge, and receive their portion of the light and truth which constitute the symbolic pay of a Speculative Mason.

Transition Period. Findel calls that period in the history of Masonry, when it was gradually changing its character from that of an Operative to that of a Speculative society, "the Transition Period." It began in 1600, and terminated in 1717 by the establishment of the Grand Lodge of England in London, after which, says Findel (*Hist.*, English translation, p. 131), "modern Freemasonry was now to be taught as a spiritualizing art, and the Fraternity of Operative Masons was exalted to a Brotherhood of symbolic builders, who, in the place of visible, perishable temples, are engaged in the erection of that one, invisible, eternal temple of the heart and mind."

Transmission, Charter of. A deed said to have been granted by James de Molay, just before his death, to Mark Larmenius, by which he transmitted to him and to his successors the office of Grand Master of the Templars. It is the foundation-deed of the "Order of the Temple." After having disappeared for many years it was rediscovered and purchased by Bro. F. I. W. Crowe of Chichester, England, who thought it too important and valuable to remain in private hands, and it is now in the possession of the Great Priory of England. It is written in a Latin cipher on a large folio sheet of parchment. The outward appearance of the document is of great antiquity, but it lacks internal evidence of authenticity. It is, therefore, by most authorities, considered a forgery. (See *Temple, Order of the.*)

Trappists, Order of Religious. An order founded by that devotee of secret organizations, Count La Perche, in 1140.

Travel. In the symbolic language of Masonry, a Mason always travels from west to east in search of light—he travels from the lofty tower of Babel, where language was confounded and Masonry lost, to the threshing-floor of Ornan the Jebusite, where language was restored and Masonry found. The Master Mason also travels into foreign countries in search of wages. All this is pure symbolism, unintelligible in any other sense. For its interpretation, see *Foreign Country* and *Threshing-Floor.*

Traveling Masons. There is no portion of the history of the Order so interesting to the Masonic scholar as that which is embraced by the Middle Ages of Christendom, beginning with about the tenth century, when the whole of civilized Europe was perambulated by those associations of workmen, who passed from country to country and from city to city under the name of "Traveling Masons," for the purpose of erecting religious edifices. There is not a country of Europe which does not at this day contain honorable evidences of the skill and industry of our Masonic ancestors. I therefore propose, in the present article, to give a brief sketch of the origin, the progress, and the character of these traveling architects.

Mr. George Godwin, in a lecture published in the *Builder* (vol. ix., p. 463), says: "There are few points in the Middle Ages more pleasing to look back upon than the existence of the associated Masons; they are the bright spot

in the general darkness of that period, the patch of verdure when all around is barren."

Clavel, in his *Histoire Pittoresque de la Franc-Maçonnerie*, has traced the organization of these associations to the "collegia artificum," or colleges of artisans, which were instituted at Rome, by Numa, in the year B.C. 714, and whose members were originally Greeks, imported by this lawgiver for the purpose of embellishing the city over which he reigned. They continued to exist as well-established corporations throughout all the succeeding years of the kingdom, the republic, and the empire. (See *Roman Colleges of Artificers.*)

These "sodalitates," or fraternities, began, upon the invasion of the barbarians, to decline in numbers, in respectability, and in power. But on the conversion of the whole empire, they, or others of a similar character, began again to flourish. The priests of the Christian church became their patrons, and under their guidance they devoted themselves to the building of churches and monasteries. In the tenth century, they were established as a free gild or corporation in Lombardy. For when, after the decline and fall of the empire, the city of Rome was abandoned by its sovereigns for other secondary cities of Italy, such as Milan and Ravenna, and new courts and new capitals were formed, the kingdom of Lombardy sprang into existence as the great center of all energy in trade and industry, and of refinement in art and literature. Como was a free republic to which many fled during the invasions of the Vandals and Goths. It was in Lombardy, as a consequence of the great center of life from Rome, and the development not only of commercial business, but of all sorts of trades and handicrafts, that the corporations known as gilds were first organized.

Among the arts practised by the Lombards, that of building held a preeminent rank. And Muratori tells us that the inhabitants of Como, a principal city of Lombardy, Italy, had become so superior as masons, that the appellation of Magistri Comacini, or Masters from Como, had become generic to all of the profession.

Mr. Hope, in his *Historical Essay on Architecture*, has treated this subject almost exhaustively. He says:

"We cannot then wonder that, at a period when artificers and artists of every class, from those of the most mechanical, to those of the most intellectual nature, formed themselves into exclusive corporations, architects—whose art may be said to offer the most exact medium between those of the most urgent necessity, and those of mere ornament, or, indeed, in its wide span to embrace both—should, above all others, have associated themselves into similar bodies, which, in conformity to the general style of such corporations, assumed that of Free and Accepted Masons, and was composed of those members who, after a regular passage through the different fixed stages of apprenticeship, were received as masters, and entitled to exercise the profession on their own account.

"In an age, however, in which lay individuals, from the lowest subject to the sovereign himself, seldom built except for mere shelter and safety—seldom sought, nay, rather avoided, in their dwellings an elegance which might lessen their security; in which even the community collectively, in its public and general capacity, divided into component parts less numerous and less varied, required not those numerous public edifices which we possess either for business or pleasure; thus, when neither domestic nor civic architecture of any sort demanded great ability or afforded great employment, churches and monasteries were the only buildings required to combine extent and elegance, and sacred architecture alone could furnish an extensive field for the exercise of great skill, Lombardy itself, opulent and thriving as it was, compared to other countries, soon became nearly saturated with the requisite edifices, and unable to give these companies of Free and Accepted Masons a longer continuance of sufficient custom, or to render the further maintenance of their exclusive privileges of great benefit to them at home. But if, to the south of the Alps, an earlier civilization had at last caused the number of architects to exceed that of new buildings wanted, it fared otherwise in the north of Europe, where a gradually spreading Christianity began on every side to produce a want of sacred edifices, of churches and monasteries, to design which architects existed not on the spot.

"Those Italian corporations of builders, therefore, whose services ceased to be necessary in the countries where they had arisen, now began to look abroad towards those northern climes for that employment which they no longer found at home: and a certain number united and formed themselves into a single greater association, or fraternity, which proposed to seek for occupation beyond its native land; and in any ruder foreign region, however remote, where new religious edifices and skilful artists to erect them, were wanted to offer their services, and bend their steps to undertake the work."

From Lombardy they passed beyond the Alps into all the countries where Christianity, but recently established, required the erection of churches. A monopoly was granted to them for the erection of all religious edifices; they were declared independent of the sovereigns in whose dominions they might be temporarily residing, and subject only to their own private laws; they were permitted to regulate the amount of their wages; were exempted from all kinds of taxation; and no Mason, not belonging to their association, was permitted to compete with or oppose them in the pursuit of employment.

After filling the Continent with cathedrals, parochial churches, and monasteries, and increasing their own numbers by accessions of new members from all the countries in which they had been laboring, they passed over into England, and there introduced their peculiar style of building. Thence they traveled to

Scotland, and there have rendered their existence ever memorable by establishing, in the parish of Kilwinning, where they were erecting an abbey, the germ of Scottish Freemasonry, which has regularly descended through the Grand Lodge of Scotland to the present day.

Mr. Hope accounts for the introduction of non-working or unprofessional members into these associations by a theory which is confirmed by contemporary history. He says:

"Often obliged, from regions the most distant, singly to seek the common place of rendezvous and departure of the troop, or singly to follow its earlier detachments to places of employment equally distant; and that, at an era when travellers met on the road every obstruction, and no convenience, when no inns existed at which to purchase hospitality, but lords dwelt everywhere, who only prohibited their tenants from waylaying the traveller because they considered this, like killing game, one of their own exclusive privileges; the members of these communities contrived to render their journeys more easy and safe, by engaging with each other, and perhaps even, in many places, with individuals not directly participating in their profession, in compacts of mutual assistance, hospitality and good services, most valuable to men so circumstanced. They endeavored to compensate for the perils which attended their expeditions, by institutions for their needy or disabled brothers; but lest such as belonged not to their communities should benefit surreptitiously by these arrangements for its advantage, they framed signs of mutual recognition, as carefully concealed from the knowledge of the uninitiated, as the mysteries of their art themselves. Thus supplied with whatever could facilitate such distant journeys and labors as they contemplated, the members of these corporations were ready to obey any summons with the utmost alacrity, and they soon received the encouragement they anticipated. The militia of the Church of Rome, which diffused itself all over Europe in the shape of missionaries, to instruct nations, and to establish their allegiance to the Pope, took care not only to make them feel the want of churches and monasteries, but likewise to learn the manner in which the want might be supplied. Indeed, they themselves generally undertook the supply; and it may be asserted, that a new apostle of the Gospel no sooner arrived in the remotest corner of Europe, either to convert the inhabitants to Christianity, or to introduce among them a new religious order, than speedily followed a tribe of itinerant Freemasons to back him, and to provide the inhabitants with the necessary places of worship or reception.

"Thus ushered in, by their interior arrangements assured of assistance and of safety on the road, and, by the bulls of the Pope and the support of his ministers abroad, of every species of immunity and preference at the place of their destination, bodies of Freemasons dispersed themselves in every direction, every day began to advance further, and to proceed from country to country, to the utmost verge of the faithful, in order to answer the increasing demand for them, or to seek more distant custom."

The government of these fraternities, wherever they might be for the time located, was very regular and uniform. When about to commence the erection of a religious edifice, they first built huts, or, as they were termed, lodges, in the vicinity, in which they resided for the sake of economy as well as convenience. It is from these that the present name of our places of meeting is derived. Over every ten men was placed a warden, who paid them wages, and took care that there should be no needless expenditure of materials and no careless loss of implements. Over the whole, a surveyor or master, called in their old documents "magister," presided, and directed the general labor.

The Abbé Grandidier, in a letter at the end of the Marquis Luchet's *Essai sur les Illuminés*, has quoted from the ancient register of the Masons at Strasburg the regulations of the association which built the splendid cathedral of that city. Its great rarity renders it difficult to obtain a sight of the original work, but the *Histoire Pittoresque* of Clavel supplies the most prominent details of all that Grandidier has preserved. The cathedral of Strasburg was commenced in the year 1277, under the direction of Erwin of Steinbach. The Masons who, under his directions, were engaged in the construction of this noblest specimen of the Gothic style of architecture, were divided into the separate ranks of Masters, Craftsmen, and Apprentices. The place where they assembled was called a "hutte," a German word equivalent to our English term lodge. They employed the implements of masonry as emblems, and wore them as insignia. They had certain signs and words of recognition, and received their new members with peculiar and secret ceremonies, admitting, as has already been said, many eminent persons, and especially ecclesiastics, who were not Operative Masons, but who gave to them their patronage and protection.

The fraternity of Strasburg became celebrated throughout Germany, their superiority was acknowledged by the kindred associations, and they in time received the appellation of the "haupt hutte," or Grand Lodge, and exercised supremacy over the *hutten* of Suabia, Hesse, Bavaria, Franconia, Saxony, Thuringia, and the countries bordering on the river Moselle. The Masters of these several Lodges assembled at Ratisbon in 1459, and on the 25th of April contracted an act of union, declaring the chief of the Strasburg Cathedral the only and perpetual Grand Master of the General Fraternity of Freemasons of Germany. This act of union was definitely adopted and promulgated at a meeting held soon afterward at Strasburg.

Similar institutions existed in France and in Switzerland, for wherever Christianity had penetrated, there churches and cathedrals were to be built, and the Traveling Freemasons hastened to undertake the labor.

They entered England and Scotland at an early period. Whatever may be thought of the authenticity of the York and Kilwinning legends, there is ample evidence of the existence of organized associations, gilds, or corporations of Operative Masons at an epoch not long after their departure from Lombardy. From that period, the fraternity, with various intermissions, continued to pursue their labors, and constructed many edifices which still remain as monuments of their skill as workmen and their taste as architects. Kings, in many instances, became their patrons, and their labors were superintended by powerful noblemen and eminent prelates, who, for this purpose, were admitted as members of the fraternity. Many of the old Charges for the better government of their Lodges have been preserved, and are still to be found in our Books of Constitutions, every line of which indicates that they were originally drawn up for associations strictly and exclusively operative in their character.

In glancing over the history of this singular body of architects, we are struck with several important peculiarities.

In the first place, they were strictly ecclesiastical in their constitution. The Pope, the supreme pontiff of the Church, was their patron and protector. They were supported and encouraged by bishops and abbots, and hence their chief employment appears to have been in the construction of religious edifices.

They were originally all operatives. But the artisans of that period were not educated men, and they were compelled to seek among the clergy, the only men of learning, for those whose wisdom might contrive, and whose cultivated taste might adorn, the plans which they, by their practical skill, were to carry into effect. Hence the germ of that Speculative Masonry which, once dividing the character of the fraternity with the Operative, now completely occupies it, to the entire exclusion of the latter.*

But lastly, from the circumstance of their union and concert arose a uniformity of design in all the public buildings of that period—a uniformity so remarkable as to find its explanation only in the fact that their construction was committed throughout the whole of Europe, if not always to the same individuals, at least to members of the same association. The remarks of Mr. Hope on this subject are well worthy of perusal. "The architects of all the sacred edifices of the Latin church, wherever such arose,—north, south, east, or west,—thus derived their science from the same central school; obeyed in their designs the same hierarchy; were directed in their constructions by the same principles of propriety and taste; kept up with each other, in the most distant parts to which they might be sent, the most constant correspondence; and rendered every minute improvement the property of the whole body and a new conquest of the art. The result of this unanimity was, that at each successive period of the monastic dynasty, on whatever point a new church or new monastery might be erected, it resembled all those raised at the same period in every other place, however distant from it, as if both had been built in the same place by the same artist. For instance, we find, at particular epochs, churches as far distant from each other as the north of Scotland and the south of Italy, to be minutely similar in all the essential characteristics."

In conclusion, we may remark, that the world is indebted to this association for the introduction of the Gothic, or, as it has lately been denominated, the pointed style of architecture. This style—so different from the Greek and Roman orders, whose pointed arches and minute tracery distinguish the solemn temples of the olden time, and whose ruins arrest the attention and claim the admiration of the spectator—has been universally acknowledged to be the invention of the Traveling Freemasons of the Middle Ages.

And it is to this association of Operative artists that, by gradual changes into a speculative system, we are to trace the Freemasons of the present day.

Traveling Warrants. Warrants under which military Lodges are organized, and so called because the Lodges which act under them are permitted to travel from place to place with the regiments to which they are attached. (See *Military Lodges.*)

Travenol, Louis. A zealous and devoted French Mason of much ability, who wrote several Masonic works, which were published under the assumed name of Leonard Gabanon. The most valuable of his productions is one entitled *Catechisme des Francs-Maçons, precédé d'un Abrégé de l'Histoire d'Adoram, etc.*, published at Paris in 1743.

Treasure, Incomparable. This was a phrase of mystical import with the alchemists and Hermetic philosophers. Pernetty (*Dictionnaire Mytho-Hermétique*) thus defines it: "The incomparable treasure is the powder of projection, the source of all that is good, since it procures unbounded riches, and a long life, without infirmities, to enjoy them." The "powder of projection" was the instrument by which they expected to attain to the full perfection of their work. What was this incomparable treasure was the great secret of the Hermetic philosophers. They concealed the true object of their art under a symbolic language. "Believest thou, O fool," says Artephius, one of them, "that we plainly teach this secret of secrets, taking our words according to their literal signification?" But we do know that it was not, as the world supposed, the

* There probably never was a time when the Operative Masons did not furnish the architect. When an ecclesiastic performed this function it was an exception, and there were few of them. The profession of the architect seems to have been a distinct profession since Theoderic established himself at Ravenna (493), and appointed an official architect. All through the Lombard period and at all later periods the architect or Master was distinctive.

[E. E. C.]

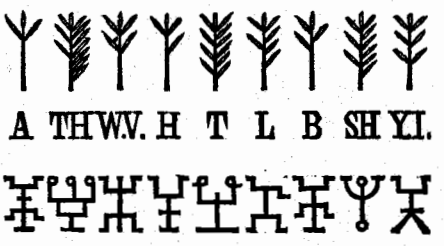
transmutation of metals, or the discovery of an elixir of life, but the acquisition of Divine truth.

Many of the high degrees which were fabricated in the last century were founded on the Hermetic philosophy; and they, too, borrowed from it the idea of an incomparable treasure. Thus in the ultimate degree of the Council of Emperors of the East and West, which degree became afterward the Sublime Prince of the Royal Secret of the Scottish Rite, we find this very expression. In the old French rituals we meet with this sentence: "Let us now offer to the invincible Xerxes our sacred *incomparable treasure*, and we shall succeed victoriously." And out of the initial letters of the words of this sentence in the original French they fabricated the three most important words of the degree.

This "incomparable treasure" is to the Masons precisely what it was to the Hermetic philosophers—Divine Truth. "As for the Treasure," says one of these books (the *Lumen de Lumine*, cited by Hitchcock), "it is not yet discovered, but it is very near."

Treasurer. An officer, found in all Masonic bodies, whose duty it is to take charge of the funds and pay them out under proper regulations. He is simply the banker of the Lodge or Chapter, and has nothing to do with the collection of money, which should be made by the Secretary. He is an elective officer. The Treasurer's jewel is a key, as a symbol that he controls the chest of the Lodge. His position in the Lodge is on the right of the Worshipful Master, in front.

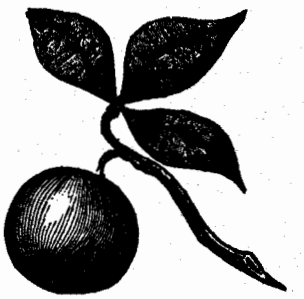
Treasurer, Grand. See *Grand Treasurer*.



Treasurer, Hermetic. (*Trésorier hermétique.*) A degree in the manuscript collection of Peuvret. This collection contains eight other degrees with a similar title, namely: Illustrious Treasurer, Treasurer of Paracelsus, Treasurer of Solomon, Treasurer of the Masonic Mysteries, Treasurer of the Number 7, Sublime Treasurer, Depositor of the Key of the Grand Work, and, lastly, one with the grandiloquent title of Grand and Sublime Treasurer, or Depositor of the Great Solomon, Faithful Guardian of Jehovah.

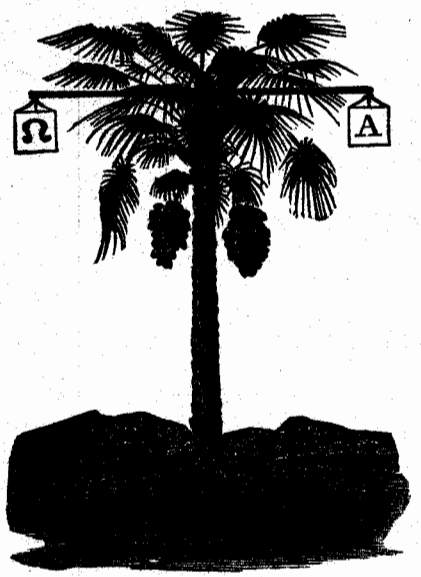
Tredic. The king highest in rank in the Scandinavian mysteries.

Tree Alphabet. There are alphabets used among the Persians and Arabs at the present day as secret ciphers, which it can scarcely be doubted were original, and ages ago adopted and recognized as the ordinary business mode of communication among men. Among these the Tree Alphabet is the most common. The Philosopher Dioscorides wrote several works on the subject of trees and herbs, and made prominent the secret characters of this alphabet, which became known by his name, and was adopted and used by others.



The characters were distinguishable by the number of branches on either side of the tree; thus, the TH is recognizable from the SH, notwithstanding each has three limbs on the left hand of the stem or trunk, by the one having six and the other seven branches on the right-hand side.

As an example, here are nine of the mystic characters and their relative values:



The characters in the lower line given above are the relative value, and known as the Alphabet of Hermes or Mercury.

Tree-Worship. The important position which this peculiar faith occupied among the peoples in the earliest ages of the world is apt to be overlooked in the multitude of succeeding beliefs, to which it gave many of its forms and ceremonies, and with which it became materially blended. In fact, Tree and Serpent Worship were combined almost at their inception. So prominent a position does Tree-Worship take in the opinion of Fergusson, in his absorbing work on *Tree and Serpent Worship*, that he designates the Tree as the first of Faiths; and adds that "long before the Theban gods existed, Tree and Serpent Faiths flourished. The Methidy tree was brought into the later religion, to shade with holy reverence the tomb of Osiris; the Sycamore was holy to Netpe, and the Persea to Athor, whilst the Tamarisk played an important part in all the rites and ceremonies of Osiris and Isis; and all who are orthodox will acknowledge that Abram seemed to consider

that he could not worship his Jove till he had planted his grove and digged a well (Gen. xxi. 33). His Oak or 'Terebinth,' or turpentine tree, on the plains of Mamre, was commonly worshiped till the fourth century A. C., and it is revered by Jews to the present hour." And again: "That long ere Buddha or his saints were represented by images and adored, long ere the caves and temples of that faith had sanctuaries for holy relics, *the first actual symbol-worship he can trace is that of the Bo tree*, which he describes as upon a *bas-relief* in a cave called the Jodea-Gopa (Katak, Bengal), prov-

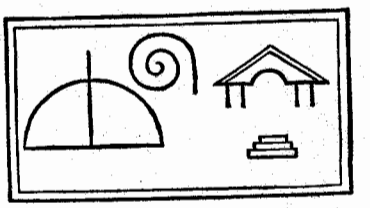
ing how early that worship was introduced, and how pre-eminent it was among the Buddhists of those days'"; and says J. G. R. Forlong, in his *Rivers of Life, or Faiths of Man, "before Vedic days;* and can be found in almost every cave and temple allied to the Phallic faith as certainly as can be found ever standing at the entrance of these 'Houses of God' the Phallic pillar or pillars. It is *the old story* whether we turn to Solomon's temple, 1000 B. C., or to

PALM-TREE WITH CROSS.

the Karli Buddhist temples, which gaze down upon us from Bombay to Poona, and which date from about the Christian era."

The Bael tree, as a representative of the triad and monad, was always offered at Lingam worship, and the god was commonly to be found under an umbrageous Bael.

All nations, Aryans in particular, considered tree-planting a sacred duty. The grand old trees became centers of life and of great traditions, and the character of the foliage had its symbolic meanings.



At the Jewish Feast of Tabernacles, at the autumnal harvest, Jews are ordered to hang boughs of trees, laden with fruit, round the borders of their booths, also boughs of barren trees. The worshipers go to the synagogue carrying in their right hand one palm-branch, three myrtles, and two willows, all tied together; and in the left hand a citron branch with fruit on it. These they make touch each other, and wave to the east, then south, then west, and then north: this is termed Hosana. On the seventh day of the Feast, all save the willow bough must be laid aside.

The Palm, as a tree, yields more to man than any other class of trees. Nineveh shows the Palm surrounded by winged deities holding the pine-cone—symbol of life, which there takes the place of the Crux Ansata. The Phœnix resting on the Palm signifies "Resurrection to eternal life." The four evangelists are depicted in "an evangelum," in the library of the British Museum, as all looking up to the Palm-tree. Christians, for a similar ideal, erected a cross-bar, and placed an Alpha and an Omega on it.

At Najran, in Yemen, Arabia, Sir William Ouseley describes the most perfect tree-worship as still existing close to the city. The tree is the Palm or Sacred date. The Palm has always borne a most important part in all the faiths of the world down to the present day. The Jews gave the Palm a distinguished place in architecture. The tree and its *lotus* top, says Kitto, took the place of the Egyptian column on Solomon's famous phalli, the *Jachin* and *Boaz*.

The two trees in Genesis were those of *Life* and *Knowledge*, and were probably drawn from the Egyptian and Zoroastrian stories. But no further reference is taken in the Bible of the "Tree of Knowledge" after Genesis, but to that of Life, or the "*Tree which gives Life*," as in the Apocalypse ii. 7. This is also the Eastern name and significance of the Lingam or Pillar; and when covered with carved inscriptions, the Toth or Pillar in Egypt became known as the "Tree of Knowledge."

Trestle-Board. The trestle-board is defined to be the board upon which the Master inscribes the designs by which the Craft are to be directed in their labors. The French and German Masons have confounded the *trestle-board* with the tracing-board; and Dr. Oliver (*Landm.*, i., 132) has not avoided the error. The two things are entirely different. The trestle is a framework for a table—in Scotch, *trest;* the *trestle-board* is the board placed for convenience of drawing on that frame. It contains nothing but a few diagrams, usually geometrical figures. The *tracing-board* is a picture formerly drawn on the floor of the Lodge, whence it was called a floor-cloth or carpet. It contains a delineation of the symbols of the degree to which it belongs. The *trestle-board* is to be found only in the Entered Apprentice's Degree. There is a

tracing-board in every degree, from the first to the highest. And, lastly, the *trestle-board* is a symbol; the *tracing-board* is a piece of furniture or picture containing the representation of many symbols.

It is probable that the trestle-board, from

its necessary use in Operative Masonry, was one of the earliest symbols introduced into the Speculative system. It is not, however, mentioned in the *Grand Mystery*, published in 1724. But Prichard, who wrote only six years afterward, describes it, under the corrupted name of *trasel-board*, as one of the immovable jewels of an Apprentice's Lodge. Browne, in 1880, following Preston, fell into the error of calling it a *tracing-board*, and gives from the Prestonian lecture what he terms "a beautiful degree of comparison," in which the Bible is compared to a tracing-board. But the Bible is not a collection of symbols, which a tracing-board is, but a trestle-board that contains the plan for the construction of a spiritual temple. Webb, however, when he arranged his system of lectures, took the proper view, and restored the true word, trestle-board.

Notwithstanding these changes in the name, trestle-board, trasel-board, tracing-board, and trestle-board again, the definition has continued from the earliest part of the last century to the present day the same. It has always been enumerated among the jewels of the Lodge, although the English system says that it is immovable and the American movable; and it has always been defined as "a board for the master workman to draw his designs upon."

In Operative Masonry, the trestle-board is of vast importance. It was on such an implement that the genius of the ancient masters worked out those problems of architecture that have reflected an unfading luster on their skill. The trestle-board was the cradle that nursed the infancy of such mighty monuments as the cathedrals of Strasburg and Cologne; and as they advanced in stature, the trestle-board became the guardian spirit that directed their growth. Often have those old builders pondered by the midnight lamp upon their trestle-board, working out its designs with consummate taste and knowledge—here springing an arch, and turning an angle there, until the embryo edifice stood forth in all the wisdom, strength, and beauty of the Master's art.

What, then, is its true symbolism in Speculative Masonry?

To construct his earthly temple, the Operative Mason followed the architectural designs laid down on the *trestle-board*, or book of plans of the architect. By these he hewed and squared his materials; by these he raised his walls; by these he constructed his arches; and by these strength and durability, combined with grace and beauty, were bestowed upon the edifice which he was constructing.

In the Masonic ritual, the Speculative Mason is reminded that, as the Operative artist erects his temporal building in accordance with the rules and designs laid down on the trestle-board of the master workman, so should he erect that spiritual building, of which the material is a type, in obedience to the rules and designs, the precepts and commands, laid down by the Great Architect of the Universe in those great books of nature and revelation which constitute the spiritual trestle-board of every Freemason.

The trestle-board is then the symbol of the natural and moral law. Like every other symbol of the Order, it is universal and tolerant in its application; and while, as Christian Masons, we cling with unfaltering integrity to the explanation which makes the Scriptures of both dispensations our trestle-board, we permit our Jewish and Mohammedan brethren to content themselves with the books of the Old Testament or Koran. Masonry does not interfere with the peculiar form or development of any one's religious faith. All that it asks is that the interpretation of the symbol shall be according to what each one supposes to be the revealed will of his Creator. But so rigidly exacting is it that the symbol shall be preserved and, in some rational way, interpreted, that it peremptorily excludes the atheist from its communion, because, believing in no Supreme Being—no Divine Architect—he must necessarily be without a spiritual trestle-board on which the designs of that Being may be inscribed for his direction.

Triad. In all the ancient mythologies there were triads, which consisted of a mysterious union of three deities. Each triad was generally explained as consisting of a creator, a preserver, and a destroyer. The principal heathen triads were as follows: the Egyptian, Osiris, Isis, and Horus; the Orphic, Phanes, Uranus, and Kronos; the Zoroastric, Ormuzd, Mithras, and Ahriman; the Indian, Brahma, Vishnu, and Siva; the Cabiric, Axercos, Axiokersa, and Axiokersos; the Phœnician, Ashtaroth, Milcom, and Chemosh; the Tyrian, Belus, Venus, and Thammuz; the Grecian, Zeus, Poseidon, and Hades; the Roman, Jupiter, Neptune, and Pluto; the Eleusinian, Iacchus, Persephone, and Demeter; the Platonic, Tagathon, Nous, and Psyche; the Celtic, Hu, Ceridwen, and Creirwy; the Teutonic, Fenris, Midgard, and Hela; the Gothic, Woden, Friga, and Thor; and the Scandinavians, Odin, Vile, and Ve. Even the Mexicans had their triads, which were Vitzliputzli, Kaloc, and Tescalipuca.

This system of triads has, indeed, been so predominant in all the old religions, as to be invested with a mystical idea; and hence it has become the type in Masonry of the triad of three governing officers, who are to be found in almost every degree. The Master and the two Wardens in the Lodge give rise to the Priest, the King, and the Scribe in the Royal Arch; to the Commander, the Generalissimo, and the Captain-General in Templarism; and in most of the high degrees to a triad who preside under various names.

We must, perhaps, look for the origin of the triads in mythology, as we certainly must in Masonry, to the three positions and functions of the sun. The rising sun or creator of light, the meridian sun or its preserver, and the setting sun or its destroyer.

Triad Society of China. The San Hop Hwai, or Triad Society, is a secret political association in China, which has been mistaken by some writers for a species of Chinese Freemasonry; but it has in reality no connection whatsoever with the Masonic Order. In its principles, which are far from innocent, it is entirely antagonistic to Freemasonry. The Deputy Provincial Grand Master of British Masonry in China made a statement to this effect in 1855, in *Notes and Queries*. (1st ser., vol. xii., p. 233.)

Trials, Masonic. As the only object of a trial should be to seek the truth and fairly to administer justice, in a Masonic trial, especially, no recourse should ever be had to legal technicalities, whose use in ordinary courts appears simply to be to afford a means of escape for the guilty.

Masonic trials are, therefore, to be conducted in the simplest and least technical method, that will preserve at once the rights of the Order and of the accused, and which will enable the Lodge to obtain a thorough knowledge of all the facts in the case. The rules to be observed in conducting such trials have been already laid down by me in my *Text Book of Jurisprudence* (pp. 558–564), and I shall refer to them in the present article. They are as follows:

1. The preliminary step in every trial is the accusation or charge. The charge should always be made in writing, signed by the accuser, delivered to the Secretary, and read by that officer at the next regular communication of the Lodge. The accused should then be furnished with an attested copy of the charge, and be at the same time informed of the time and place appointed by the Lodge for the trial.

Any Master Mason may be the accuser of another, but a profane cannot be permitted to prefer charges against a Mason. Yet, if circumstances are known to a profane upon which charges ought to be predicated, a Master Mason may avail himself of that information, and out of it frame an accusation, to be presented to the Lodge. And such accusation will be received and investigated, although remotely derived from one who is not a member of the Order.

It is not necessary that the accuser should be a member of the same Lodge. It is sufficient if he is an affiliated Mason. I say an affiliated Mason, for it is generally held, and I believe correctly, that an unaffiliated Mason is no more competent to prefer charges than a profane.

2. If the accused is living beyond the geographical jurisdiction of the Lodge, the charges should be communicated to him by means of a letter through the post-office, and a reasonable time should be allowed for his answer, before the Lodge proceeds to trial. But if his residence be unknown, or if it be impossible to hold communication with him, the Lodge may then proceed to trial—care being had that no undue advantage be taken of his absence, and that the investigation be as full and impartial as the nature of the circumstances will permit.

3. The trial must commence at a regular communication, for reasons which have already been stated; but having commenced, it may be continued at special communications, called for that purpose; for, if it was allowed only to be continued at regular meetings, which take place but once a month, the long duration of time occupied would materially tend to defeat the ends of justice.

4. The Lodge must be opened in the highest degree to which the accuser has attained, and the examinations of all witnesses must take place in the presence of the accused and the accuser, if they desire it. It is competent for the accused to employ counsel for the better protection of his interests, provided such counsel is a Master Mason. But if the counsel be a member of the Lodge, he forfeits, by his professional advocacy of the accused, the right to vote at the final decision of the question.

5. The final decision of the charge, and the rendering of the verdict, whatever be the rank of the accused, must always be made in a Lodge opened on the Third Degree; and at the time of such decision, both the accuser and the accused, as well as his counsel, if he have any, should withdraw from the Lodge.

6. It is a general and an excellent rule, that no visitors shall be permitted to be present during a trial.

7. The testimony of Master Masons is usually taken on their honor, as such. That of others should be by affidavit, or in such other manner as both the accuser and accused may agree upon.

8. The testimony of profanes, or of those who are of a lower degree than the accused, is to be taken by a committee and reported to the Lodge, or, if convenient, by the whole Lodge, when closed and sitting as a committee. But both the accused and the accuser have a right to be present on such occasions.

9. When the trial is concluded, the accuser and the accused must retire, and the Master will then put the question of guilty, or not guilty, to the Lodge.

Not less than two-thirds of the votes should be required to declare the accused guilty. A bare majority is hardly sufficient to divest a brother of his good character, and render him subject to what may perhaps be an ignominous punishment. But on this subject the authorities differ.

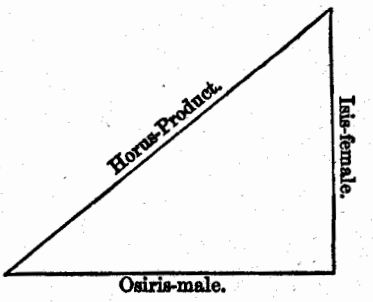
10. If the verdict is guilty, the Master must then put the question as to the nature

and extent of the punishment to be inflicted, beginning with expulsion and proceeding, if necessary, to indefinite suspension and public and private reprimand. To inflict expulsion or suspension, a vote of two-thirds of those present is required, but for a mere reprimand, a majority will be sufficient. The votes on the nature of the punishment should be *viva voce*, or, rather, according to Masonic usage, by a show of hands.

Trials in a Grand Lodge are to be conducted on the same general principles; but here, in consequence of the largeness of the body, and the inconvenience which would result from holding the examinations in open Lodge, and in the presence of all the members, it is more usual to appoint a committee, before whom the case is tried, and upon whose full report of the testimony the Grand Lodge bases its action. And the forms of trial in such committees must conform, in all respects, to the general usage already detailed.

Triangle. There is no symbol more important in its signification, more various in its application, or more generally diffused throughout the whole system of Freemasonry, than the triangle. An examination of it, therefore, cannot fail to be interesting to the Masonic student.

The *equilateral triangle* appears to have been adopted by nearly all the nations of antiquity as a symbol of the Deity, in some of his forms or emanations, and hence, probably, the prevailing influence of this symbol was carried into the Jewish system, where the yod within the triangle was made to represent the Tetragrammaton, or sacred name of God.



The equilateral triangle, says Bro. D. W. Nash (*Freem. Mag.*, iv., 294), "viewed in the light of the doctrines of those who gave it currency as a divine symbol, represents the Great First Cause, the creator and container of all things, as one and indivisible, manifesting himself in an infinity of forms and attributes in this visible universe."

Among the Egyptians, the darkness through which the candidate for initiation was made to pass was symbolized by the trowel, an important Masonic implement, which in their system of hieroglyphics has the form of a triangle. The equilateral triangle they considered as the most perfect of figures, and a representative of the great principle of animated existence, each of its sides referring to one of the three departments of creation, the animal, vegetable, and mineral.

The equilateral triangle is to be found scattered throughout the Masonic system. It forms in the Royal Arch the figure within which the jewels of the officers are suspended. It is in the ineffable degrees the sacred delta, everywhere presenting itself as the symbol of the Grand Architect of the Universe. In Ancient Craft Masonry, it is constantly exhibited as the element of important ceremonies. The seats of the principal officers are arranged in a triangular form, the three lesser lights have the same situation, and the square and compass form, by their union on the greater light, two triangles meeting at their bases. In short, the equilateral triangle may be considered as one of the most constant forms of Masonic symbolism.

The *right-angled triangle* is another form of this figure which is deserving of attention. Among the Egyptians, it was the symbol of universal nature; the base representing Osiris, or the male principle; the perpendicular, Isis, or the female principle; and the hypotenuse, Horus, their son, or the product of the male and female principle.

This symbol was received by Pythagoras from the Egyptians during his long sojourn in that country, and with it he also learned the peculiar property it possessed, namely, that the sum of the squares of the two shorter sides is equal to the square of the longest side—symbolically expressed by the formula, that the product of Osiris and Isis is Horus. This figure has been adopted in the Third Degree of Masonry, and will be there recognized as the forty-seventh problem of Euclid.

Triangle and Square. As the Delta was the initial letter of Deity with the ancients, so its synonym is among modern nations. It is a type of the Eternal, the All-Powerful, the Self-Existent.

1.

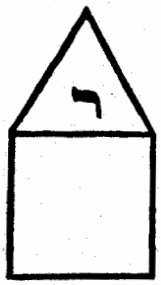
The material world is typified by the "square" as passive matter, in opposition to force symbolized by the triangle.

The Square is also an emblem of humanity, as the Delta or Triangle typifies Deity.

The Delta, Triangle, and Compasses are essentially the same. The raising one point, and then another, signifies that the Divine or higher portion of our nature should increase in power, and control

the baser tendencies. This is the real, the practical "journey toward the East."

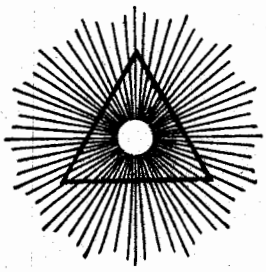
2.



The interlacing triangles or deltas symbolize the union of the two principles or forces, the active and passive, male and female, pervading the universe. (1.)

The two triangles, one white and the other black, interlacing, typify the mingling of the two apparent powers in nature, darkness and light, error and truth, ignorance and wisdom, evil and good, throughout human life. (2.)

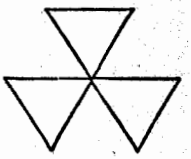
The triangle and square together form the pyramid (3), as seen in the Entered Apprentice's apron. In this combination the pyramid is the metaphor for unity of matter and force, as well as the oneness of man and God. The numbers 3, 5, 7, 9, have their places in the parts and points of the square and triangle when in pyramidal form, and imply Perfection. (See *Pointed Cubical Stone.*)



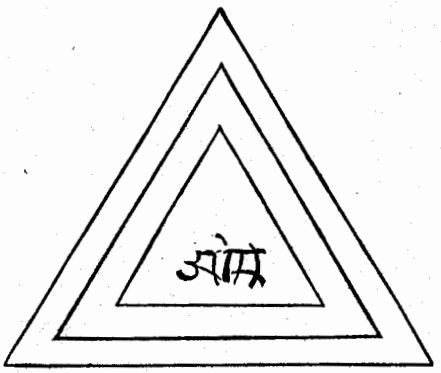
3.

Triangle, Double. See *Seal of Solomon* and *Shield of David.*

Triangle of Pythagoras. See *Pentalpha.*



Triangle, Radiated. A triangle placed within and surrounded by a circle of rays. This circle is called, in Christian art, "a glory." When this glory is distinct from the triangle, and surrounds it in the form of a circle, it is then an emblem of God's



eternal glory. This is the usual form in religious uses. But when, as is most usual in the Masonic symbol, the rays emanate from the center of the triangle, and, as it were, enshroud it in their brilliancy, it is symbolic of the Divine Light. The perverted ideas of the Pagans referred these rays of light to their sun-god and their Sabian worship.

But the true Masonic idea of this glory is, that it symbolizes that Eternal Light of Wisdom which surrounds the Supreme Architect as a sea of glory, and from Him as a common center emanates to the universe of His creation.

Triangle, Triple. The *pentalpha*, or triangle of Pythagoras, is usually called also the triple triangle, because three triangles are formed by the intersection of its sides. But there is another variety of the triple triangle which is more properly entitled to the appellation, and which is made in the annexed form.

It will be familiar to the Knights Templar as the form of the jewel worn by the Prelate of his Order. Like every modification of the triangle, it is a symbol of the Deity; but as the degree of Knights Templar appertains exclusively to Christian

Masonry, the triple triangle there alludes to the mystery of the Trinity. In the Scottish Rite Degree of Knight of the East the symbol is also said to refer to the triple essence of Deity; but the symbolism is made still more mystical by supposing that it represents the sacred number 81, each side of the three triangles being equivalent to 9, which again is the square of 3, the most sacred number in Freemasonry. In the Twentieth Degree of the Ancient and Accepted Scottish Rite, or that of "Grand Master of all Symbolic Lodges," it is said that the number 81 refers to the triple covenant of God, symbolized by a triple triangle said to have been seen by Solomon when he consecrated the Temple. Indeed, throughout the ineffable and the philosophic degrees, the allusions to the triple triangle are much more frequent than they are in Ancient Craft Masonry.

The Indian trimourti, or triple triangle of the Hindus, is of a different form, consisting of three concentric triangles. In the center is the sacred triliteral name, AUM. The interior triangle symbolizes Brahma, Vishnu, and Siva; the middle one, Creation.

Preservation, and Destruction; and the exterior one, Earth, Water, and Air.

Tribe of Judah, Lion of the. The connection of Solomon, as the chief of the tribe of Judah, with the lion, which was the achievement of the tribe, has caused this expression to be referred, in the Third Degree, to Him who brought life and immortality to light. The old Christian interpretation of the Masonic symbols here prevails; and in Ancient Craft Masonry all allusions to the lion, as the *lion's paw*, the *lion's grip*, etc., refer to the doctrine of the resurrection taught by Him who is known as "the lion of the tribe of Judah." The expression is borrowed from the Apocalypse (v. 5): "Behold, the Lion of the tribe of Judah, the Root of David, hath prevailed to open the book, and to loose the seven seals thereof." The lion was also a Medieval symbol of the resurrection, the idea being founded on a legend. The poets of that age were fond of referring to this legendary symbol in connection with the Scriptural idea of the "tribe of Judah." Thus Adam de St. Victor, in his poem *De Resurrectione Domini*, says:

"Sic de Juda Leo fortis,
Fractis portis diræ mortis
Die surgit tertia,
Rugiente voce Patris."

i. e.,

Thus the strong lion of Judah,
The gates of cruel death being broken,
Arose on the third day
At the loud-sounding voice of the Father.

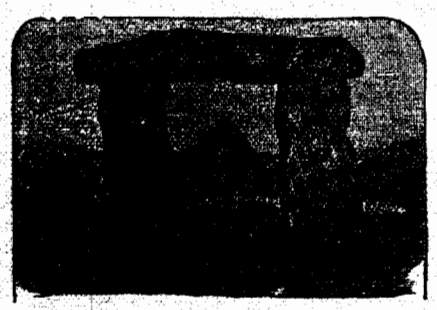
The lion was the symbol of strength and sovereignty, in the human-headed figures of the Nimrod gateway, and in other Babylonish remains. In Egypt, it was worshiped at the city of Leontopolis as typical of Dom, the Egyptian Hercules. Plutarch says that the Egyptians ornamented their temples with gaping lions' mouths, because the Nile began to rise when the sun was in the constellation Leo. Among the Talmudists there was a tradition of the lion, which has been introduced into the higher degrees of Masonry.

But in the symbolism of Ancient Craft Masonry, where the lion is introduced, as in the Third Degree, in connection with the "lion of the tribe of Judah," he becomes simply a symbol of the resurrection; thus restoring the symbology of the Medieval ages, which was founded on a legend that the lion's whelp was born dead, and only brought to life by the roaring of its sire. Philip de Thaun, in his *Bestiary*, written in the twelfth century, gives the legend, which has thus been translated by Mr. Wright from the original old Norman French:

"Know that the lioness, if she bring forth a dead cub, she holds her cub and the Lon arrives; he goes about and cries, till it revives on the third day . . . . Know that the lioness signifies St. Mary, and the lion Christ, who gave himself to death for the people; three days he lay in the earth to gain our souls. . . . . By the cry of the lion they understand the power of God, by which Christ was restored to life and robbed hell."

The phrase, "lion of the tribe of Judah," therefore, when used in the Masonic ritual, referred in its original interpretation to Christ, Him who "brought life and immortality to light."

Tribes of Israel. All the twelve tribes of Israel were engaged in the construction of the first Temple. But long before its destruction, ten of them revolted, and formed the nation of Israel; while the remaining two, the tribes of Judah and Benjamin, retained possession of the Temple and of Jerusalem under the name of the kingdom of Judah. To these two tribes alone, after the return from the captivity, was entrusted the building of the second Temple. Hence in the high degrees, which, of course, are connected for the most part with the Temple of Zerubbabel, or with events that occurred subsequent to the destruction of that of Solomon, the tribes of Judah and Benjamin only are referred to. But in the primary degrees, which are based on the first Temple, the Masonic references always are to the twelve tribes. Hence in the old lectures the twelve original points are explained by a reference to the twelve tribes. (See *Twelve Original Points of Masonry*.)



Tribunal. The modern statutes of the Supreme Council of the Ancient and Accepted Scottish Rite for the Southern Jurisdiction of the United States direct trials of Masonic offenses, committed by any brethren of the Rite above the Eighteenth Degree, to be held in a court called a Tribunal of the Thirty-first Degree, to be composed of not less nor more than nine members. An appeal lies from such a Tribunal of Inspectors Inquisitors to the Grand Consistory or the Supreme Council.

Tribunal, Supreme. 1. The Seventy-first Degree of the Rite of Mizraim. 2. The meeting of Inquisitors Inspectors of the Thirty-first Degree of the Ancient and Accepted Scottish Rite according to the modern ritual of the Mother Council.

Trifels. The name of the ruined castle, four miles from Madenburg, on a mountain slope, where Sir Richard Cœur de Lion was a prisoner for more than a year, by decree of the Emperor Henry VI., and until his liberation by the faithful Blondel. Naught remains but thirty feet of the tower and some fragments of wall. It is recorded that there may be seen engraved deep in the window-stone of the tower this mark: the passion cross standing upon the square with an apex upward, and having upon it an inverted TAU of proportionate size at an inclination of about forty-nine degrees.

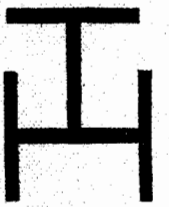
Triliteral Name. The sacred name of God among the Hindus is so called because it consists of the three letters, A U M. (See *Aum*.)

Trilithon. Three stones, two of which are placed parallel on their ends, and crossed by the third at the top.

THE TRILITHON AT ST. MICHAEL'S MOUNT, LAND'S END.

Trinidad. Masonry was introduced into the island of Trinidad by the establishment of a Lodge called "Les Frères Unis," under a Charter from the Grand Lodge of Pennsylvania, in 1797. A Charter had been granted the year before by the Grand Orient of France, but never acted on, in consequence of the suspension of that body by the French Revolution. In 1804, the Grand Lodge of Pennsylvania, in its capitular capacity, granted a Charter for a Royal Arch Chapter, which continued to meet until 1813, when it obtained a new Warrant of Constitution from the Supreme Chapter of Scotland. In 1814, Templar Masonry was established by a Deuchar Warrant from the Grand Conclave of Scotland. In 1819, a Council of Royal and Select Masters was established. Trinidad has at present a Provincial Grand Lodge under the Grand Lodge of Scotland, and there are also three Lodges under the Grand Lodge of England.

Trinitarians, Order of. An androgynous order founded in 1198, in the time of Innocent III., for the purpose of ransoming Christians from the Moors.



Trinity, Religious Fraternity of the Holy. Instituted at Rome by St. Philip Neri in 1548.

Trinosophs. The Lodge of the Trinosophs was instituted at Paris by the celebrated Ragon, October 15, 1816, and installed by the Grand Orient, January 11, 1817. The word *Trinosophs* is derived from the Greek, and signifies *students of three sciences*, in allusion to the three primitive degrees, which were the especial object of study by the members; although they adopted both the French and Scottish Rites, to whose high degrees, however, they gave their own philosophical interpretation. It was before this Lodge that Ragon delivered his *Interpretative and Philosophic Course of Initiations*. The Lodge was composed of some of the most learned Masons of France, and played an important part in Masonic literature. No Lodge in France has obtained so much celebrity as did the Trinosophs. It was connected with a Chapter and Council in which the high degrees were conferred, but the Lodge confined itself to the three symbolic degrees, which it sought to preserve in the utmost purity.

Tripitaka. Tri, three, and Pitaka, basket. The canonical book of the Buddhists, written two hundred years after the third Œcumenical Council, or about 60 B. C. The former Asiatic Indra doctrines having become intolerable, Sakya, a reformer in religion, rejected the god Brahma, and the holy books of the Veda, the sacrifices and other rites, and said: "My law is grace for all." These sacred writings of the Hindus were called the Three Baskets: the basket of Laws, the basket of Discipline, and the basket of Doctrines. The first basket is called "Dharma," and relates to the law for man; the second, "Vinaya," and relates to the discipline of the priests; and the third, "Abhidharma," and pertains to the gods. It is estimated that 350,000,000 people believe in these writings as sacred and canonical.

Triple Alliance. An expression in the high degrees, which, having been translated from the French rituals, should have more properly been the triple covenant. It is represented by the triple triangle, and refers to the covenant of God with his people, that of King Solomon with Hiram of Tyre, and that which binds the fraternity of Masons.

Triple Tau. The tau cross, or cross of St. Anthony, is a cross in the form of a Greek T. The triple tau is a figure formed by three of these crosses meeting in a point, and therefore resembling a letter T resting on the traverse bar of an H. This emblem, placed in the center of a triangle and circle—both emblems of the Deity—constitutes the jewel of the Royal Arch as practised in England, where it is so highly esteemed as to be called the "emblem of all emblems," and "the grand emblem of Royal Arch Masonry." It was adopted in the same form as the Royal Arch badge, by the General Grand Chapter of the United States in 1859; although it had previously been very generally recognized by American Masons. It is also found in the capitular Masonry of Scotland. (See *Royal Arch Badge.*)

The original signification of this emblem has been variously explained. Some suppose it to include the initials of the Temple of Jerusalem, T. H., *Templum Hierosolymæ*; others, that it is a symbol of the mystical union of the Father and Son, H signifying Jehovah, and T, or the cross, the Son. A writer in *Moore's Magazine* ingeniously supposes it to be a representation of three T squares, and that it alludes to the three jewels of the three ancient Grand Masters.

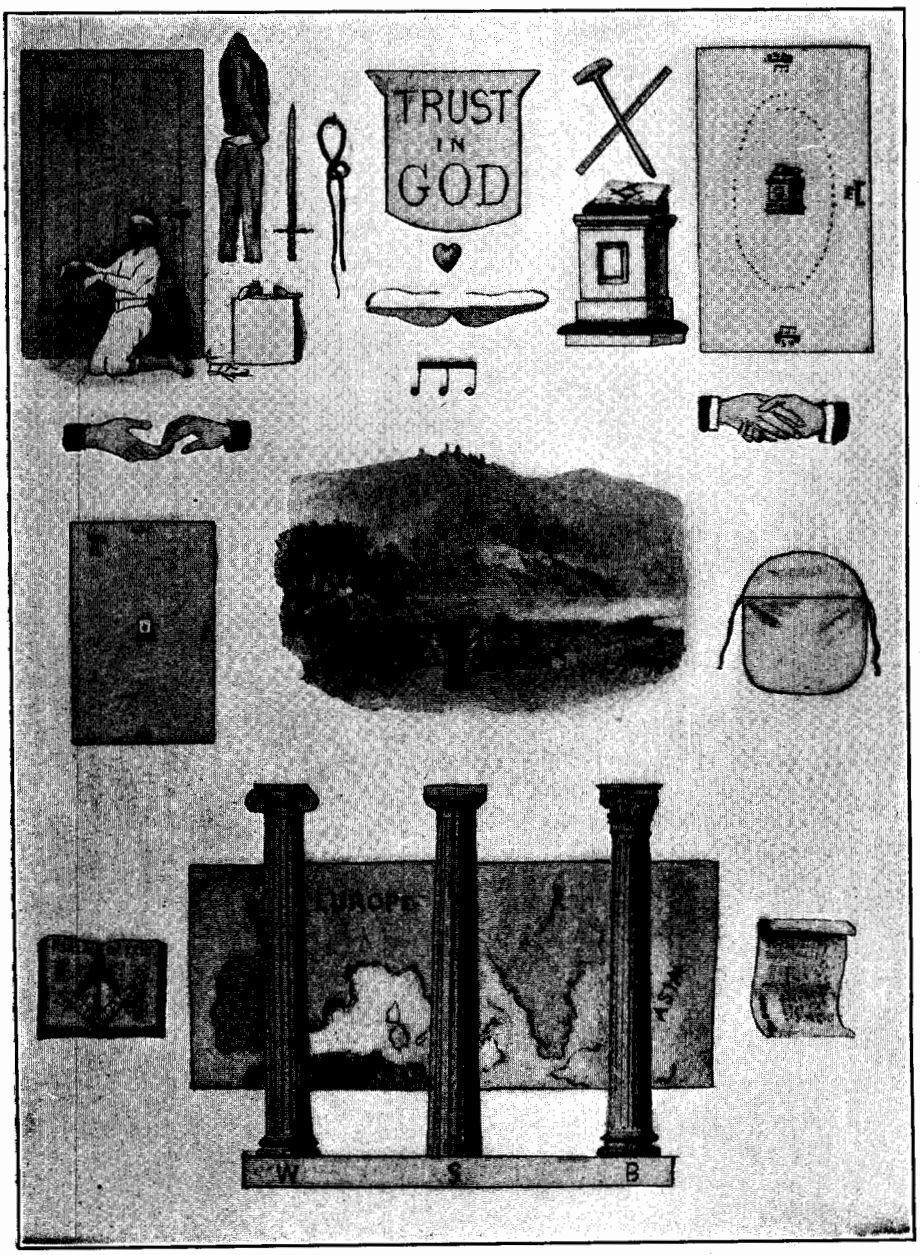
It has also been said that it is the monogram of Hiram of Tyre; and others assert that it is only a modification of the Hebrew letter *shin*, ש, which was one of the Jewish abbreviations of the sacred name. Oliver thinks, from its connection with the circle and triangle in the Royal Arch jewel, that it was intended to typify the sacred name as the author of eternal life. The English Royal Arch lectures say that "by its intersection it forms a given number of angles that may be taken in five several combinations; and, reduced, their amount in right angles will be found equal to the five Platonic bodies which represent the four elements and the sphere of the Universe." Amid so many speculations, I need not hesitate to offer one of my own. The Prophet Ezekiel speaks of the *tau* or tau cross as the mark distinguishing those who were to be saved, on account of their sorrow for their sins, from those who, as idolaters, were to be slain. It was a mark or sign of favorable distinction; and with this allusion we may, therefore, suppose the triple tau to be used in the Royal Arch Degree as a mark designating and separating those who know and worship the true name of God from those who are ignorant of that august mystery.

Trivium. See *Quadrivium*.

Trowel. An implement of Operative Masonry, which has been adopted by Speculative Masons as the peculiar working-tool of the Master's Degree. By this implement, and its use in Operative Masonry to spread the cement which binds all the parts of the building into one common mass, we are taught to spread the cement of affection and kindness, which unites all the members of the Masonic family, wheresoever dispersed over the globe, into one companionship of Brotherly Love.

This implement is considered the appropriate working-tool of a Master Mason, because, in Operative Masonry, while the Apprentice is engaged in preparing the rude materials, which require only the gage and gavel to give them their proper shape, the Fellow-Craft places them in their proper position by means of the plumb, level, and square; but the Master Mason alone, having examined their correctness and proved them true and trusty, secures them permanently in their place by spreading, with the trowel, the cement that irrevocably binds them together.

The trowel has also been adopted as the jewel of the Select Master. But its uses in this degree are not symbolical. They are simply connected with the historical legend of the degree.



Trowel and Sword. When Nehemiah received from Artaxerxes Longimanus the appointment of Governor of Judea, and was permitted to rebuild the walls of Jerusalem, and to restore the city to its former fortified condition, he met with great opposition from the Persian satraps, who were envious of his favor with the king, and from the heathen inhabitants of Samaria, who were unwilling to see the city again assume its pristine importance. The former undertook to injure him with Artaxerxes by false reports of his seditious designs to restore the independent kingdom of Judea. The latter sought to obstruct the workmen of Nehemiah in their labors, and openly attacked them. Nehemiah took the most active measures to refute the insidious accusations of the first, and to repel the more open violence of the latter. Josephus says (*Antiq.*, B. XI., ch. vi., § 8) that he gave orders that the builders should keep their ranks, and have their armor on while they were building; and, accordingly, the mason had his sword on as well as he that brought the materials for building.

Zerubbabel had met with similar opposition from the Samaritans while rebuilding the Temple; and although the events connected with Nehemiah's restoration of the walls occurred long after the completion of the second Temple, yet the Masons have in the high degrees referred them to the time of Zerubbabel. Hence in the Fifteenth Degree of the Scottish Rite, or the Knight of the East, which refers to the building of the Temple of Zerubbabel, we find this combination of the trowel and the sword adopted as a symbol. The old ritual of that degree says that Zerubbabel, being informed of the hostile intentions of the false brethren from Samaria, "ordered that all the workmen should be armed with the trowel in one hand and the sword in the other, that while they worked with the one they might be enabled to defend themselves with the other, and ever repulse the enemy if they should dare to present themselves."

In reference to this idea, but not with chronological accuracy, the trowel and sword have been placed crosswise as symbols on the tracing-board of the English Royal Arch.

Oliver correctly interprets the symbol of the trowel and sword as signifying that, "next to obedience to lawful authority, a manly and determined resistance to lawless violence is an essential part of social duty."

Trowel, Society of the. Vasari, in his *Lives of the Painters and Sculptors* (Life of G. F. Rustici), says that about the year 1512 there was established at Florence an association which counted among its members some of the most distinguished and learned inhabitants of the city. It was the "Società della Cucchiara," or the *Society of the Trowel*. Vasari adds that its symbols were the trowel, the hammer, the square, and the level, and had for its patron St. Andrew, which makes Reghellini think, rather illogically, that it had some relation to the Scottish Rite. Lenning, too, says that this society was the first appearance of Freemasonry in Florence. It is to be regretted that such misstatements of Masonic history should be encouraged by

TRUST
IN
GOD

S
B

writers of learning and distinction. The perusal of the account of the formation of this society, as given by Vasari, shows that it had not the slightest connection with Freemasonry. It was simply a festive association, or dinner-club of Florentine artists; and it derived its title from the accidental circumstance that certain painters and sculptors, dining together in a garden, found not far from their table a mass of mortar, in which a trowel was sticking. Some rough jokes passed thereupon, in the casting of the mortar on each other, and the calling for the trowel to scrape it off. Whereupon they resolved to form an association to dine together annually, and, in memorial of the ludicrous event that had led to their establishment, they called themselves the Society of the Trowel.

True Light. *Sit lux et lux fuit.* The translation from the Hebrew Bible of this passage, so often quoted in Masonry, is: "And the Lord said, 'Let there be light, and it was light.' And the Lord took care of the light, that it was useful; and He divided the light from the darkness."

True Masons. See *Academy of True Masons.*

Truro Cathedral. A Protestant edifice erected at a seaport of Cornwall, England, standing at the junction of two rivers, the Allen and the Kenwyn. On the 20th of May, 1880, the Grand Master of Masons (Prince of Wales) laid two corner-stones of the cathedral with great pageantry, pomp, and ceremony. This was the first time a Grand Master of Masons in England was known to lay the corner-stone of an ecclesiastical structure; this was, also, the first occasion on which the then Grand Master had performed such a service, in Masonic clothing, surrounded with his staff and officers, in rich robes and in the costume of Masonry.

Trust in God. Every candidate on his initiation is required to declare that his trust is in God. And so he who denies the existence of a Supreme Being is debarred the privilege of initiation, for atheism is a disqualification for Masonry. This pious principle has distinguished the Fraternity from the earliest period; and it is a happy coincidence, that the company of Operative Freemasons instituted in 1477 should have adopted, as their motto, the truly Masonic sentiment, "The Lord is all our Trust."

Truth. The real object of Freemasonry, in a philosophical and religious sense, is the search for truth. This truth is, therefore, symbolized by the WORD. From the first entrance of the Apprentice into the Lodge, until his reception of the highest degree, this search is continued. It is not always found and a substitute must sometimes be provided. Yet whatever be the labors he may perform, whatever the ceremonies through which he may pass, whatever the symbols in which he may be instructed, whatever the reward he may obtain, the true end of all is the attainment of truth. This idea of truth is not the same as that expressed in the lecture of the First Degree, where Brotherly Love, Relief, and Truth are there said to be the "three great tenets of a Mason's profession." In that connection, truth, which is called a "divine attribute, the foundation of every virtue," is synonymous with sincerity, honesty of expression, and plain dealing. The higher idea of truth which pervades the whole Masonic system, and which is symbolized by the WORD, is that which is properly expressed to a knowledge of God.

There was an Egyptian goddess named תם *Thm*, or תמה *Thme*, *integritas*, Justice and Truth. This one of the three great Masonic principles is represented among the Egyptians by an ostrich feather; and the judicial officer was also thus represented, "because that bird, unlike others, has all its feathers equal." Horapollo. The Hebrew word יען, *ion*, signifies an ostrich, as also a council; and the word רננה, *Rnne*, is interpreted, poetically, an ostrich, and also *a song of joy*, or *of praise;* hence, "the happy souls thus ornamented, under the inspection of the lords of the *heart's joy*, gathered fruits from celestial trees." In the judgment in Amenti, the soul advances toward the goddess Thme, who wears on her head the ostrich feather. In the scale, Anubis and Horus weigh the actions of the deceased. On one side is the ostrich feather, and on the other the vase containing the heart. Should the weight of the heart be greater than the feather, the soul is entitled to be received into the celestial courts. The forty-two judges, with heads ornamented with ostrich feathers, sit aloft to pronounce judgment. (See *Book of the Dead.*)

Tryonists. Those Pythagoreans who abstained from animal food.

Tsaphiel. צפיאל. Mirans Deus, the angel governing the Moon, in accordance with the Kabbalistical system.

Tschoudy, Louis Theodore. Michaud spells the name *Tschudi*, but Lenning, Thory, Ragon, Oliver, and all other Masonic writers, give the name as Tschoudy, which form, therefore, I adopt as the most usual, if not the most correct, spelling.

The Baron de Tschoudy was born at Metz, in 1720. He was descended from a family originally of the Swiss canton of Glaris, but which had been established in France since the commencement of the sixteenth century. He was a counselor of State and member of the Parliament of Metz; but the most important events of his life are those which connect him with the Masonic institution, of which he was a zealous and learned investigator. He was one of the most active apostles of the school of Ramsay, and adopted his theory of the Templar origin of Masonry. Having ob-

tained permission from the king to travel, he went to Italy, in 1752, under the assumed name of the Chevalier de Lussy. There he excited the anger of the papal court by the publication at The Hague, in the same year, of a book entitled *Etrenne au Pape, ou les Francs-Maçons Vengés;* i. e., "A New Year's Gift for the Pope, or the Free Masons Avenged." This was a caustic commentary on the bull of Benedict XIV. excommunicating the Freemasons. It was followed, in the same year, by another work entitled, *Le Vatican Vengé;* i. e., "The Vatican Avenged"; an ironical apology, intended as a sequence to the former book. These two works subjected him to such persecution by the Church that he was soon compelled to seek safety in flight.

He next repaired to Russia, where his means of living became so much impaired that, Michaud says, he was compelled to enter the company of comedians of the Empress Elizabeth. From this condition he was relieved by Count Ivan Schouwalon, who made him his private secretary. He was also appointed the secretary of the Academy of Moscow, and governor of the pages at the court. But this advancement of his fortunes, and the fact of his being a Frenchman, created for him many enemies, and he was compelled at length to leave Russia and return to France. There, however, the persecutions of his enemies pursued him, and on his arrival at Paris he was sent to the Bastile. But the intercession of his mother with the Empress Elizabeth and with the Grand Duke Peter was successful, and he was speedily restored to liberty. He then retired to Metz, and for the rest of his life devoted himself to the task of Masonic reform and the fabrication of new systems.

In 1762, the Council of Knights of the East was established at Paris. Ragon says (*Orthod. Maçon.*, p. 137) that "its ritual was corrected by the Baron de Tschoudy, the author of the *Blazing Star*." But this is an error. Tschoudy was then at Metz, and his work and system of the *Blazing Star* did not appear until four years afterward. It is at a later date that Tschoudy became connected with the Council.

In 1766 he published, in connection with Bardon-Duhamel, his most important work, entitled *L'Etoile Flamboyante, ou la Societé des Francs-Maçons considerée sous tous les Aspects;* i. e., "The Blazing Star, or the Society of Freemasons considered under Every Point of View."

In the same year he repaired to Paris, with the declared object of extending his Masonic system. He then attached himself to the Council of Knights of the East, which, under the guidance of the tailor Pirlet, had seceded from the Council of Emperors of the East and West. Tschoudy availed himself of the ignorance and of the boldness of Pirlet to put his plan of reform into execution by the creation of new degrees.

In Tschoudy's system, however, as developed in the *L'Etoile Flamboyante*, he does not show himself to be the advocate of the high degrees, which, he says, are "an occasion of expense to their dupes, and an abundant and lucrative resource for those who make a profitable traffic of their pretended instructions." He recognizes the three Symbolic degrees because their gradations are necessary in the Lodge, which he viewed as a school; and to these he adds a superior class, which may be called the architects, or by any other name, provided we attach to it the proper meaning. All the high degrees he calls "Masonic reveries," excepting two, which he regards as containing the secret, the object, and the essence of Masonry, namely, the Scottish Knight of St. Andrew and the Knight of Palestine. The former of these degrees was composed by Tschoudy, and its ritual, which he bequeathed, with other manuscripts, to the Council of Knights of the East and West, was published in 1780, under the title of *Écossais de Saint André, contenant le développement total de l'art royal de la Franche-Maçonnerie.* Subsequently, on the organization of the Ancient and Accepted Scottish Rite, the degree was adopted as the Twenty-ninth of its series, and is considered as one of the most important and philosophic of the Scottish system. Its fabrication is, indeed, an evidence of the intellectual genius of its inventor.

Ragon, in his *Orthodoxie Maçonnique*, attributes to Tschoudy the fabrication of the Rite of Adonhiramite Masonry, and the authorship of the *Recueil Précieux*, which contains the description of the Rite. But the first edition of the *Recueil*, with the acknowledged authorship of Guillemain de St. Victor, appeared in 1781. This is probably about the date of the introduction of the Rite, and is just twelve years after Tschoudy had gone to his eternal rest.

Tschoudy also indulged in light literature, and several romances are attributed to him, the only one of which now known, entitled *Thérèse Philosophe*, does not add to his reputation.

Chemins Desponts (*Encyc. Maçon.*, i., 143) says: "The Baron Tschoudy, whose birth gave him a distinguished rank in society, left behind him the reputation of an excellent man, equally remarkable for his social virtues, his genius, and his military talents." Such appears to have been the general opinion of those who were his contemporaries or his immediate successors. He died at Paris, May 28, 1769.

Tsedakah. צדקה, Justice. The first step of the mystical ladder, known to the Kadosh, Thirtieth Degree A. A. Scottish Rite.

Tsidoni. צידני, Venator. A Seeker or Inquirer. A name used in the Twenty-second Degree of the A. A. Scottish Rite.

Tsoim. צעים. A term used infrequently to designate visitors.

Tuapholl. A term used by the Druids to designate an unhallowed circumambulation

around the sacred cairn, or altar; the movement being against the sun, that is, from west to east by the north, the cairn being on the left hand of the circumambulator.

Tubal Cain. Of Tubal Cain, the sacred writings, as well as the Masonic legends, give us but scanty information. All that we hear of him in the Book of Genesis is that he was the son of Lamech and Zillah, and was "an instructor of every artificer in brass and iron." The Hebrew original does not justify the common version, for לטש, *lotesh*, does not mean "an instructor," but "a sharpener"—one who whets or sharpens instruments. Hence Dr. Raphall translates the passage as one "who sharpened various tools in copper and iron." The authorized version has, however, almost indelibly impressed the character of Tubal Cain as the father of artificers; and it is in this sense that he has been introduced from a very early period into the legendary history of Masonry.

The first Masonic reference to Tubal Cain is found in the "Legend of the Craft," where he is called "the founder of smith-craft." I cite this part of the legend from the Dowland MS. simply because of its more modern orthography; but the story is substantially the same in all the old manuscript Constitutions. In that Manuscript we find the following account of Tubal Cain:

"Before Noah's flood there was a man called Lamech, as it is written in the Bible, in the fourth chapter of Genesis; and this Lamech had two wives, the one named Ada and the other named Zilla; by his first wife, Ada, he got two sons, the one Jubal, and the other Jabal: and by the other wife he got a son and a daughter. And these four children founded the beginning of all the sciences in the world. The elder son, Jabal, founded the science of geometry, and he carried flocks of sheep and lambs into the fields, and first built houses of stone and wood, as it is noted in the chapter above named. And his brother Jubal founded the science of music and songs of the tongue, the harp and organ. And the third brother, Tubal Cain, founded smith-craft, of gold, silver, copper, iron, and steel, and the daughter founded the art of weaving. And these children knew well that God would take vengeance for sin, either by fire or water, wherefore they wrote the sciences that they had found, on two pillars that they might be found after Noah's flood. The one pillar was marble, for that would not burn with fire; and the other was clepped laterns, and would not drown in noe water."

Similar to this is an old Rabbinical tradition, which asserts that Jubal, who was the inventor of writing as well as of music, having heard Adam say that the universe would be twice destroyed, once by fire and once by water, inquired which catastrophe would first occur; but Adam refusing to inform him, he inscribed the system of music which he had invented upon two pillars of stone and brick. A more modern Masonic tradition ascribes the construction of these pillars to Enoch.

To this account of Tubal Cain must be added the additional particulars, recorded by Josephus, that he exceeded all men in strength, and was renowned for his warlike achievements.

The only other account of the proto-metallurgist that we meet with in any ancient author is that which is contained in the celebrated fragment of Sanconiatho, who refers to him under the name of Chrysor, which is evidently, as Bochart affirms, a corruption of the Hebrew *chores ur*, a worker in fire, that is, a smith. Sanconiatho was a Phœnician author, who is supposed to have flourished before the Trojan war, probably, as Sir William Drummond suggests, about the time when Gideon was Judge of Israel, and who collected the different accounts and traditions of the origin of the world which were extant at the period in which he lived. A fragment only of this work has been preserved, which, translated into Greek by Philo Byblius, was inserted by Eusebius in his *Præparatio Evangelica*, and has thus been handed down to the present day. That portion of the history by Sanconiatho, which refers to Tubal Cain, is contained in the following words:

"A long time after the generation of Hypsoaranios, the inventors of hunting and fishing, Agreas and Alieas, were born: after whom the people were called hunters and fishers, and from whom sprang two brothers, who discovered iron, and the manner of working it. One of these two, called Chrysor, was skilled in eloquence, and composed verses and prophecies. He was the same with Hephaistos, and invented fishing-hooks, bait for taking fish, cordage and rafts, and was the first of all mankind who had navigated. He was therefore worshiped as a god after his death, and was called Diamichios. It is said that these brothers were the first who contrived partition walls of brick."

Hephaistos, it will be observed, is the Greek of the god who was called by the Romans Vulcan. Hence the remark of Sanconiatho, and the apparent similarity of names as well as occupations, have led some writers of the last, and even of the present, century to derive Vulcan from Tubal Cain by a process not very devious and therefore familiar to etymologists. By the omission in Tubal Cain of the initial T, which is the Phœnician article, and its valueless vowel, we get *Balcan*, which, by the interchangeable nature of B and V, is easily transformed to *Vulcan*.

"That Tubal Cain," says Bishop Stillingfleet (*Orig. Sac.*, p. 292), "gave first occasion to the name and worship of Vulcan, hath been very probably conceived, both from the very great affinity of the names, and that Tubal Cain is expressly mentioned to be an instructor of every artificer in brass and iron, and as near relation as Apollo had to Vulcan, Jubal had to Tubal Cain, who was the inventor of music, or the father of all such as handle the harp and organ, which the Greeks attribute to Apollo."

Vossius, in his treatise *De Idolatria* (lib. i., cap. 36), makes this derivation of Vulcan from Tubal Cain. But Bryant, in his *Analysis of Ancient Mythology* (vol. i., p. 139), denies the etymology and says that among the Egyptians and Babylonians, Vulcan was equivalent to Orus or Osiris, symbols of the sun. He traces the name to the words *Baal Cahen*, Holy Bel, or sacred Lord. Bryant's etymology may be adopted, however, without any interference with the identity of Vulcan and Tubal Cain. He who discovered the uses of fire, may well, in the corruptions of idolatry, have typified the solar orb, the source of all heat. It might seem that Tubal is an attribute compounded of the definite particle T and the word Baal, signifying Lord. Tubal Cain would then signify "the Lord Cain." Again, *dhu* or *du*, in Arabic, signifies Lord; and we trace the same signification of this affix, in its various interchangeable forms of *Du*, *Tu*, and *Di*, in many Semitic words. But the question of the identical origin of Tubal Cain and Vulcan has at length been settled by the researches of comparative philologists. Tubal Cain is Semitic in origin, and Vulcan is Aryan. The latter may be traced to the Sanskrit *ulka*, a firebrand, from which we get also the Latin *fulgur* and *fulmen*, names of the lightning.

From the mention made of Tubal Cain in the "Legend of the Craft," the word was long ago adopted as significant in the primary degrees, and various attempts have been made to give it an interpretation.

Hutchinson, in an article in his *Spirit of Masonry*, devoted to the consideration of the Third Degree, has the following reference to the word (p. 162):

"The Mason advancing to this state of Masonry, pronounces his own sentence, as confessional of the imperfection of the second stage of his profession, and as probationary of the exalted degree to which he aspires, in this Greek distich, Τυμβοιχοεω, Struo tumulum: 'I prepare my sepulchre; I make my grave in the pollutions of the earth; I am under the shadow of death.' This distich has been vulgarly corrupted among us, and an expression takes place scarcely similar in sound, and entirely inconsistent with Masonry, and unmeaning in itself."

But however ingenious this interpretation of Hutchinson may be, it is generally admitted that it is incorrect.

The modern English Masons, and through them the French, have derived Tubal Cain from the Hebrew *tebel*, earth, and *kanah*, to acquire possession, and, with little respect for the grammatical rules of the Hebrew language, interpret it as meaning *worldly possessions*.

In the Hemming lectures, now the authorized English system, we find the answer to the question, "What does Tubal Cain denote?" is "Worldly possessions." And Delaunay, in his *Thuilleur* (p. 17), denies the reference to the proto-smith, and says: "If we reflect on the meaning of the two Hebrew words, we will easily recognize in their connection the secret wish of the hierophant, of the Templar, of the Freemason, and of every mystical sect, to govern the world in accordance with its own principles and its own laws." It is fortunate, I think, that the true meaning of the words will authorize no such interpretation. The fact is, that even if Tubal Cain were derived from *tebel* and *kanah*, the precise rules of Hebrew construction would forbid affixing to their union any such meaning as "worldly possessions." Such an interpretation of it in the French and English systems is, therefore, a very forced and inaccurate one.

The use of Tubal Cain as a significant word in the Masonic ritual is derived from the "Legend of the Craft," by which the name was made familiar to the Operative and then to the Speculative Masons; and it refers not symbolically, but historically to his Scriptural and traditional reputation as an artificer. If he symbolized anything, it would be labor; and a Mason's labor is to acquire *truth*, and not *worldly possessions*. The English and French interpretation has fortunately never been introduced into this country.

Tub Baani Amal Abal. Heb. עמל אבל טוב בעני. It is just to reward labor. An expression found in the Thirteenth Degree A. A. Scottish Rite.

Tune, Freemasons'. The air of the song written by Matthew Birkhead, and published in the *Book of Constitutions* of 1723, with the title of "the Entered Prentice's Song," is familiarly and distinctively known as "the Freemasons' Tune." Mr. William Chappell, in a work entitled *Popular Music of the Olden Time*, gives the following interesting account of it:

"This tune was very popular at the time of the ballad operas, and I am informed that the same words are still sung to it at Masonic meetings.

"The air was introduced in *The Village Opera*, *The Chambermaid*, *The Lottery*, *The Grub-Street Opera*, and *The Lover his own Rival*. It is contained in the third volume of *The Dancing Master*, and of Walsh's *New Country Dancing Master*. Words and music are included in Watt's *Musical Miscellany*, iii., 72, and in *British Melody*, or *The Musical Magazine*, fol., 1739. They were also printed on broadsides.

"In the *Gentlemen's Magazine*, for October, 1731, the first stanza is printed as 'A Health, by Mr. Birkhead.' It seems to be there quoted from 'The Constitutions of the Freemasons,' by the Rev. James Anderson, A.M., one of the Worshipful Masters.

"There are several versions of the tune. One in *Pills to Purge Melancholy*, ii., 230 (1719), has a second part; but that being almost a repetition of the first, taken an octave higher, is out of the compass of ordinary voices, and has therefore been generally rejected.

"In *A Complete Collection of Old and New English and Scotch Songs*, ii., 172 (1735), the

name is given as 'Ye Commoners and Peers'; but Leveridge composed another tune to these words.

"In *The Musical Mason, or Freemasons' Pocket Companion*, being a collection of songs used in all Lodges, to which are added the 'Freemasons' March and Ode' (8vo, 1791), this is entitled 'The Entered Apprentice's Song.'

"Many stanzas have been added from time to time, and others have been altered."

Turanian. One of the three historical divisions of religion—the other two being the Aryan and the Semitic—and embraces the two sacred codes of China, viz., those of Confucius and Lao-tse.

Turban. The usual head-dress worn in Eastern nations, consisting of a quilted cap, without rim, and a sash or scarf of cotton or linen wound about the cap. In Royal Arch Chapters, the turban, of a purple color, constitutes the head-dress of the Scribe, because that officer represents the Jewish prophet, Haggai.

Turcopolier. The third dignity in the Order of Knights Hospitalers of St. John, or Knights of Malta. It took its name from the Turcopoles, a sort of light horse mentioned in the history of the Christian wars in Palestine. The office of Turcopolier was held by the Conventional Bailiff, or head of the language of England. He had the command of the cavalry of the Order.

Turkey. A writer in the *Freemasons' Quarterly Review* (1844, p. 21) says that there was a Masonic meeting in Constantinople, at which some Turks were initiated, but that the government prohibited the future meetings. This must have been an irregular Lodge, for organized Masonry was not introduced into Turkey until 1838, when the first Lodges were erected by the Grand Lodge of England. They were, however, soon discontinued, in consequence of the opposition of the Mohammedan hierarchy. A more tolerant spirit, however, now exists, and there is a Lodge (No. 687) at Constantinople under the jurisdiction of the Grand Lodge of England. There are also four Lodges at Constantinople, under the Grand Orient of France; four at Smyrna and one at Constantinople, under the Grand Orient of Italy; and one at Constantinople (No. 1049) under the Grand Lodge of Scotland. There are also two Royal Arch Chapters—at Smyrna and Constantinople, chartered by the Supreme Chapter of Scotland. There are also two Rose Croix Chapters—one, from the Supreme Council of England, in Constantinople; and the other, from the Grand Orient of Italy, in Smyrna. In these Lodges many native Mohammedans have been initiated. The Turks, however, have always had secret societies of their own, which has led some writers to suppose, erroneously, that Freemasonry existed long before the date of its actual introduction. Thus, the Begtaschi form a secret society in Turkey, numbering many thousands of Mussulmans in its ranks, and none but a true Moslem can be admitted to the brotherhood. It is a religious Order, and was founded in the year 1328 by the Hadji Begtasch, a famous dervish, from whom it derives its name. The Begtaschi have certain signs and passwords by which they are enabled to recognize the "true brethren," and by which they are protected from vagabond impostors. A writer in *Notes and Queries* says, in allusion to this society, that "One day, during the summer of 1855, an English merchant captain, while walking through the streets of a Turkish quarter of Constantinople, encountered a Turk, who made use of various signs of Freemasonry, some of which, the captain being a Mason, he understood and others he did not." It is, however, probable in this instance, considering the date, that the Turk was really a Mason, and possessed some higher degrees, which had not been attained by the English captain. There is also another equally celebrated Order in Turkey, the Melewi, who have also secret modes of recognition.

Turquoise. Oliver says (*Landm.*, ii., 521) that the first stone in the third row of the high priest's breastplate "was a ligure, hyacinth, or turquoise." The stone was a ligure; but Oliver is incorrect in supposing that it is a synonym of either a hyacinth or a turquoise, which are stones of a very different nature.

Tuscan Order. The simplest of the five orders of architecture, as its columns are never fluted, and it does not allow the introduction of any kind of ornament. It is one of the two modern orders, not being found in any ancient example. Hence it is of no value in Masonic symbolism.

Twelve. Twelve being composed of the mystical numbers $7+5$ or of 3×4, the triad multiplied by the quaternion, was a number of considerable value in ancient systems. Thus there were twelve signs of the zodiac, twelve months in the year, twelve tribes of Israel, twelve stones in the pectoral, and twelve oxen supporting the molten sea in the Temple. There were twelve apostles in the new law, and the New Jerusalem has twelve gates, twelve foundations, is twelve thousand furlongs square, and the number of the sealed is twelve times twelve thousand. Even the Pagans respected this number, for there were in their mythology twelve superior and twelve inferior gods.

Twelve Illustrious Knights. The Eleventh Degree of the Ancient and Accepted Scottish Rite; more correctly *Sublime Knight Elected*, which see.

Twelve-Lettered Name. The Jews had among their Divine names, besides the Tetragrammaton, a two-lettered name, which was *Jah*, a twelve-lettered and a forty-two-lettered name. None of these, however, were so sacred and unutterable as the Tetragrammaton. Maimonides says of the twelve-lettered name, that it was formerly used instead of Adonai, as being more emphatic, in place of the Tetragrammaton, whenever they came

to that sacred name in reading. It was not, however, like the Tetragrammaton, communicated only to their disciples, but was imparted to any that desired its knowledge. But after the death of Simeon the Just, the Tetragrammaton ceasing to be used at all, the twelve-lettered name was substituted in blessing the people; and then it became a secret name, and was communicated only to the most pious of the priests. What was the twelve-lettered name is uncertain, though all agree that it was not a name, but a sentence composed of twelve letters. Rabbi Bechai says it was formed by a triple combination and permutation of the four letters of the Tetragrammaton; and there are other explanations equally unsatisfactory.

There was also a forty-two-lettered name, composed, says Bechai, of the first forty-two letters of the Book of Genesis. Another and a better explanation has been propounded by Franck, that it is formed out of the names of the ten Sephiroth, which with the ו, vau, or *and*, amount exactly to forty-two letters. There was another name of seventy-two letters, which is still more inexplicable. Of all these names, Maimonides (*More Nev.*, I. lxii.) says that, as they could not possibly constitute one word, they must have been composed of several words, and he adds:

"There is no doubt that these words conveyed certain ideas, which were designed to bring man nearer to the true conception of the Divine essence, through the process we have already described. These words, composed of numerous letters, have been designated as a single name, because, like all accidental proper names, they indicate one single object; and to make the object more intelligible, several words are employed, as many words are sometimes used to express one single thing. This must be well understood, that they taught the ideas indicated by these names, and not the simple pronunciation of the meaningless letters."

Twelve Original Points of Masonry. The old English lectures, which were abrogated by the United Grand Lodge of England in 1813, when it adopted the system of Hemming, contained the following passage:

"There are in Freemasonry twelve original points, which form the basis of the system, and comprehend the whole ceremony of initiation. Without the existence of these points, no man ever was, or can be, legally and essentially received into the Order. Every person who is made a Mason must go through these twelve forms and ceremonies, not only in the first degree, but in every subsequent one."

Hence, it will be seen that our ancient Brethren deemed these "Twelve Original Points of Masonry," as they were called, of the highest importance to the ceremony of initiation, and they consequently took much pains, and exercised much ingenuity, in giving them a symbolical explanation. But as, by the decree of the Grand Lodge, they no longer constitute a part of the English ritual, and were never introduced into this country, where the "Four Perfect Points" constitute an inadequate substitute, there can be no impropriety in presenting a brief explanation of them, for which I shall be indebted to the industry of Oliver, who has treated of them at great length in the eleventh lecture of his *Historical Landmarks*.

The ceremony of initiation, when these points constituted a portion of the ritual, was divided into twelve parts, in allusion to the twelve tribes of Israel, to each of which one of the points was referred, in the following manner:

1. The *opening of the Lodge* was symbolized by the tribe of Reuben, because Reuben was the first-born of his father Jacob, who called him "the beginning of his strength." He was, therefore, appropriately adopted as the emblem of that ceremony which is essentially the beginning of every initiation.

2. The *preparation* of the candidate was symbolized by the tribe of Simeon, because Simeon prepared the instruments for the slaughter of the Shechemites; and that part of the ceremony which relates to offensive weapons, was used as a token of our abhorrence for the cruelty exercised on that occasion.

3. The *report* of the Senior Deacon referred to the tribe of Levi, because, in the slaughter of the Shechemites, Levi was supposed to have made a signal or report to Simeon his brother, with whom he was engaged in attacking these unhappy people while unprepared for defense.

4. The *entrance* of the candidate into the Lodge was symbolized by the tribe of Judah, because they were the first to cross the Jordan and enter the promised land, coming from the darkness and servitude, as it were, of the wilderness into the light and liberty of Canaan.

5. The *prayer* was symbolized by the tribe of Zebulun, because the blessing and prayer of Jacob were given to Zebulun, in preference to his brother Issachar.

6. The *circumambulation* referred to the tribe of Issachar, because, as a thriftless and indolent tribe, they required a leader to advance them to an equal elevation with the other tribes.

7. *Advancing* to the altar was symbolized by the tribe of Dan, to teach us, by contrast, that we should advance to truth and holiness as rapidly as that tribe advanced to idolatry, among whom the golden serpent was first set up to receive adoration.

8. The *obligation* referred to the tribe of Gad, in allusion to the solemn vow which was made by Jephthah, Judge of Israel, who was of that tribe.

9. The *entrusting* of the candidate with the mysteries was symbolized by the tribe of Asher, because he was then presented with the rich fruits of Masonic knowledge, as Asher was said to be the inheritor of fatness and royal dainties.

10. The *investiture* of the lambskin, by

which the candidate is declared free, referred to the tribe of Naphtali, which was invested by Moses with a peculiar freedom, when he said, "O Naphtali, satisfied with favor, and full with the blessing of the Lord, possess thou the West and the South."

11. The *ceremony of the northeast corner of the Lodge* referred to Joseph, because, as this ceremony reminds us of the most superficial part of Masonry, so the two half tribes of Ephraim and Manasseh, of which the tribe of Joseph was composed, were accounted to be more superficial than the rest, as they were descendants of the grandsons only of Jacob.

12. The *closing of the Lodge* was symbolized by the tribe of Benjamin, who was the youngest of the sons of Jacob, and thus closed his father's strength.

Such were the celebrated twelve original points of Freemasonry of the ancient English lectures. They were never introduced into this country, and they are now disused in England. But it will be seen that, while some of the allusions are perhaps abstruse, many of them are ingenious and appropriate. It will not, perhaps, be regretted that they have become obsolete; yet it cannot be denied that they added something to the symbolism and to the religious reference of Freemasonry. At all events, they are matters of Masonic antiquity, and, as such, are not unworthy of attention.

Twenty-Four-Inch Gage. A rule two feet long, which is divided by marks into twenty-four parts, each one inch in length. The Operative Mason uses it to take the necessary dimensions of the stone that he is about to prepare. It has been adopted as one of the working-tools of the Entered Apprentice in Speculative Masonry, where its divisions are supposed to represent hours. Hence its symbolic use is to teach him to measure his time so that, of the twenty-four hours of the day, he may devote eight hours to the service of God and a worthy distressed brother, eight hours to his usual vocation, and eight to refreshment and sleep. In the symbolic language of Masonry, therefore, the twenty-four-inch gage is a symbol of time well employed.

Twenty-One. A number of mystical import, partly because it is the product of 3 and 7, the most sacred of the odd numbers, but especially because it is the sum of the numerical value of the letters of the Divine name, *Eheyeh*, thus:

ה י ה א
5 + 10 + 5 + 1 = 21.

It is little valued in Masonry, but is deemed of great importance in the Kabbala and in Alchemy; in the latter, because it refers to the twenty-one days of distillation necessary for the conversion of the grosser metals into silver.

Twenty-Seven. Although the number twenty-seven is found in the degree of Select Master and in some of the other high degrees, it can scarcely be called in itself a sacred number. It derives its importance from the fact that it is produced by the multiplication of the square of three by three, thus: $3 \times 3 \times 3 = 27$.

Twenty-Six. This is considered by the Kabbalists as the most sacred of mystical numbers, because it is equal to the numerical value of the letters of the Tetragrammaton, thus:

ה ו ה י
5 + 6 + 5 + 10 = 26.

Two-Lettered Name. The title given by the Talmudists to the name of God, יה, or *Jah*, which see.

Tyler. *Tyle* and *Tyler* are the old and now obsolete spelling of *Tile* and *Tiler*, which see.

Type. In the science of symbology it is the picture or model of something of which it is considered as a symbol. Hence the word type and symbol are in this sense synonymous. Thus the tabernacle was a type of the Temple, as the Temple is a type of the Lodge.

Typhon. The brother and slayer of Osiris, in the Egyptian mythology. As Osiris was a type or symbol of the sun, Typhon was the symbol of winter, when the vigor, heat, and, as it were, life of the sun are destroyed, and of darkness as opposed to light.

Tyre. An ancient city of Phœnicia, which in the time of King Solomon was celebrated as the residence of King Hiram, to whom that monarch and his father David were indebted for great assistance in the construction of the Temple at Jerusalem. Tyre was distant from Jerusalem about one hundred and twenty miles by sea, and was thirty miles nearer by land. An intercourse between the two cities and their respective monarchs was, therefore, easily cultivated. The inhabitants of Tyre were distinguished for their skill as artificers, especially as workers in brass and other metals; and it is said to have been a principal seat of that skilful body of architects known as the Dionysiac fraternity.

The city of Sidon, which was under the Tyrian government, was but twenty miles from Tyre, and situated in the forest of Lebanon. The Sidonians were, therefore, naturally wood-cutters, and were engaged in felling the trees, which were afterward sent on floats by sea from Tyre to Joppa, and thence carried by land to Jerusalem, to be employed in the Temple building.

Dr. Morris, who visited Tyre in 1868, describes it (*Freemasonry in the Holy Land*, p. 91) as a city under ground, lying, like Jerusalem, twenty to fifty feet beneath a *débris* of many centuries. It consists, to use the language of a writer he has cited, of "prostrate and broken columns, dilapidated temples, and mounds of buried fragments."

Tyre, Quarries of. It is an error of Oliver, and some other writers, to suppose that the stones of the Temple of Jerusalem were furnished from the quarries of Tyre.

If there were such quarries, they were not used for that purpose, as the stones were taken from the immediate vicinity of the edifice. (See *Quarries.*)

Tyrian Freemasons. Those who sustain the hypothesis that Freemasonry originated at the Temple of Solomon have advanced the theory that the Tyrian Freemasons were the members of the Society of Dionysiac Artificers, who at the time of the building of Solomon's Temple flourished at Tyre. Many of them were sent to Jerusalem by Hiram, King of Tyre, to assist King Solomon in the construction of his Temple. There, uniting with the Jews, who had only a knowledge of the speculative principles of Freemasonry, which had been transmitted to them from Noah, through the patriarchs, the Tyrian Freemasons organized that combined system of Operative and Speculative Masonry which continued for many centuries, until the beginning of the eighteenth, to characterize the Institution. This hypothesis is maintained with great ingenuity by Lawrie in his *History of Freemasonry*, or by Dr. Brewster, if he was really the author of that work, and until recently it has been the most popular theory respecting the origin of Masonry. But as it is wanting in the support of historical evidence, it has yielded to the more plausible speculations of recent writers.

U

U. The twenty-first letter of the English alphabet, is a modification of the Greek letter Υ, *upsilon;* it is in the Hebrew וּ, or in the Chaldaic and hieroglyphical, the head of an animal with horns, hence its symbolism. U has a close affinity to V, hence they were formerly interchanged in writing and printing.

U.·. D.·. Letters placed after the names of Lodges or Chapters which have not yet received a Warrant of Constitution. They signify *Under Dispensation.*

Uden, Conrad Friederich. A Masonic writer of some celebrity. He was a Doctor of Medicine, and at one time a Professor in Ordinary of the University of Dorpat; afterward an Aulic Counselor and Secretary of the Medical College of St. Petersburg. He was from 1783 to 1785 the editor of the *Archiv für Freimaurerei und Rosenkreuzer*, published during those years at Berlin. This work contains much interesting information concerning Rosicrucianism. He also edited, in 1785 and 1786, at Altona, the *Ephemeriden der gesammten Freimaurerei auf das Logenjahr 1785 und 1786.*

Unaffiliated Mason. A Mason who is not a member of any Lodge. As this class of Masons contribute nothing to the revenues nor to the strength of the Order, while they are always willing to partake of its benefits, they have been considered as an encumbrance upon the Craft, and have received the general condemnation of Grand Lodges.

It is evident that, anterior to the present system of Lodge organization, which dates about the end of the last century, there could have been no unaffiliated Masons. And, accordingly, the first reference that we find to the duty of Lodge membership is in the Charges, published in 1723, in Anderson's *Constitutions*, where it is said, after describing a Lodge, that "every Brother ought to belong to one"; and that "in ancient times, no Master or Fellow could be absent from it, especially when warned to appear at it, without incurring a severe censure, until it appeared to the Master and Wardens that pure necessity hindered him." (*Constitutions*, 1723, p. 51.) In this last clause, Anderson evidently refers to the regulation in the Old Constitutions, that required attendance on the Annual Assembly. For instance, in the oldest of these, the Halliwell or Regius MS., it is said (we modernize the language) "that every Master that is a Mason must be at the General Congregation, if he is told in reasonable time where the Assembly shall be holden; and to that Assembly he must go, unless he have a reasonable excuse." (Ll. 107–112.)

But the "Assembly" was rather in the nature of a Grand Lodge, and neglect to attend its annual meeting would not place the offender in the position of a modern unaffiliated Mason. But after the organization of subordinate Lodges, a permanent membership, which had been before unknown, was then established; and as the revenues of the Lodges, and through them of the Grand Lodge, were to be derived from the contributions of the members, it was found expedient to require every Mason to affiliate with a Lodge, and hence the rule adopted in the Charge already cited. Yet, in Europe, non-affiliation, although deemed to some extent a Masonic offense, has not been visited by any penalty, except that which results from a deprivation of the ordinary advantages of membership in any association.

The modern Constitution of England, however, prescribes that "no brother who has ceased to be a subscribing member of a Lodge shall be permitted to visit any one Lodge more than once until he again becomes

a subscribing member of some Lodge." (Rule 152.) He is permitted to visit each Lodge once, because it is supposed that this visit is made for the purpose of enabling him to make a selection of the one in which he may prefer working. But afterward he is excluded, in order to discountenance those brethren who wish to continue members of the Order, and to partake of its benefits, without contributing to its support. The Constitutions of the Grand Lodges of Ireland and Scotland are silent upon the subject, nor is any penalty prescribed for unaffiliation by any of the Grand Lodges of the Continent of Europe.

In America a different view has been taken of the subject, and its Grand Lodges have, with great unanimity, denounced unaffiliated Masons in the strongest terms of condemnation, and visited them with penalties, which vary, however, to some extent in the different jurisdictions. There is, however, no Grand Lodge in the United States that has not concurred in the opinion that the neglect or refusal of a Mason to affiliate with a Lodge is a Masonic offense, to be visited by some penalty and a deprivation of some rights.

The following principles may be laid down as constituting the law in America on the subject of unaffiliated Masons:

1. An unaffiliated Mason is still bound by all those Masonic duties and obligations which refer to the Order in general, but not by those which relate to Lodge organization.

2. He possesses, reciprocally, all those rights which are derived from membership in the Order, but none of those which result from membership in a Lodge.

3. He has a right to assistance when in imminent peril, if he asks for that assistance in the conventional way.

4. He has no right to pecuniary aid from a Lodge.

5. He has no right to visit Lodges, or to walk in Masonic processions.

6. He has no right to Masonic burial.

7. He still remains subject to the government of the Order, and may be tried and punished for any offense by the Lodge within whose geographical jurisdiction he resides.

8. And, lastly, as non-affiliation is a violation of Masonic law, he may, if he refuses to abandon that condition, be tried and punished for it, even by expulsion, if deemed necessary or expedient, by any Grand Lodge within whose jurisdiction he lives.

Unanimous Consent. In the beginning of the eighteenth century, when Masonry was reviving from the condition of decay into which it had fallen, and when the experiment was tried of transforming it from a partly operative to a purely speculative system, the great object was to maintain a membership which, by the virtuous character of those who composed it, should secure the harmony and prosperity of the infant Institution. A safeguard was therefore to be sought in the care with which Masons should be selected from those who were likely to apply for admission. It was the quality, and not the quantity, that was desired. This safeguard could only be found in the unanimity of the ballot. Hence, in the sixth of the General Regulations, adopted in 1721, it is declared that "no man can be entered a Brother in any particular Lodge, or admitted to be a member thereof, without the *unanimous consent* of all the members of that Lodge then present when the candidate is proposed, and their consent is formally asked by the Master." (*Constitutions*, 1723, p. 59.) And to prevent the exercise of any undue influence of a higher power in forcing an unworthy person upon the Order, it is further said in the same article: "Nor is this inherent privilege subject to a dispensation; because the members of a particular Lodge are the best judges of it; and if a fractious member should be imposed on them, it might spoil their harmony, or hinder their freedom; or even break and disperse the Lodge." But a few years after, the Order being now on a firm footing, this prudent fear of "spoiling harmony," or "dispersing the Lodge," seems to have been lost sight of, and the brethren began in many Lodges to desire a release from the restrictions laid upon them by the necessity for unanimous consent. Hence Anderson says in his second edition: "But it was found inconvenient to insist upon unanimity in several cases. And, therefore, the Grand Masters have allowed the Lodges to admit a member if not above three ballots are against him; though some Lodges desire no such allowance." (*Constitutions*, 1738, p. 155.) This rule still prevails in England; and its modern Constitution still permits the admission of a Mason where there are not more than three ballots against him, though it is open to a Lodge to demand unanimity.

In the United States, where Masonry is more popular than in any other country, it was soon seen that the danger of the Institution lay not in the paucity, but in the multitude of its members, and that the only provision for guarding its portals was the most stringent regulation of the ballot. Hence, in almost, if not quite, all jurisdictions of the United States unanimous consent is required. And this rule has been found to work with such advantage to the Order, that the phrase, "the black ball is the bulwark of Masonry," has become a proverb.

Unfavorable Report. Should the committee of investigation on the character of a petitioner for initiation make an unfavorable report, the general usage is (although some Grand Lodges have decided otherwise) to consider the candidate rejected by such report, without proceeding to the formality of a ballot, which is therefore dispensed with. This usage is founded on the principles of common sense; for, as by the ancient Constitutions one black ball

is sufficient to reject an application, the unfavorable report of a committee must necessarily, and by consequence, include two unfavorable votes at least. It is therefore unnecessary to go into a ballot after such a report, as it is to be taken for granted that the brethren who reported unfavorably would, on a resort to the ballot, cast their negative votes. Their report is indeed virtually considered as the casting of such votes, and the applicant is therefore at once rejected without a further and unnecessary ballot.

Unhele. To uncover, or reveal. Spenser, in the *Faëry Queen*, says, "Then suddenly both would themselves unhele."

Uniformity of Work. An identity of forms in opening and closing, and in conferring the degrees, constitutes what is technically called uniformity of work. The expression has no reference, in its restricted sense, to the working of the same degrees in different Rites and different countries, but only to a similarity in the ceremonies practised by Lodges in the same Rite, and more especially in the same jurisdiction. This is greatly to be desired, because nothing is more unpleasant to a Mason, accustomed to certain forms and ceremonies in his own Lodge, than on a visit to another to find those forms and ceremonies so varied as to be sometimes scarcely recognizable as parts of the same Institution. So anxious are the dogmatic authorities in Masonry to preserve this uniformity, that in the charge to an Entered Apprentice he is instructed never to "suffer an infringement of our rites, or a deviation from established usages and customs." In the act of union in 1813, of the two Grand Lodges of England, in whose systems of working there were many differences, it was provided that a committee should be appointed to visit the several Lodges, and promulgate and enjoin one system, "that perfect reconciliation, unity of obligation, law, working, language, and dress, might be happily restored to the English Craft." (Article XV.) A few years ago, a writer in *C. W. Moore's Magazine*, proposed the appointment of delegates to visit the Grand Lodges of England, Scotland, and Ireland, that a system of work and lectures might be adopted, which should thereafter be rigidly enforced in both hemispheres. The proposition was not popular, and no delegation was ever appointed. It is well that it was so, for no such attempt could have met with a successful result.

It is a fact, that uniformity of work in Masonry, however much it may be desired, can never be attained. This must be the case in all institutions where the ceremonies, the legends, and the instructions are oral. The treachery of memory, the weakness of judgment, and the fertility of imagination, will lead men to forget, to diminish, or to augment, the parts of any system which are not prescribed within certain limits by a written rule. The Rabbis discovered this when the Oral Law was becoming perverted, and losing its authority as well as its identity by the interpretations that were given to it in the schools of the Scribes and Prophets. And hence, to restore it to its integrity, it was found necessary to divest it of its oral character and give to it a written form. To this are we to attribute the origin of the two Talmuds which now contain the essence of Jewish theology. So, while in Masonry we find the esoteric ritual continually subjected to errors arising mainly from the ignorance or the fancy of Masonic teachers, the monitorial instructions—few in Preston, but greatly enlarged by Webb and Cross—have suffered no change.

It would seem from this that the evil of non-conformity could be removed only by making all the ceremonies monitorial; and so much has this been deemed expedient, that a few years since the subject of a written ritual was seriously discussed in England. But the remedy would be worse than the disease. It is to the oral character of its ritual that Masonry is indebted for its permanence and success as an organization. A written, which would soon become a printed, ritual would divest Symbolic Masonry of its attractions as a secret association, and would cease to offer a reward to the laborious student who sought to master its mystical science. Its philosophy and its symbolism would be the same, but the books containing them would be consigned to the shelves of a Masonic library, their pages to be discussed by the profane as the common property of the antiquary, while the Lodges, having no mystery within their portals, would find but few visitors, and certainly no workers.

It is, therefore, a matter of congratulation that uniformity of work, however desirable and however unattainable, is not so important and essential as many have deemed it. Oliver, for instance, seems to confound in some of his writings the ceremonies of a degree with the landmarks of the Order. But they are very different. The landmarks, because they affect the identity of the Institution, have long since been embodied in its written laws, and unless by a wilful perversion, as in France, where the Grand Mastership has been abolished, can never be changed. But variations in the phraseology of the lectures, or in the forms and ceremonies of initiation, so long as they do not trench upon the foundations of symbolism on which the science and philosophy of Masonry are built, can produce no other effect than a temporary inconvenience. The errors of an ignorant Master will be corrected by his better instructed successor. The variation in the ritual can never be such as to destroy the true identity of the Institution. Its profound dogmas of the unity of God, and the eternal life, and of the universal brotherhood of man, taught in its symbolic method, will forever shine out preeminent

above all temporary changes of phraseology. Uniformity of work may not be attained, but uniformity of design and uniformity of character will forever preserve Freemasonry from disintegration.

Union, Grand Masters'. Efforts were made at various times in Germany to organize an association of the Grand Masters of the Grand Lodges of Germany. At length, through the efforts of Bro. Warnatz, the Grand Master of Saxony, the scheme was fully accomplished, and on May 31, 1868, the Grand Masters' Union—*Grossmiestertag*, literally, the diet of Grand Masters—assembled at the city of Berlin, the Grand Masters of seven German Grand Lodges being present. The meetings of this body, which are annual, are entirely unofficial; it claims no legislative powers, and meets only for consultation and advisement on matters connected with the ritual, the history, and the philosophy of Masonry.

Union Master's Degree. An honorary degree, said to have been invented by the Lodge of Reconciliation in England, in 1813, at the union of the two Grand Lodges, and adopted by the Grand Lodge of New York in 1819, which authorized its Lodges to confer it. It was designed to detect clandestine and irregular Masons, and consisted only of the investiture of the recipient with certain new modes of recognition.

Union of German Masons. (*Verein deutscher Maurer.*) An association of Freemasons of Germany organized at Potsdam, May 19, 1861. The Society meets annually at different places. Its professed object is the cultivation of Masonic science, the advancement of the prosperity and usefulness of the Order, and the closer union of the members in the bonds of brotherly love and affection.

Union of Scientific Freemasons. (*Bund scientifischer Freimaurer.*) An association founded, November 28, 1802, by Fessler, Fischer, Mossdorf, and other learned Masons of Germany. According to their act of union, all the members pledged themselves to investigate the history of Freemasonry, from its origin down to the present time, in all its different parts, with all its systems and retrogressions, in the most complete manner, and then to communicate what they knew to trustworthy brethren.

In the assemblies of the members, there were no rituals, nor ceremonies, nor any special vestments requisite, nor, indeed, any outward distinctions whatever. A common interest and the love of truth, a general aversion of all deception, treachery, and secrecy were the sentiments which bound them together, and made them feel the duties incumbent on them, without binding themselves by any special oath. Consequently, the members of the Scientific Union had all equal rights and obligations; they did not acknowledge a superior, or subordination to any Masonic authority whatever.

Any upright, scientifically cultivated Master Mason, a sincere seeker after truth, might join this Union, no matter to what Rite or Grand Lodge he belonged, if the whole of the votes were given in his favor, and he pledged himself faithfully to carry out the intention of the founders of the Order.

Each circle of scientific Masons was provided with a number of copies of the deed of union, and every new candidate, when he signed it, became a partaker of the privileges shared in by the whole; the Chief Archives and the center of the Confederation were at first to be in Berlin.

But the association, thus inaugurated with the most lofty pretensions and the most sanguine expectations, did not well succeed. "Brethren," says Findel (*Hist.*, English translation, p. 501), "whose co-operation had been reckoned upon, did not join; the active working of others was crippled by all sorts of scruples and hindrances, and Fessler's purchase of Kleinwall drew off his attention wholly from the subject. Differences of opinion, perhaps also too great egotism, caused dissensions between many members of the association and the brethren of the Lodge at Altenburg. Distrust was excited in every man's breast, and, instead of the enthusiasm formerly exhibited, there was only lukewarmness and disgust."

Other schemes, especially that of the establishment of a Saxon Grand Lodge, impaired the efforts of the Scientific Masons. The Union gradually sank out of sight, and finally ceased to exist.

Union of the Twenty-Two. See *German Union of Two and Twenty.*

United Friars, Fraternity of. A society established in 1785, for the "cultivation of a liberal and rational system of good fellowship." The place of meeting was known as the College of St. Luke. The society was a charitable one, giving liberally to the poor. There were a number of Colleges, the "London College languished, and finally died a natural death about 1825." Mackenzie gives the particulars of this Fraternity in the *Royal Masonic Cyclopædia.*

United Grand Lodge of England. The present Grand Lodge of England assumed that title in the year 1813, because it was then formed by the union of the Grand Lodge of the *Ancients*, called the "Grand Lodge of Free and Accepted Masons of England according to the Old Institutions," and the Grand Lodge of *Moderns*, called the "Grand Lodge of Free and Accepted Masons under the Constitution of England." The body thus formed, by which an end was put to the dissensions of the Craft which had existed in England for more than half a century, adopted the title, by which it has ever since been known, of the "United Grand Lodge of Ancient Freemasons of England."

United States of America. The history of the introduction of Freemasonry into the United States of America is discussed in this work under the titles of the different States into which the Union is divided, and to which therefore the reader is referred.

It may, however, be necessary to say, in a general view of the subject, that the first notice we have of Freemasonry in the United States is in 1729, in which year, during the Grand Mastership of the Duke of Norfolk, Mr. Daniel Coxe was appointed Provincial Grand Master for New Jersey. I have not, however, been able to obtain any evidence that he exercised his prerogative by the establishment of Lodges in that province, although it is probable that he did. In the year 1733, the "St. John's Grand Lodge" was opened in Boston, in consequence of a Charter granted, on the application of several brethren residing in that city, by Lord Viscount Montague, Grand Master of England. From that time Masonry was rapidly disseminated throughout the country by the establishment of Provincial Grand Lodges, all of which after the Revolutionary War, which separated the colonies from the mother country, assumed the rank and prerogatives of independent Grand Lodges. The history of these bodies being treated under their respective titles, the remainder of this article may more properly be devoted to the character of the Masonic organization in the United States.

The Rite practised in this country is most correctly called the American Rite. This title, however, has been adopted within only a comparatively recent period. It is still very usual with Masonic writers to call the Rite practised in this country the York Rite. The expression, however, is wholly incorrect. The Masonry of the United States, though founded, like that practised in every other country, upon the three Symbolic degrees which alone constitute the true York Rite, has, by its modifications and its adoption of high degrees, so changed the Rite as to give it an entirely different form from that which properly constitutes the pure York Rite. (See *American Rite.*)

In each State of the Union, and in most of the Territories, there is a Grand Lodge which exercises jurisdiction over the Symbolic degrees. The jurisdiction of the Grand Lodge, however, is exercised to a certain extent over what are called the higher bodies, namely, the Chapters, Councils, and Commanderies. For by the American construction of Masonic law, a Mason expelled by the Grand Lodge forfeits his membership in all of these bodies to which he may be attached. Hence a Knights Templar, or a Royal Arch Mason, becomes *ipso facto* suspended or expelled by his suspension or expulsion by a Symbolic Lodge, the appeal from which action lies only to the Grand Lodge. Thus the Masonic standing and existence of even the Grand Commander of a Grand Commandery is actually in the hands of the Grand Lodge, by whose decree of expulsion his relation with the body over which he presides may be dissevered.

Royal Arch Masonry is controlled in each State by a Grand Chapter. Besides these Grand Chapters, there is a General Grand Chapter of the United States, which, however, exercises only a moral influence over the State Grand Chapters, since it possesses "no power of discipline, admonition, censure, or instruction over the Grand Chapters." In Territories where there are no Grand Chapters, the General Grand Chapter constitutes subordinate Chapters, and over these it exercises plenary jurisdiction.

The next highest branch of the Order is Cryptic Masonry, which, although rapidly growing, is not yet as extensive as Royal Arch Masonry. It consists of two degrees, Royal and Select Master, to which is sometimes added the Superexcellent, which, however, is considered only as an honorary degree. These degrees are conferred in Councils which owe their obedience to Grand Councils. Only one Grand Council can exist in a State or Territory, as is the case with a Grand Lodge, a Grand Chapter, or a Grand Commandery. Grand Councils exist in many of the States, and in any State where no such body exists, the Councils are established by Charters emanating from any one of them. There is no General Grand Council. Efforts have been repeatedly made to establish one, but the proposition has not met with a favorable response from the majority of Grand Councils.

Templarism is governed by a Supreme body, whose style is the Grand Encampment of the United States, and this body, which meets triennially, possesses sovereign power over the whole Templar system in the United States. Its presiding officer is called Grand Master, and this is the highest office known to American Templarism. In most of the States there are Grand Commanderies, which exercise immediate jurisdiction over the Commanderies in the State, subject, however, to the superintending control of the Grand Encampment. Where there are no Grand Commanderies, Charters are issued directly to subordinate Commanderies by the Grand Encampment.

The Ancient and Accepted Scottish Rite is very popular in the United States. There are two Supreme Councils—one for the Southern Jurisdiction, which is the Mother Council of the world. Its nominal Grand East is at Charleston, South Carolina; but its Secretariat has been removed to Washington City since the year 1870. The other Council is for the Northern Jurisdiction. Its Grand East is at Boston, Massachusetts; but its Secretariat is at New York City. The Northern Council has jurisdiction over the States of Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, Pennsylvanua, New Jersey, Delaware, Ohio, Indiana, Illinois, and Wisconsin. The Southern Supreme Council exercises jurisdiction over all the other States and Territories of the United States.

Unity of God. In the popular mythology of the ancients there were many gods. It was to correct this false opinion, and to teach a purer theogony, that the initiations were invented. And so, as Warburton says,

"the famous secret of the mysteries was the unity of the Godhead." This, too, is the doctrine of Masonic initiation, which is equally distant from the blindness of atheism and the folly of polytheism.

Universality of Masonry. The boast of the Emperor Charles V., that the sun never set on his vast empire, may be applied with equal truth to the Order of Freemasonry. From east to west, and from north to south, over the whole habitable globe, are our Lodges disseminated. Wherever the wandering steps of civilized man have left their footprints, there have our temples been established. The lessons of Masonic love have penetrated into the wilderness of the West, and the red man of our soil has shared with his more enlightened brother the mysteries of our science; while the arid sands of the African desert have more than once been the scene of a Masonic greeting. Masonry is not a fountain, giving health and beauty to some single hamlet, and slaking the thirst of those only who dwell upon its humble banks; but it is a mighty stream, penetrating through every hill and mountain, and gliding through every field and valley of the earth, bearing in its beneficent bosom the abundant waters of love and charity for the poor, the widow, and the orphan of every land.

Universal Aurora, Society of the. Founded at Paris, in 1783, for the practise of mesmerism; Cagliostro, "the Divine Charlatan," taking an active part in its establishment. Very little at this day is known of it.

Universal Language. See *Language, Universal.*

Universal Harmony, Order of. See *Mesmeric Masonry.*

Universalists, Order of. A society of a Masonic bearing, founded by Retif de la Bretonne, in Paris, about 1841, and having but one degree.

Universi Terrarum, etc. Documents emanating from any of the bodies of the Ancient and Accepted Scottish Rite commence with the following epigraph: "Universi Terrarum Orbis Architectonis per Gloriam Ingentis," i. e., "By the Glory of the Great Architect of the Universe." This is the correct form as first published, in 1802, by the Mother Council at Charleston in its Circular of that year, and used in all its Charters and Patents.

Unknown Philosopher. One of the mystical and theosophic works written by Saint Martin, the founder of the Rite of Martinism, was entitled *Le Philosophe Inconnu*, or The Unknown Philosopher, whence the appellation was often given by his disciples to the author. A degree of his Rite also received the same name.

Unknown Superiors. When the Baron Von Hund established his system or Rite of Strict Observance, he declared that the Order was directed by certain Masons of superior rank, whose names as well as their designs were to be kept secret from all the brethren of the lower degrees; although there was an insinuation that they were to be found or to be heard of in Scotland. To these secret dignitaries he gave the title of "Superiores Incogniti," or Unknown Superiors. Many Masonic writers, suspecting that Jesuitism was at the bottom of all the Masonry of that day, asserted that S. I., the initials of Superiores Incogniti, meant really Societas Jesu, i. e., the Society of Jesus or the Jesuits. It is scarcely necessary now to say that the whole story of the Unknown Superiors was a myth.

"Unpublished Records of the Craft." A work thus entitled, edited by the late Bro. Hughan, was published in 1871, forming part of a book called *Masonic Sketches and Reprints* and containing many MSS. of value, theretofore unknown to the general Masonic public. Many others have since been traced, and the work of Masonic progress has a large field in the near future which will be productive of great historic good.

Untempered Mortar. In the lecture used in the United States in the early part of the present century, and in some parts of the country almost as recently as the middle of the century, the apprentices at the Temple were said to wear their aprons in the peculiar manner characteristic of that class that they might preserve their garments from being defiled by "untempered mortar." This is mortar which has not been properly mixed for use, and it thus became a symbol of passions and appetites not duly restrained. Hence the Speculative Apprentice was made to wear his apron in that peculiar manner to teach him that he should not allow his soul to be defiled by the "untempered mortar of unruly passions."

Unutterable Name. The Tetragrammaton, or Divine Name, which is more commonly called the Ineffable Name. The two words are precisely synonymous.

Unworthy Members. That there are men in our Order whose lives and characters reflect no credit on the Institution, whose ears turn coldly from its beautiful lessons of morality, whose hearts are untouched by its soothing influences of brotherly kindness, whose hands are not opened to aid in its deeds of charity, is a fact which we cannot deny, although we may be permitted to express our grief while we acknowledge its truth. But these men, though in the Temple, are not of the Temple; they are among us, but are not with us; they belong to our household, but they are not of our faith; they are of Israel, but they are not Israel. We have sought to teach them, but they would not be instructed; seeing, they have not perceived; and hearing, they have not understood the symbolic language in which our lessons of wisdom are communicated. The fault is not with us, that we have not given, but with them, that they have not received. And, indeed, hard and unjust would it be to censure the Masonic Institution, because, partaking of the infirmity and weakness of human wisdom and human means, it has been unable to give

strength and perfection to all who come within its pale. The denial of a Peter, the doubtings of a Thomas, or even the betrayal of a Judas, could cast no reproach on that holy band of apostles of which each formed a constituent part.

"Is Freemasonry answerable," says Dr. Oliver (*Landm.*, i., p. 148), "for the misdeeds of an individual Brother? By no means. He has had the advantage of Masonic instruction, and has failed to profit by it. He has enjoyed Masonic privileges, but has not possessed Masonic virtue." Such a man it is our duty to reform, or to dismiss; but the world should not condemn us, if we fail in our attempt at reformation. God alone can change the heart. Masonry furnishes precepts and obligations of duty which, if obeyed, must make its members wiser, better, happier men; but it claims no power of regeneration. Condemn when our instruction is evil, but not when our pupils are dull, and deaf to our lessons; for, in so doing, you condemn the holy religion which you profess. Masonry prescribes no principles that are opposed to the sacred teachings of the Divine Lawgiver, and sanctions no acts that are not consistent with the sternest morality and the most faithful obedience to government and the laws; and while this continues to be its character, it cannot, without the most atrocious injustice, be made responsible for the acts of its unworthy members.

Of all human societies, Freemasonry is undoubtedly, under all circumstances, the fittest to form the truly good man. But however well conceived may be its laws, they cannot completely change the natural disposition of those who ought to observe them. In truth, they serve as lights and guides; but as they can only direct men by restraining the impetuosity of their passions, these last too often become dominant, and the Institution is forgotten.

Upadevas. Minor works regarded as appendices to the four Canonical Vedas, and comprising the *Ayurveda*, on medicine, the *Dhanurveda*, on archery, the *Gândharvaveda*, on music, and the *Silpasâstra*, or *Arthasastras*, on mechanics and other practical subjects. These were looked upon as inspired works and so classed.

Upanishad. ("Mystic.") A name given to certain Sanskrit works, of which about 150 are known, founded upon the Brahmana portion of the Vedas, and containing the "mysterious doctrine" of the process of creation, the nature of a Supreme Being, and its relation to the human soul. The older Upanishads are placed among the Sruti, or writings supposed to be inspired. (See *Sruti*.)

Upper Chambers. The practise of holding Masonic Lodges in the upper rooms of houses is so universal that, in all my experience, I have no knowledge of a single instance in which a Lodge has been held in a room on the first floor of a building. The most apparent reason for this is, that security from being overseen or overheard may be thus obtained, and hence Dr. Oliver says, in his *Book of the Lodge* (p. 44), that "a Masonic hall should be isolated, and, if possible, surrounded with lofty walls. . . . As, however, such a situation in large towns, where Masonry is usually practised, can seldom be obtained with convenience to the brethren, the Lodge should be formed in an upper story." This, as a practical reason, will be perhaps sufficient to Masons in general. But to those who are more curious, it may be well to say, that for this custom there is also a mystical reason of great antiquity.

Gregory, in his *Notes and Observations on some Passages of Scripture* (1671, p. 17), says: "The upper rooms in Scripture were places in that part of the house which was highest from the ground, set apart by the Jews for their private orisons and devotions, to be addressed towards Solomon's Temple." This room received, in the Hebrew language, the appellation of Alijah, which has been translated by the Greek *huperoon*, and improperly by the Latin *cœnaculum*. The Hebrew and the Greek both have the signification of an upper room, while the Latin appellative would give the idea of a dining-room or place for eating, thus taking away the sacred character of the apartment. The Alijah was really a secret chamber or recess in the upper part of the house, devoted to religious uses. Hence the wise men or Rabbis of Israel are called by the Talmudists beni Alijah, or "the sons of the upper or secret room." And so, in Psalm civ. 2, 3, the Psalmist speaks of God as stretching out the heavens like a curtain, and laying the beams of his chambers in the waters, where, in the original, the word here translated "chambers" is the plural of Alijah, and should more properly be rendered "his secret chambers": an allusion, as Dr. Clarke thinks, to the holy of holies of the tabernacle. Again, in 2 Chronicles ix. 3, 4, it is said that when the Queen of Sheba had seen the wisdom of Solomon and the house that he had built—his provisions, servants, and cup-bearers, "and his *ascent* by which he went up into the house of the Lord—there was no more spirit in her." The word which our translators have rendered "his ascent," is again this word Alijah, and the passage should be rendered "his secret chamber," or "upper room"; the one by which, through a private way, he was enabled to pass into the Temple.

On the advent of Christianity, this Jewish custom of worshiping privately in an upper room was adopted by the apostles and disciples, and the New Testament contains many instances of the practise, the word Alijah being, as I have already remarked, translated by the Greek *huperoon*, which has a similar meaning. Thus in Acts i. 13, we find the apostles praying in an upper room; and again, in the twentieth

chapter, the disciples are represented as having met at Ephesus in an upper room, where Peter preached to them. But it is unnecessary to multiply instances of this usage. The evidence is complete that the Jews, and after them the primitive Christians, performed their devotions in upper rooms. And the care with which Alijah, *huperoon*, or *upper chamber*, is always used to designate the place of devotion, abundantly indicates that any other place would have been considered improper.

Hence we may trace the practise of holding Lodges in upper rooms to this ancient custom; and that, again, has perhaps some connection with the sacred character always given by the ancients to "high places," so that it is said, in the Masonic lectures, that our ancient brethren met on high hills and low vales. The reason there assigned by implication is that the meeting may be secret; that is, the lectures place the Lodge on a high hill, a vale, or *other secret place*. And this reason is more definitely stated in the modern lectures, which say that they so met "to observe the approach of cowans and eavesdroppers, and to guard against surprise." Yet it is not improbable that the ancient symbolism of the sanctity of a high place was referred to as well as that more practical idea of secrecy and safety.

"**Upright Man and Mason,**—and given it strictly in charge ever to walk and act as such before God and Man." Admonition in the Apprentice Degree. The definition of *Man* is interwoven with the triangle or pyramid, hence true and upright. In S. P. Andrew's *Radical Etymology*, or the origin of Language and Languages, we find the following: "Throughout the Indo-European family of languages, the syllable *ma* (changeable to *me, mi, mo, mu*) means 'great,' and *na* (changeable to *ne, ni, no, nu*) means 'small,' as their primal sense. Hence mana, mena, menu, etc., mean 'great-small,' and thence 'ratio' or 'proportion,' allied with tapering, the cone, pyramid, or triangle. The Latin *men-sa* is 'a surveyor's triangular measuring-board'; me(n)ta, 'anything conical'; mon-s, 'a mountain'; men-s, 'the mind,' i. e., 'ratio'; Sanskrit, *mā;* Latin, *mensum;* Eng., *measure;* hence, Sansk., *mana, manu*, to think." (Also see *Man.*)

[C. T. McClenachan.]

Upright Posture. The upright posture of the Apprentice in the northeast corner, as a symbo of upright conduct, was introduced into the ritual by Preston, who taught in his lectures that the candidate then represented "a just and upright man and Mason." The same symbolism is referred to by Hutchinson, who says that "as the builder raises his column by the plane and perpendicular, so should the Mason carry himself towards the world." Indeed, the application of the corner-stone, or the square stone, as a symbol of uprightness of conduct, which is precisely the Masonic symbolism of the candidate in the northeast, was familiar to the ancients; for Plato says that he who valiantly sustains the shocks of adverse fortune, demeaning himself uprightly, is truly good and of a square posture.

Ur. (Hebrew, אור, *fire.*) Fire, light, or spirit.

Uriel. Hebrew, אוריאל, meaning the *fire of God*. An archangel, mentioned only in 2 Esdras. Michael Glycas, the Byzantine historian, says that his post is in the sun, and that he came down to Seth and Enoch, and instructed them in the length of the years and the variations of the seasons. The Book of Enoch describes him as the angel of thunder and lightning. In some of the Hermetic degrees of Masonry, the name, as representing the angel of fire, becomes a significant word.

Urim and Thummim. The Hebrew words אורים, *Aurim*, and תמים, *Thummim*, have been variously translated by commentators. The Septuagint translates them, "manifestation and truth"; the Vulgate, "doctrine and truth"; Aquila, "lights and perfections"; Kalisch, "perfect brilliancy"; but the most generally received interpretation is, "light and truth." What the Urim and Thummim were has also been a subject of as much doubt and difference of opinion. Suddenly introduced to notice by Moses in the command (Exod. xxviii. 30) "and thou shalt put in the breastplate of judgment the Urim and the Thummim"—as if they were already familiar to the people—we know only of them from the Scriptural account, that they were sacred lots to be worn concealed in or behind the breastplate, and to be consulted by the high priest alone, for the purpose of obtaining a revelation of the will of God in matters of great moment. Some writers have supposed that the augury consisted in a more splendid appearance of certain letters of the names of the tribes inscribed upon the stones of the breastplate; others, that it was received by voice from two small images which were placed beyond the folds of the breastplate. A variety of other conjectures have been hazarded, but as Godwyn (*Moses and Aaron*, iv., 8) observes, "he spoke best, who ingeniously confessed that he knew not what Urim and Thummim was."

The opinion now almost universally accepted is that the Jewish lawgiver borrowed this, as he did the ark, the brazen serpent, and many other of the symbols of his theocracy, from the usages so familiar to him of the Egyptian priests, with which both he and Aaron were familiar, eliminating, of course, from them their previous heathen allusion and giving to them a purer signification.

In reference to the Urim and Thummim, we know not only from the authority of ancient writers, but also from the confirmatory testimony of more recent monumental explorations, that the judges of Egypt wore golden chains around their necks, to which was suspended a small figure of *Themè*, the

Egyptian goddess of *Justice* and *Truth*. "Some of these breastplates," says Gliddon (*Anc. Egypt.*, p. 32), "are extant in European museums; others are to be seen on the monuments as containing the figures of two deities—*Ra*, the sun, and *Themè*.

These represent *Ra*, or the sun, in a double capacity, *physical* and *intellectual* light; and *Themè* in a double capacity, *justice* and *truth*."

Neither in Ancient Craft nor in Royal Arch Masonry have the Urim and Thummim been introduced; although Oliver discusses them, in his *Landmarks*, as a type of Christ, to be Masonically applied in his peculiar system of a Christian interpretation of all the Masonic symbols. But the fact that after the construction of the Temple of Solomon we hear no more of the consultation by the priests of the Urim and Thummim, which seem to have given way to the audible interpretation of the Divine will by the prophets, would necessarily disconnect them with Masonry as a symbol, to be accepted even by those who place the foundation of the Order at the Solomonic era.

Yet they have been introduced as a symbol into some of the continental high degrees. Thus, in the last degree of the Order of Brothers of Asia, the presiding officer wears the Urim and Thummim suspended from a golden chain as the jewel of his office.

Reghellini (*Esprit du dogme*, p. 60) thus gives the continental interpretation of the symbol:

"The folly of Solomon is commemorated in the instructions and ceremonies of a high degree, where the Acolyte is reminded that Solomon, becoming arrogant, was for a time abandoned by the Divinity, and as he was, although the greatest of kings, only a mortal, he was weak enough to sacrifice to idols, and thereby lost the communication which he had previously had through the Urim and Thummim.

"These two words are found in a degree of the *Maître écossais*. The Venerables of the Lodges and the Sublime Masters explain the legend to their recipients of an elevated rank, as intended to teach them that they should always be guided by reason, virtue, and honor, and never abandon themselves to an effeminate life or silly superstition."

It is, I think, undeniable that Urim and Thummim have no legitimate existence as a Masonic symbol, and that they can only be considered such by a forced and modern interpretation.

Uriot, Joseph. The author of a work entitled *Le veritable Portrait d'un Franc-Maçon*, which was published by a Lodge at Frankfort, in 1742. It may be looked upon, says Kloss, as the earliest public exposition of the true principles of Masonry which appeared in Germany. Many editions of it were published. M. Uriot also published at Stongard, in 1769, a work entitled *Lettres sur la Franche Maçonnerie;* which was, however, only an enlargement of the *Portrait*.

Urn. Among the ancients, cinerary urns were in common use to hold the ashes of the deceased after the body had been subjected to incremation, which was the usual mode of disposing of it. He who would desire to be learned upon this subject should read Sir Thomas Browne's celebrated work entitled *Hydriotaphiæ, or Urn Burial*, where everything necessary to be known on this topic may be found. In Masonry, the cinerary urn has been introduced as a modern symbol, but always as having reference to the burial of the Temple Builder. In the comparatively recent symbol of the Monument, fabricated by Cross for the degree of Master in the American Rite, the urn is introduced as if to remind the beholder that the ashes of the great artist were there deposited. Cross borrowed, it may be supposed, his idea from an older symbol in the high degrees, where, in the description of the tomb of Hiram Abif, it is said that the heart was enclosed in a golden urn, to the side of which a triangular stone was affixed, inscribed with the letters J. M. B. within a wreath of acacia, and placed on the top of an obelisk.

Uruguay. Freemasonry was introduced into the Republic of Uruguay by the Grand Orient of France, which, in 1827, chartered a Lodge called "the Children of the New World." Up to 1856, other Lodges were established by the G. Bodies of France and Brazil. In that year authority was obtained from the Supreme Council and Grand Orient of Brazil, Valley of Lavradio, to establish a governing Masonic body, and the Supreme Council and Grand Orient of Uruguay was regularly constituted at Montevideo, in the A. A. Scottish Rite.

Usages. The peculiarity of constant intercourse between the kings of Israel and Tyre pending the construction of the Holy House, has been frequently commented upon. That this was so is evident from the old sacred Scriptures, as well as from cumulative history by Josephus and others. This ancient custom of intercommunication would not be so marked, had these two kings ever met, yet during the years of construction, gifts and messages seem to have led to the more intimate custom of propounding problems and difficult questions. Hence the inducement to speculate upon whether there was any secret tie between these two kings or merely friendship and business. The customs, habits, and usages of the ancients are visible in every form and ceremony of Masonic work, as well as in the instruction, except where modern innovators have injured, while endeavoring to improve, the time-worn yet mellowed services of the Brotherhood. One of the most beautiful expressions occurring in the Catechism of Freemasonry is the answer to an interrogatory as to the position of the hand in assuming the vow of the First Degree; to wit, "In accordance

with ancient *usages* the right hand has always been deemed the seat of Fidelity." A somewhat similar expression occurs in relation to the casting off of the shoe; answer, "This was in accordance with the *usages* of the ancient Israelites; a man plucked off his shoe and gave it to his neighbor; this was testimony in Israel." The shoe was the symbol of subjection when sent by rulers to princes. (Ruth iv. 7.) It was the symbol of humiliation and surrender with Germans and Israelites. The formal divestiture was surrender of title.

Utah. Freemasonry was introduced into the Territory, October 7, 1867, by the Grand Lodge of Montana, which chartered Wasatch Lodge, No. 8. Mount Moriah Lodge, No. 70, was chartered October 21, 1868, by the Grand Lodge of Kansas, and Argenta Lodge, No. 21, by the Grand Lodge of Colorado, September 26, 1871. All of these Lodges are situated in Salt Lake City. January 16–20, 1872, the representatives of the three Lodges met at Salt Lake City and organized the Grand Lodge of Utah, O. F. Strickland being elected first Grand Master.

V

V. (Heb. ו, *vau.*) The twenty-second letter in the English alphabet; of the Hebrew, numerical value of six. Its definition, a *nail*, which in form it represents, and as a Divine name connected with it is יהוה, *Vezio, cum splendore;* the V and O in Hebrew being equal. As a Roman numeral its value is five.

Vacancies in Office. Every Masonic officer is elected and installed to hold his office for the time for which he has been elected, and until his successor shall be installed. This is in the nature of a contract between the officer and the Lodge, Chapter, or other body which has elected him, and to its terms he signifies his assent in the most solemn manner at the time of his installation. It follows from this that to resign the office would be on his part to violate his contract. Vacancies in office, therefore, can only occur by death. Even a removal from the jurisdiction, with the intention of permanent absence, will not vacate a Masonic office, because the person removing might change his intention, and return. For the reasons why neither resignation nor removal can vacate an office, see *Succession to the Chair*.

Vagao or **Bagaos.** Found in the Fourth Degree of the French Rite of Adoption.

Vale or **Valley.** The vale or valley was introduced at an early period into the symbolism of Masonry. A catechism of the beginning of the last century says that "the Lodge stands upon holy ground, or the highest hill or lowest vale, or in the vale of Jehoshaphat, or any other secret place." And Browne, who in the beginning of the present century gave a correct version of the Prestonian lectures, says that "our ancient brethren met on the highest hills, the lowest dales, even in the valley of Jehoshaphat, or some such secret place."

Hutchinson (*Sp. of Mas.*, p. 94) has dilated on this subject, but with a mistaken view of the true import of the symbol. He says: "We place the spiritual Lodge in the vale of Jehoshaphat, implying thereby that the principles of Masonry are derived from the knowledge of God, and are established in the judgment of the Lord." And he adds: "The highest hills and lowest valleys were from the earliest times esteemed sacred, and it was supposed the spirit of God was peculiarly diffusive in those places."

It is true that worship in high places was an ancient idolatrous usage. But there is no evidence that the superstition extended to valleys. Hutchinson's subsequent reference to the Druidical and Oriental worship in groves has no bearing on the subject, for groves are not necessarily valleys. The particular reference to the valley of Jehoshaphat would seem in that case to carry an allusion to the peculiar sanctity of that spot, as meaning, in the original, the valley of the judgment of God. But the fact is that the old Masons did not derive their idea that the Lodge was situated in a valley from any idolatrous practise of the ancients.

Valley, in Masonry, is a symbol of secrecy. And although I am not disposed to believe that the use of the word in this sense was borrowed from any meaning which it had in Hebrew, yet it is a singular coincidence that the Hebrew word for valley, *gnemeth*, signifies also "deep," or, as Bate (*Critica Hebræa*) defines it, "whatever lies remote from sight, as counsels and designs which are deep or close." This very word is used in Job xii. 22, where it is said that God "discovereth *deep things* out of darkness, and bringeth out to light the shadow of death."

The Lodge, therefore, is said to be placed in a valley because, the valley being the symbol of secrecy, it is intended to indicate the secrecy in which the acts of the Lodge should be concealed. And this interpretation agrees precisely with what is said in the passages already cited, where the Lodge is said to stand in the lowest vale "or any secret place." It is supported also by the present lecture in this country, the ideas of

which at least Webb derived from Preston. It is there taught that our ancient brethren met on the highest hills and lowest vales, *the better to observe the approach of cowans and eavesdroppers, and to guard against surprise.*

Valhalla. The North German or Scandinavian hall of the gods.

Valley. In the capitular degrees of the French Rite, this word is used instead of Orient, to designate the seat of the Chapter. Thus on such a body a document would be dated from the "Valley of Paris," instead of the "Orient of Paris." The word, says the *Dictionnaire Maçonnique*, is often incorrectly employed to designate the south and north sides of the Lodge, where the expression should be "the column of the south" and "the column of the north." Thus, a Warden will address the *brethren of his valley*, instead of the *brethren of his column*. The valley includes the whole Lodge or Chapter; the columns are its divisions.

Van Rensselaer, Killian Henry. Born 1799, died January 28, 1881. A native of Albany, N. Y. State, and descendant of the well-known old Knickerbocker family, whose name he bore. He had held various positions in Craft Masonry, but in 1824 he became prominent in the A. A. Scottish Rite, to which he devoted himself for the remainder of his life, becoming an Inspector-General on June 17, 1845. Bro. Van Rensselaer commanded the Supreme Council that rebelled against the ruling of Edward A. Raymond, and thus was formed another Supreme Body in the Northern States, whose difficulties were finally overcome, as were all schisms of every nature of the Scottish Rite, on the 17th of May, 1867. "Bro. Van," as he was familiarly termed, resided during the last thirty years of his life in the West, and died in California, an outlying suburb of Cincinnati, Ohio. One more sincerely devoted to the cause of Masonry, and without a day of relenting earnestness, will not in time be found.

Vassal, Pierre Gerard. A French physician and Masonic writer, who was born at Manosques, in France, October 14, 1769. He was intended by his parents for the Church, and entered the Seminary of Marseilles for the purpose of pursuing his ecclesiastical studies. At the commencement of the revolution he left the school and joined the army, where, however, he remained only eighteen months. He then applied himself to the study of medicine, and pursued the practise of the profession during the rest of his life, acquiring an extensive reputation as a physician. He was elected a member of several medical societies, to whose transactions he contributed several valuable essays. He is said to have introduced to the profession the use of the digitalis purpurea as a remedial agent, especially in diseases of the heart. He was initiated into Masonry about the year 1811, and thenceforth took an active part in the Institution. He presided in the Lodge, Chapter, and Areopagus of the Sept Ecossais réunis with great zeal and devotion; was in 1819 elected Secretary-General of the Grand Orient, and in 1827 President of the College of Rites. He attained the Thirty-third Degree of the Ancient and Accepted Rite, and was a warm advocate of Scottish Masonry. But his zeal was tempered by his judgment, and he did not hesitate to denounce the errors that had crept into the system, an impartiality of criticism which greatly surprised Ragon. His principal Masonic works are *Essai historique sur l'institution du Rit Ecossais, etc.*, Paris, 1827, and a valuable historical contribution to Masonry entitled *Cours complet de la Maçonnerie, ou Histoire générale de l'Initiation depuis son Origine jusqu'à son institution en France*, Paris, 1832. In private life, Vassal was distinguished for his kind heart and benevolent disposition. The Lodge of Sept Ecossais réunis presented him a medal in 1830 as a recognition of his active labors in Masonry. He died May 4, 1840, at Paris.

Vault of Steel. (*Voute d'acier.*) The French Masons so call the *Arch of Steel*, which see.

Vault, Secret. As a symbol, the Secret Vault does not present itself in the primary degrees of Masonry. It is found only in the high degrees, such as the Royal Arch of all the Rites, where it plays an important part. Dr. Oliver, in his *Historical Landmarks* (vol. ii., p. 434), gives, while referring to the building of the second Temple, the following general detail of the Masonic legend of this vault:

"The foundations of the Temple were opened, and cleared from the accumulation of rubbish, that a level might be procured for the commencement of the building. While engaged in excavations for this purpose, three fortunate sojourners are said to have discovered our ancient stone of foundation, which had been deposited in the secret crypt by Wisdom, Strength, and Beauty, to prevent the communication of ineffable secrets to profane or unworthy persons. The discovery having been communicated to the prince, prophet, and priest of the Jews, the stone was adopted as the chief corner-stone of the re-edified building, and thus became, in a new and more expressive sense, the type of a more excellent dispensation. An avenue was also accidentally discovered, supported by seven pairs of pillars, perfect and entire, which, from their situation, had escaped the fury of the flames that had consumed the Temple, and the desolation of war that had destroyed the city. The secret vault, which had been built by Solomon as a secure depository for certain secrets that would inevitably have been lost without some such expedient for their preservation, communicated by a subterranean avenue with the king's palace; but at the destruction of Jerusalem the entrance having been closed by the rubbish of falling buildings, it had been discovered by the appearance of a keystone amongst the foundations of the sanctum sanctorum.

A careful inspection was then made, and the invaluable secrets were placed in safe custody."

To support this legend, there is no historical evidence and no authority except that of the Talmudic writers. It is clearly a mythical symbol, and as such we must accept it. We cannot altogether reject it, because it is so intimately and so extensively connected with the symbolism of the Lost and the Recovered Word, that if we reject the theory of the Secret Vault, we must abandon all of that symbolism, and with it the whole of the science of Masonic symbolism. Fortunately, there is ample evidence in the present appearance of Jerusalem and its subterranean topography, to remove from any tacit and, as it were, conventional assent to the theory, features of absurdity or impossibility.

Considered simply as an historical question, there can be no doubt of the existence of immense vaults beneath the superstructure of the original Temple of Solomon. Prime, Robison, and other writers who in recent times have described the topography of Jerusalem, speak of the existence of these structures, which they visited and, in some instances, carefully examined.

After the destruction of Jerusalem by Titus, the Roman Emperor Hadrian erected on the site of the "House of the Lord" a temple of Venus, which in its turn was destroyed, and the place subsequently became a depository of all manner of filth. But the Calif Omar, after his conquest of Jerusalem, sought out the ancient site, and, having caused it to be cleansed of its impurities, he directed a mosque to be erected on the rock which rises in the center of the mountain. Fifty years afterward the Sultan Abd-el-Meluk displaced the edifice of Omar, and erected that splendid building which remains to this day, and is still incorrectly called by Christians the mosque of Omar, but known to Mussulmans as El-kubbet-es-Sukrah, or the Dome of the Rock. This is supposed to occupy the exact site of the original Solomonic Temple, and is viewed with equal reverence by Jews and Mohammedans, the former of whom, says Mr. Prime (*Tent Life in the Holy Land*, p. 183), "have a faith that the ark is within its bosom now."

Bartlett (*Walks about Jerusalem*, p. 170), in describing a vault beneath this mosque of Omar, says: "Beneath the dome, at the southeast angle of the Temple wall, conspicuous from all points, is a small subterraneous place of prayer, forming the entrance to the extensive vaults which support the level platform of the mosque above."

Dr. Barclay (*City of the Great King*) describes, in many places of his interesting topography of Jerusalem, the vaults and subterranean chambers which are to be found beneath the site of the old Temple.

Conformable with this historical account is the Talmudical legend, in which the Jewish Rabbis state that, in preparing the foundations of the Temple, the workmen discovered a subterranean vault sustained by seven arches, rising from as many pairs of pillars. This vault escaped notice at the destruction of Jerusalem, in consequence of its being filled with rubbish. The legend adds that Josiah, foreseeing the destruction of the Temple, commanded the Levites to deposit the Ark of the Covenant in this vault, where it was found by some of the workmen of Zerubbabel at the building of the second Temple.

In the earliest ages, the cave or vault was deemed sacred. The first worship was in cave temples, which were either natural or formed by art to resemble the excavations of nature. Of such great extent was this practise of subterranean worship by the nations of antiquity, that many of the forms of heathen temples, as well as the naves, aisles, and chancels of churches subsequently built for Christian worship, are said to owe their origin to the religious use of caves.

From this, too, arose the fact, that the initiation into the ancient mysteries was almost always performed in subterranean edifices; and when the place of initiation, as in some of the Egyptian temples, was really above ground, it was so constructed as to give to the neophyte the appearance, in its approaches and its internal structure, of a vault. As the great doctrine taught in the mysteries was the resurrection from the dead—as *to die* and *to be initiated* were synonymous terms—it was deemed proper that there should be some formal resemblance between a descent into the grave and a descent into the place of initiation. "Happy is the man," says the Greek poet Pindar, "who descends beneath the hollow earth having beheld these mysteries, for he knows the end as well as the divine origin of life"; and in a like spirit Sophocles exclaims, "Thrice happy are they who descend to the shades below after having beheld the sacred rites, for they alone have life in Hades, while all others suffer there every kind of evil."

The vault was, therefore, in the ancient mysteries, symbolic of the grave; for initiation was symbolic of death, where alone Divine Truth is to be found. The Masons have adopted the same idea. They teach that death is but the beginning of life; that if the first or evanescent temple of our transitory life be on the surface, we must descend into the *secret vault* of death before we can find that sacred deposit of truth which is to adorn our second temple of eternal life. It is in this sense of an entrance through the grave into eternal life that we are to view the symbolism of the secret vault. Like every other myth and allegory of Masonry, the historical relation may be true or it may be false; it may be founded on fact or be the invention of imagination; the lesson is still there, and the symbolism teaches it exclusive of the history.

V. D. S. A. (*Veut Dieu Saint Amour.*) Four words supposed to be repeated by the fraters of the Temple during certain pauses in the ceremonies. P. D. E. P. refers to the motto "Pro Deo et Patria."

Veadar. (ואדר.) That is, the second **Adar**. A month intercalated by the Jews every few years between Adar and Nisan, so as to reconcile the computation by solar and lunar time. It commences sometimes in February and sometimes in March.

Vedanga. ("Limb of the Veda.") A collection of Sanskrit works on the grammar, lexicography, chronology, and ritual of the Vedic text. They are older than the Upanishads, and are placed among the Great Shasters, though not among the Sruti.

Vedas. The most ancient of the religious writings of the Indian Aryans, and now constituting the sacred canon of the Hindus, being to them what the Bible is to the Christians, or the Koran to the Mohammedans. The word Veda denotes in Sanskrit, the language in which these books are written, wisdom or knowledge, and comes from the verb *Veda*, which, like the Greek οἶδα, signifies "I know." The German *weiss* and the English *wit* came from the same root. There are four collections, each of which is called a Veda, namely, the Rig-Veda, the Yazur-Veda, the Sama-Veda, and the Atharva-Veda; but the first only is the real Veda, the others being but commentaries on it, as the Talmud is upon the Old Testament.

The Rig-Veda is divided into two parts: the *Mantras* or hymns, which are all metrical, and the *Brahmanes*, which are in prose, and consist of ritualistic directions concerning the employment of the hymns, and the method of sacrifice. The other Vedas consist also of hymns and prayers; but they are borrowed, for the most part, from the Rig-Veda.

The Vedas, then, are the Hindu canon of Scripture—his book of the law; and to the Hindu Mason they are his trestle-board, just as the Bible is to the Christian Mason.

The religion of the Vedas is apparently an adoration of the visible powers of nature, such as the sun, the sky, the dawn, and the fire, and, in general, the eternal powers of light. The supreme divinity was the sky, called *Varuna*, whence the Greeks got their *Ouranas;* and next was the sun, called sometimes *Savitar*, the progenitor, and sometimes *Mitra*, the loving one, whence the Persian *Mithras*. Side by side with these was *Agni*, fire, whence the Latin *ignis*, who was the divinity coming most directly in approximation with man on earth, and soaring upward as the flame to the heavenly gods. But in this nature-worship the Vedas frequently betray an inward spirit groping after the infinite and the eternal, and an anxious search for the Divine name, which was to be reverenced just as the Hebrew aspired after the unutterable Tetragrammaton. Bunsen (*God in History*, b. iii., ch. 7) calls this "the desire—the yearning after the nameless Deity, who nowhere manifests himself in the Indian pantheon of the Vedas—the voice of humanity groping after God." One of the most sublime of the Veda hymns (*Rig-Veda, b. x. hymn* 121) ends each strophe with the solemn question: "Who is the god to whom we shall offer our sacrifice?" This is the question which every religion asks; the search after the All-Father is the labor of all men who are seeking Divine truth and light. The Semitic, like the Aryan poet in the same longing spirit for the knowledge of God, exclaims, "Oh that I knew where I might find him, that I might come even to his seat." It is the great object of all Masonic labor, which thus shows its true religious character and design.

The Vedas have not exercised any direct influence on the symbolism of Freemasonry. But, as the oldest Aryan faith, they became infused into the subsequent religious systems of the race, and through the Zend-Avesta of the Zoroastrians, the mysteries of Mithras, the doctrines of the Neo-platonists, and the school of Pythagoras, mixed with the Semitic doctrines of the Bible and the Talmud, they have cropped out in the mysticism of the Gnostics and the secret societies of the Middle Ages, and have shown some of their spirit in the religious philosophy and the symbolism of Speculative Masonry. To the Masonic scholar, the study of the Vedic hymns is therefore interesting, and not altogether fruitless in its results. The writings of Bunsen, of Muir, of Cox, and especially of Max Müller, will furnish ample materials for the study.

Vehm-gericht. See *Westphalia, Secret Tribunals of.*

Veils, Grand Masters of the. Three officers in a Royal Arch Chapter of the American Rite, whose duty it is to protect and defend the Veils of the Tabernacle, for which purpose they are presented with a sword. The jewel of their office is a sword within a triangle, and they bear each a banner, which is respectively blue, purple, and scarlet. The title of "Grand Master" appears to be a misnomer. It would have been better to have styled them "Masters" or "Guardians." In the English system, the three Sojourners act in this capacity, which is an absurd violation of all the facts of history, and completely changes the symbolism.

Veils, Symbolism of the. Neither the construction nor the symbolism of the veils in the Royal Arch tabernacle is derived from that of the Sinaitic. In the Sinaitic tabernacle there were no veils of separation between the different parts, except the one white one that hung before the most holy place. The decorations of the tabernacle were curtains, like modern tapestry, interwoven with many colors; no curtain being wholly of one color, and not running across the apartment, but covering its sides and roof. The exterior form of the Royal Arch tabernacle was taken from that of Moses, but the interior decoration from a passage of Josephus not properly understood.

Josephus has been greatly used by the fabricators of high degrees of Masonry, not only for their ideas of symbolism, but for the suggestion of their legends. In the Second Book of Chronicles (iii. 14) it is said that Solomon "made the veil of blue, and purple, and crimson, and fine linen, and wrought cherubims thereon." This description evidently alludes to the single veil, which, like that of the Sinaitic tabernacle, was placed before the entrance of the holy of holies. It by no means resembles the four separate and equidistant veils of the Masonic tabernacle.

But Josephus had said (*Antiq.*, l. viii., c. iii., § 3) that the king "also had veils of blue, and purple, and scarlet, and the brightest and softest linen, with the most curious flowers wrought upon them, which were to be drawn before these doors." To this description—which is a very inaccurate one, which refers, too, to the interior of the first Temple, and not to the supposed tabernacle subsequently erected near its ruins, and which, besides, has no Biblical authority for its support—we must trace the ideas, even as to the order of the veils, which the inventors of the Masonic tabernacle adopted in their construction of it. That tabernacle cannot be recognized as historically correct, but must be considered, like the three doors of the Temple in the Symbolic degrees, simply as a symbol. But this does not at all diminish its value.

The symbolism of the veils must be considered in two aspects: first, in reference to the symbolism of the veils as a whole, and next, as to the symbolism of each veil separately.

As a whole, the four veils, constituting four divisions of the tabernacle, present obstacles to the neophyte in his advance to the most holy place where the Grand Council sits. Now he is seeking to advance to that sacred spot that he may there receive his spiritual illumination, and be invested with a knowledge of the true Divine name. But Masonically, this Divine name is itself but a symbol of Truth, the object, as has been often said, of all a Mason's search and labor. The passage through the veils is, therefore, a symbol of the trials and difficulties that are encountered and must be overcome in the search for and the acquisition of Truth.

This is the general symbolism; but we lose sight of it, in a great degree, when we come to the interpretation of the symbolism of each veil independently of the others, for this principally symbolizes the various virtues and affections that should characterize the Mason. Yet the two symbolisms are really connected, for the virtues symbolized are those which should distinguish everyone engaged in the Divine search.

The symbolism, according to the system adopted in the American Rite, refers to the colors of the veils and to the miraculous signs of Moses, which are described in Exodus as having been shown by him to prove his mission as the messenger of Jehovah.

Blue is a symbol of universal friendship and benevolence. It is the appropriate color of the Symbolic degrees, the possession of which is the first step in the progress of the search for truth to be now instituted. The Mosaic sign of the serpent was the symbol among the ancients of resurrection to life, because the serpent, by casting his skin, is supposed continually to renew his youth. It is the symbol here of the loss and the recovery of the Word.

Purple is a symbol here of union, and refers to the intimate connection of Ancient Craft and Royal Arch Masonry. Hence it is the appropriate color of the intermediate degrees, which must be passed through in the prosecution of the search. The Mosaic sign refers to the restoration of the leprous hand to health. Here again, in this representation of a diseased limb restored to health, we have a repetition of the allusion to the loss and the recovery of the Word; the Word itself being but a symbol of Divine truth, the search for which constitutes the whole science of Freemasonry, and the symbolism of which pervades the whole system of initiation from the first to the last degree.

Scarlet is a symbol of fervency and zeal, and is appropriated to the Royal Arch Degree because it is by these qualities that the neophyte, now so far advanced in his progress, must expect to be successful in his search. The Mosaic sign of changing water into blood bears the same symbolic reference to a change for the better—from a lower to a higher state—from the elemental water in which there is no life to the blood which is the life itself—from darkness to light. The progress is still onward to the recovery of that which had been lost, but which is yet to be found.

White is a symbol of purity, and is peculiarly appropriate to remind the neophyte, who is now almost at the close of his search, that it is only by purity of life that he can expect to be found worthy of the reception of Divine truth. "Blessed," says the Great Teacher, "are the pure in heart, for they shall see God." The Mosaic signs now cease, for they have taught their lesson; and the aspirant is invested with the Signet of Truth, to assure him that, having endured all trials and overcome all obstacles, he is at length entitled to receive the reward for which he has been seeking; for the Signet of Zerubbabel is a royal signet, which confers power and authority on him who possesses it.

And so we now see that the Symbolism of the Veils, however viewed, whether collectively or separately, represents the laborious, but at last successful, search for Divine truth.

Venerable. The title of a Worshipful Master in a French Lodge.

Venerable Grand Master of all Symbolic Lodges. The Twentieth Degree of the Ancient and Accepted Scottish Rite. (See *Grand Master of all Symbolic Lodges.*) The *Dictionnaire Maçonnique* says that this degree was formerly conferred on those brethren in France who, in receiving it, obtained the right to organize Lodges, and to act as Masters or Venerables for life, an abuse that was subsequently abolished by the Grand Orient.

Ragon and Vassal both make the same statement. It may be true, but they furnish no documentary evidence of the fact.

Venerable, Perfect. (*Venerable Parfait.*) A degree in the collection of Viany.

Venezuela. Freemasonry first penetrated into Venezuela in the beginning of the present century, when a Lodge was instituted by the Grand Orient of Spain. Several other Lodges were subsequently established by the same authority. In 1825, Cerneau, the head of the irregular Supreme Council at New York, established in Caracas a Grand Lodge and Supreme Council of the Scottish Rite. In 1827, the Liberator, Simon Bolivar, having by his decree prohibited all secret societies, the Masonic Lodges, with the exception of the one at Porto Cabello, suspended their labors. In 1830, Venezuela having become independent by the division of the Colombian Republic, several brethren obtained from some of the dignitaries of the extinct Grand Lodge, in their capacity as Sovereign Inspectors-General of the Thirty-third Degree, a temporary Dispensation to hold a Lodge for one year, in the expectation that they would, in the course of that time, be enabled to obtain a Charter from some foreign Grand Lodge. But their efforts, in consequence of irregularities, were unsuccessful, and the Lodge was suspended. For eight years, Freemasonry in Venezuela was in a dormant condition. But in 1838 the Masonic spirit was revived, the Lodge just referred to renewed its labors, the old Lodges were resuscitated, and the National Grand Lodge of Venezuela was constituted, whether regularly or not, it is impossible at this time, with the insufficient light before us, to determine. It was, however, recognized by several foreign bodies. The Grand Lodge thus established, issued Charters to all the old Lodges, and erected new ones. In conjunction with the Inspectors-General, it established a supreme legislative body, under the name of the Grand Orient, and also constituted a Grand Lodge, which continued to exist, with only a few changes, made in 1852, until the present Grand Lodge and Supreme Council were established, January 12, 1865. There are at present in Venezuela a Grand Lodge, which now has thirty-five Lodges under its obedience, and a Supreme Council of the Scottish Rite.

Vengeance. A word used in the high degrees. Barruel, Robison, and the other detractors of Freemasonry, have sought to find in this word a proof of the vindictive character of the Institution. "In the degree of Kadosh," says Barruel (*Memoires*, ii., 310), "the assassin of Adoniram becomes the king, who must be slain to avenge the Grand Master Molay and the Order of Masons, who are the successors of the Templars."

No calumny was ever fabricated with so little pretension to truth for its foundation. The reference is altogether historical; it is the record of the punishment which followed a crime, not an incentive to revenge.

The word *nekam* is used in Masonry in precisely the same sense in which it is employed by the prophet Jeremiah (50. 15) when he speaks of *nikemat Jehovah*, "the vengeance of the Lord"—the punishment which God will inflict on evil-doers. The word is used symbolically to express the universally recognized doctrine that crime will inevitably be followed by its penal consequences. It is the dogma of all true religions; for if virtue and vice entailed the same result, there would be no incentive to the one and no restraint from the other.

Verger. An officer in a Council of Knights of the Holy Sepulcher, whose duties are similar to those of a Senior Deacon in a Symbolic Lodge.

Veritas. Signifying "truth," a significant word in Templar Masonry. (See *Truth.*)

Vermont. Freemasonry was introduced into the State of Vermont in 1781, in which year the Grand Lodge of Massachusetts granted a Charter for the establishment of a Lodge at Cornish. This town having soon afterward been claimed by New Hampshire, the Lodge removed to Windsor, on the opposite side of the river. In 1785, the Grand Lodge of Massachusetts chartered another Lodge at the town of Manchester. A Grand Lodge was organized October 13, 1794, at Manchester, by a convention of the five Lodges then existing in the State.

In no State of the Union did the anti-Masonic party, as a political power, exercise so much influence as it did in Vermont. The Grand Lodge was, under the pressure of persecution, compelled to suspend its labors in 1833. All the Lodges under its jurisdiction surrendered their Charters, and Masonry for fifteen years had no active existence in that State. The Grand Lodge, however, did not dissolve, but continued its legal life by regular, although private, communications of the officers, and by adjournments, until the year 1846, when it resumed vigor, Bro. Nathan B. Haswell, who was the Grand Master at the time of the suspension, having taken the chair at the resumed communication in January, 1846. The regularity of this resumption, although at first denied by the Grand Lodge of New York, was generally admitted by all the Grand Lodges of the United States, with a welcome to which the devotion and steady perseverance of the Masons of Vermont had justly entitled them.

The Grand Chapter was organized December 20, 1804, Jonathan Wells being elected first Grand High Priest. It shared the destinies of the Grand Lodge during the period of persecution, but was reorganized July 18, 1849, under a commission from Joseph K. Stapleton, Deputy General Grand High Priest of the United States.

The Grand Council of Royal and Select Masters was organized August 19, 1854, by a Convention of four Councils held at Vergennes, and Nathan B. Haswell was elected Grand Master.

The Grand Encampment (now the Grand Commandery) was originally organized in

1825. It subsequently became dormant. In 1850, the Grand Encampment was revived; but it appearing that the revival was attended by irregularities, and in violation of the Grand Constitution of the Grand Encampment of the United States, the members dissolved the body, and the Deputy Grand Master, William H. Ellis, having, in December, 1850, issued a commission to three subordinate Encampments to organize a Grand Encampment, that body was formed January 14, 1852.

Vernhes, J. F. A French litterateur and Masonic writer, who was in 1821 the Venerable of the Lodge la Parfaite Humanité at Montpellier. He wrote an *Essai sur l'Histoire de la Franch-Maçonnerie, depuis son établissement jusq'à nos jours*, Paris, 1813; and *Le Parfait Maçon ou Repertoire complet de la Maçonnerie Symbolique*. This work was published at Montpellier, in 1820, in six numbers, of which the sixth was republished the next year, with the title of *Apologie des Maçons*. It contained a calm and rational refutation of several works which had been written against Freemasonry. Vernhes became an active disciple of the Rite of Mizraim, and published in 1822, at Paris, a defense of it and an examination of the various Rites then practised in France.

Vertot d'Aubœuf, René-Aubert de. The Abbé Vertot was born at the Chateau de Bennelot, in Normandy, in 1665. In 1715 the Grand Master of the Knights of Malta appointed him the historiographer of that Order, and provided him with the Commandery of Santenay. Vertot discharged the duties of his office by writing his well-known work entitled *History of the Knights Hospitalers of St. John of Jerusalem, afterwards Knights of Rhodes, and now Knights of Malta*, which was published at Paris, in 1726, in four volumes. It has since passed through a great number of editions, and been translated into many languages. Of this work, to which the Abbé principally owes his fame, although he was also the author of many other histories, French critics complain that the style is languishing, and less pure and natural than that of his other writings. Notwithstanding that it has been the basis of almost all subsequent histories of the Order, the judgment of the literary world is, that it needs exactitude in many of its details, and is too much influenced by the personal prejudices of the author. The Abbé Vertot died in 1735.

Vesica Piscis. The fish was among primitive Christians a symbol of Jesus. (See *Fish.*) The *vesica piscis*, signifying literally the air-bladder of a fish, but, as some suppose, being the rough outline of a fish, was adopted as an abbreviated form of that symbol. In some old manuscripts it is used as a representation of the lateral wound of our Lord. As a symbol, it was frequently employed as a church decoration by the Freemasons of the Middle Ages. The seals of all colleges, abbeys, and other religious communities, as well as of ecclesiastical persons, were invariably made of this shape. Hence, in reference to the religious character of the Institution, it has been suggested that the seals of Masonic Lodges should also have that form, instead of the circular one now used.

Vessels of Gold and Silver, for the service of the First Temple, were almost numberless, acording to Josephus; thus:

	Gold.	Silver.
Vessels of gold	20,000	40,000
Candlesticks	4,000	8,000
Wine cups	80,000	.....
Goblets	10,000	20,000
Measures	20,000	40,000
Dishes	80,000	160,000
Censers	20,000	50,000
	234,000	318,000
Vestments for the priests		21,000
Musical instruments		600,000
Stoles of silver for the Levites		200,000

The vessels and vestments were always protected by a hierophylax or guardian.

Veterans. Associations of Masons "who, as such, have borne the burden and heat of the day" for at least 21 years' active service —in the State of Connecticut, 30 years. A number of these societies exist in the United States, their objects being largely of a social nature, to set an example to the younger Masons, and to keep a watchful eye on the comfort of those whose years are becoming numbered. The assemblies are stated or casual, but in all cases annual for a Table Lodge. These associations perpetuate friendship, cultivate the social virtues, and collate and preserve the history and biography of their members.

Vexillum Belli. A war-flag. In classical Latin, *Vexillum* meant a flag consisting of a piece of cloth fixed on a frame or cross-tree, as contradistinguished from a *signum*, or standard, which was simply a pole with the image of an eagle, horse, or some other device on the top.

Among the pretended relics of the Order of the Temple is one called "le drapeau de guerre, eu laine blanche, à quatre raies noires"; i. e., the standard of war, of white linen, with four black rays; and in the statutes of the Order, the Vexillum Belli is described as being "albo nigroque palatum," or pales of white and black, which is the same thing couched in the technical language of heraldry. This is incorrect. The only war-flag of the ancient Knights Templar was the Beauseant. Addison, on the title-page of his *Temple Church*, gives what he calls "the war-banner of the Order

of the Temple," and which is, as in the margin, the Beauseant, bearing in the center the blood-red Templar cross. Some of the Masonic Templars, those of Scotland, for example, have both a Beaucenifer or Beauseant bearer, and a bearer of the Vexillum Belli. The difference would appear to be that the Beauseant is the plain white and black flag, and the Vexillum Belli is the same flag charged with the red cross.

Viany, Auguste de. A Masonic writer of Tuscany, and one of the founders there of the Philosophic Scottish Rite. He was the author of many discourses, dissertations, and didactic essays on Masonic subjects. He is, however, best known as the collector of a large number of manuscript degrees and cahiers or rituals, several of which have been referred to in this work.

Viceroy Eusebius. The name of the second officer in the Conclave of the Red Cross of Rome and Constantine.

Vielle-Bru, Rite of. In 1748, the year after the alleged creation of the Chapter of Arras by the Young Pretender, Charles Edward, a new Rite, in favor of the cause of the Stuarts, was established at Toulouse by, as it is said, Sir Samuel Lockhart, one of the aides-de-camp of the Prince. It was called the Rite of Vielle-Bru, or Faithful Scottish Masons. It consisted of nine degrees, divided into three chapters as follows: *First Chapter*, 1, 2, 3. The Symbolic degrees; 4. Secret Master. *Second Chapter*, 5, 6, 7, 8. Four *élu* degrees, based on the Templar system. *Third Chapter*, 9. Scientific Masonry. The head of the Rite was a Council of Menatzchim. In 1804 the Rite was refused a recognition by the Grand Orient of France, because it presented no moral or scientific object, and because the Charter which it claimed to have from Prince Charles Edward was not proved to be authentic. It continued to exist in the south of France until the year 1812, when, being again rejected by the Grand Orient, it fell into decay.

Villars, Abbé Montfauçon de. He was born in Languedoc in 1653, and was shot by one of his relatives, on the high road between Lyons and Paris, in 1675. The Abbé Villars is celebrated as the author of *The Count de Gabalis, or Conversations on the Secret Sciences*, published in 2 vols., at Paris, in 1670. In this work the author's design was, under the form of a romance, to unveil some of the Kabbalistic mysteries of Rosicrucianism. It has passed through many editions, and has been translated into English as well as into other languages.

Vincere aut Mori. French, *Vaincre ou Mourir*, to conquer or to die. The motto of the degree of Perfect Elect Mason, the first of the *élus* according to the Clermont or Templar system of Masonry.

Vinton, David. A distinguished lecturer on Masonry, and teacher of the ritual in the first quarter of the present century. His field of labors was principally confined to the Southern States, and he taught his system for some time with great success in North and South Carolina. There were, however, stains upon his character, and he was eventually expelled by the Grand Lodge of the former State. He died at Shakertown, Kentucky, in July, 1833. Vinton published at Dedham, Massachusetts, in 1816, a volume, containing Selections of Masonic, Sentimental, and Humorous songs, under the title of *The Masonic Minstrel*. Of this rather trifling work no less than twelve thousand copies were sold by subscription. To Vinton's poetic genius we are indebted for that beautiful dirge commencing, "Solemn strikes the funeral chime," which has now become in almost all the Lodges of the United States a part of the ritualistic ceremonies of the Third Degree, and has been sung over the graves of thousands of departed brethren. This contribution should preserve the memory of Vinton among the Craft, and in some measure atone for his faults, whatever they may have been.

Violet. This is not a Masonic color, except in some of the high degrees of the Scottish Rite, where it is a symbol of mourning, and thus becomes one of the decorations of a Sorrow Lodge. Portal (*Coleurs Symboliques*, p. 236) says that this color was adopted for mourning by persons of high rank. And Campini (*Vetera Monumenta*) states that violet was the mark of grief, especially among kings and cardinals. In Christian art, the Savior is clothed in a purple robe during his passion; and it is the color appropriated, says Court de Gebelin (*Monde prim.*, viii., 201), to martyrs, because, like their Divine Master, they undergo the punishment of the passion. Prevost (*Hist. des Voyages*, vi., 152) says that in China violet is the color of mourning. Among that people blue is appropriated to the dead and red to the living, because with them red represents the vital heat, and blue, immortality; and hence, says Portal, violet, which is made by an equal admixture of blue and red, is a symbol of the resurrection to eternal life. Such an idea is peculiarly appropriate to the use of violet in the high degrees of Masonry as a symbol of mourning. It would be equally appropriate in the primary degrees, for everywhere in Masonry we are taught to mourn not as those who have no hope. Our grief for the dead is that of those who believe in the immortal life. The red symbol of life is tinged with the blue of immortality, and thus we would wear the violet as our mourning to declare our trust in the resurrection.

Virginia. There is much obscurity about the early history of Freemasonry in this State. The first chartered Lodge appears to have been the "St. John's Lodge" at Norfolk, which received its Warrant in 1741 from the Grand Lodge of Scotland. December 22, 1753, the "Royal Exchange Lodge" at Norfolk was chartered by the Atholl or Ancient York Lodge. But between 1741 and 1758 the Lodge of Fredericksburg had sprung into existence, for its records show that General Washington was there initiated

November 4, 1752. This Lodge was chartered by the Grand Lodge of Massachusetts on July 21, 1758, but had been acting under Dispensation for several years before. In 1777 there were ten Lodges in Virginia, namely, two at Norfolk and one at each of the following places: Port Royal, Fredericksburg, Hampton, Williamsburg, Gloucester, Cabin Point, Petersburg and Yorktown. On the 6th of May in that year, deputies from five of these Lodges met in convention at Williamsburg, "for the purpose of choosing a Grand Master for Virginia." So says the record as contained in Dove's *Text-Book*. The convention, however, adjourned to June 23d, after stating its reasons for the election of such an officer. On that day it met, but again adjourned. Finally, it met on October 13, 1778. The record calls it "a Convention of the Craft"; but it assumed the form of a Lodge, and the Master and Wardens of Williamsburg Lodge presided. Only four Lodges were represented, namely, Williamsburg, Blandford, Botetourt, and Cabin Point. The modern forms of Masonic conventions are not found in the proceedings of this convention. Nothing is said of the formation of a Grand Lodge, but the following resolution was adopted:

"It is the opinion of this Convention, that it is agreeable to the Constitutions of Masonry that all the regular chartered Lodges within this State should be subject to the Grand Master of the said State."

Accordingly, John Blair, Past Master of the Williamsburg Lodge, was nominated and unanimously elected, and on the same day he was installed, by the Master of Williamsburg Lodge, as "Grand Master of Free and Accepted Masons of the State of Virginia." All this was done, if we may trust the record, in Williamsburg Lodge, the Master thereof presiding, who afterward closed the Lodge without any reference to the organization of a Grand Lodge. We may, however, imply that such a body was then formed, for Dove—without, however, giving any account of the proceedings in the interval, when there might or might not have been quarterly or annual communications—says that a Grand Lodge was held in the city of Richmond, October 4, 1784, when Grand Master Blair having resigned the chair, James Mercer was elected Grand Master. Dove dates the organization of the Grand Lodge October 13, 1778.

Royal Arch Masonry was introduced into Virginia, it is said, by Joseph Myers, who was acting under his authority as a Deputy Inspector of the Scottish Rite. The Grand Chapter was organized at Norfolk, May 1, 1808. It has never recognized the authority of the General Grand Chapter.

The Cryptic degrees are conferred in Virginia in the Chapters preparatory to the Royal Arch. There are therefore no Councils of Royal and Select Masters in the State.

The register, or roll published in the *Proceedings of the Grand Encampment of the United States* for 1871 (p. 27), states that the Grand Commandery of Virginia was organized November 27, 1823. But from a report of the committee of the Grand Encampment, made September 17, 1847, we learn the following facts. In 1824 there existed three subordinate Encampments in Virginia, which about the year 1826 formed a Grand Encampment, that was represented that year in the General Grand Encampment. It is supposed that this body ceased to exist soon after its organization, and a Charter was granted, by the General Grand Encampment, for an Encampment to meet at Wheeling. On December 11, 1845, delegates from various Encampments in Virginia met at Richmond and organized a new Grand Encampment which they declared to be independent of the General Grand Encampment. At the session of the latter body in 1847, it declared this new Grand Encampment to be "irregular and unauthorized," and it refused to recognize it or its subordinates. Wheeling Encampment, however, was acknowledged to be a lawful body, as it had not given its adhesion to the irregular Grand Encampment. In January, 1851, the Grand Encampment of Virginia receded from its position of independence, and was recognized by the General Grand Encampment as one of its constituents. It so remained until 1861, when the Grand Commandery (the title which had been adopted in 1859) seceded from the Grand Encampment in consequence of the Civil War. It, however, returned to its allegiance in 1865, and has ever since remained a regular portion of the Templar Order of the United States.

Virgin, Weeping. See *Weeping Virgin*.

"Virtute et Silentio" and "Gloria in Excelsis Deo" are significant mottoes of the Royal Order of Scotland.

Vishnu. See *Puranas*.

Visible Masonry. In a circular published March 18, 1775, by the Grand Orient of France, reference is made to two divisions of the Order, namely, *Visible* and *Invisible Masonry*. Did we not know something of the Masonic contentions then existing in France between the Lodges and the supreme authority, we should hardly comprehend the meaning intended to be conveyed by these words. By "Invisible Masonry" they denoted that body of intelligent and virtuous Masons who, irrespective of any connection with dogmatic authorities, constituted "a Mysterious and Invisible Society of the True Sons of Light," who, scattered over the two hemispheres, were engaged, with one heart and soul, in doing everything for the glory of the Great Architect and the good of their fellow-men. By "Visible Masonry" they meant the congregation of Masons into Lodges, which were often affected by the contagious vices of the age in which they lived. The former is perfect; the latter continually needs purification. The words were originally invented to effect a particular purpose, and to bring the recusant Lodges of France into their obedience.

But they might be advantageously preserved, in the technical language of Masonry, for a more general and permanent object. Invisible Masonry would then indicate the abstract spirit of Masonry as it has always existed, while Visible Masonry would refer to the concrete form which it assumes in Lodge and Chapter organizations, and in different Rites and systems. The latter would be like the material church, or church militant; the former like the spiritual church, or church triumphant. Such terms might be found convenient to Masonic scholars and writers.

Visitation, Grand. The visit of a Grand Master, accompanied by his Grand Officers, to a subordinate Lodge, to inspect its condition, is called a *Grand Visitation*. There is no allusion to anything of the kind in the Old Constitutions, because there was no organization of the Order before the eighteenth century that made such an inspection necessary. But immediately after the revival in 1717, it was found expedient, in consequence of the growth of Lodges in London, to provide for some form of visitation and inspection. So, in the very first of the Thirty-nine General Regulations, adopted in 1721, it is declared that "the Grand Master or his Deputy hath authority and right not only to be present in any true Lodge, but also to preside wherever he is, with the Master of the Lodge on his left hand, and to order his Grand Wardens to attend him, who are not to act in any particular Lodges as Wardens, but in his presence and at his command; because there the Grand Master may command the Wardens of that Lodge, or any other brethren he pleaseth, to attend and act as his Wardens *pro tempore*." (*Constitutions*, 1723, p. 58.)

In compliance with this old regulation, whenever the Grand Master, accompanied by his Wardens and other officers, visits a Lodge in his jurisdiction, for the purpose of inspecting its condition, the Master and officers of the Lodge thus visited surrender their seats to the Grand Master and the Grand Officers.

Grand Visitations are among the oldest usages of Freemasonry since the revival period. In America they are not now so frequently practised, in consequence of the extensive territory over which the Lodges are scattered, and the difficulty of collecting at one point all the Grand Officers, many of whom generally reside at great distances apart. Still, where it can be done, the practise of Grand Visitations should never be neglected.

The power of visitation for inspection is confined to the Grand and Deputy Grand Master. The Grand Wardens possess no such prerogative. The Master must always tender the gavel and the chair to the Grand or Deputy Grand Master when either of them informally visits a Lodge; for the Grand Master and, in his absence, the Deputy have the right to preside in all Lodges where they may be present. But this privilege does not extend to the Grand Wardens.

Visiting Brethren. Every brother from abroad, or from any other Lodge, when he visits a Lodge, must be received with welcome and treated with hospitality. He must be clothed, that is to say, furnished with an apron, and, if the Lodge uses them (as every Lodge should), with gloves, and, if a Past Master, with the jewel of his rank. He must be directed to a seat, and the utmost courtesy extended to him. If of distinguished rank in the Order, the honors due to that rank must be paid to him.

This hospitable and courteous spirit is derived from the ancient customs of the Craft, and is inculcated in all the Old Constitutions. Thus, in the Lansdowne MS., it is directed "that every Mason receive or cherish strange Fellows when they come over the Countrey, and sett them on worke, if they will worke, as the manner is; (that is to say), if the Mason have any moulde stone in his place on worke; and if he have none, the Mason shall refresh him with money unto the next Lodge." A similar regulation is found in all the other manuscripts of the Operative Masons; and from them the usage has descended to their speculative successors.

At all Lodge banquets it is of obligation that a toast shall be drunk "to the visiting brethren." To neglect this would be a great breach of decorum.

Visit, Right of. Every affiliated Mason in good standing has a right to visit any other Lodge, wherever it may be, as often as it may suit his pleasure or convenience; and this is called, in Masonic law, "the right of visit." It is one of the most important of all Masonic privileges, because it is based on the principle of the identity of the Masonic Institution as one universal family, and is the exponent of that well-known maxim that "in every clime a Mason may find a home, and in every land a brother." It has been so long and so universally admitted, that I have not hesitated to rank it among the landmarks of the Order.

The admitted doctrine on this subject is, that the right of visit is one of the positive rights of every Mason, because Lodges are justly considered as only divisions for convenience of the universal Masonic family. The right may, of course, be lost, or forfeited on special occasions, by various circumstances; but any Master who shall refuse admission to a Mason in good standing, who knocks at the door of his Lodge, is expected to furnish some good and satisfactory reason for his thus violating a Masonic right. If the admission of the applicant, whether a member or visitor, would, in his opinion, be attended with injurious consequences, such, for instance, as impairing the harmony of the Lodge, a Master would then, I presume, be justified in refusing admission. But without the existence of some such good reason, Masonic jurists have always decided that the right of visitation is absolute and positive, and inures to every Mason in his travels throughout the world. See this subject discussed in its fullest extent in the author's *Text Book of Masonic Jurisprudence*, pp. 203–216.

Vitra. The representative deity of darkness in Vedic mythology, and the antagonist of Indra, as the personified light. Vitra also represents ignorance, superstition, fanaticism, and intolerance, the opponents of Masonry.

Vivat. "Vivat! vivat! vivat!" is the acclamation which accompanies the honors in the French Rite. Bazot (*Manuel*, p. 165) says it is "the cry of joy of Freemasons of the French Rite." *Vivat* is a Latin word, and signifies, literally, "May he live"; but it has been domiciliated in French, and Boiste (*Dictionnaire Universel*) defines it as "a cry of applause which expresses the wish for the preservation of any one." The French Masons say, "He was received with the triple vivat," to denote that "He was received with the highest honors of the Lodge."

Vogel, Paul Joachim Sigismund. A distinguished Masonic writer of Germany, who was born in 1753. He was at one time corector of the Sebastian School at Altdorf, and afterward First Professor of Theology and Ecclesiastical Counselor at Erlangen. In 1785 he published at Nuremberg, in three volumes, his *Briefe die Freimaurerei betreffend;* or, "Letters concerning Freemasonry." The first volume treats of the Knights Templar; the second, of the Ancient Mysteries; and the third, of Freemasonry. This was, says Kloss, the first earnest attempt made in Germany to trace Freemasonry to a true, historical origin. Vogel's theory was, that the Speculative Freemasons were derived from the Operative or Stone-Masons of the Middle Ages. The abundant documentary evidence that more recent researches have produced were then wanting, and the views of Vogel did not make that impression to which they were entitled. He has, however, the credit of having opened the way, after the Abbé Grandidier, for those who have followed him in the same field. He also delivered before the Lodges of Nuremberg, several *Discourses on the Design, Character, and Origin of Freemasonry*, which were published in one volume, at Berlin, in 1791.

Voigt, Friederich. A Doctor of Medicine, and Professor and Senator at Dresden. He was a member of the high degrees of the Rite of Strict Observance, where his Order name was *Eques à Falcone*, or Knight of the Falcon. In 1788 he attacked Starck's Rite of the Clerks of Strict Observance, and published an essay on the subject, in the year 1788, in the *Acta Historico-Ecclesiastica* of Weimar. Voigt exposed the Roman Catholic tendencies of the new system, and averred that its object was "to cite and command spirits, to find the philosopher's stone, and to establish the reign of the millennium." His development of the Kabbalistic character of the Rite made a deep impression on the Masonic world, and was one of the most effective attacks upon it made by its antagonists of the old Strict Observance.

Volshnuvus. Those who worship Vishnu, in white garments, and abstain from animal food. Believers in the third member of the Trimurti according to Hindu mythology, in him who was believed to be the preserver of the world, and who had undergone ten Avatars or incarnations, to wit, a bird, tortoise, wild boar, andro-lion, etc., of which the deity Krishna was the eighth incarnation in this line of Vishnu, and in which form he was supposed to be the son of Devanaguy and reared by the shepherd Nanda.

Voltaire. (*François-Marie Arouet.*) One of the most famous of French writers, born at Châtenay, near Sceaux, in 1694. His early life was loose and varied. In 1728 he became infatuated with a Madame du Chatelet. His literary works cover some 90 volumes. In 1743, the French government despatched him on a mission to Frederick the Great, by whom he was held in high favor, and in 1750, at the request of the king, he made his residence in Berlin, but five years later they quarreled, and Voltaire moved to Ferney, Switzerland. His literary talent was most varied, and in invective he had no equal. During his exile in England he imbibed Deistical theories, which marked his life. He was charged with atheism. He was initiated in the Lodge of the Nine Sisters, at Paris, February 7, 1778, in the presence of Benjamin Franklin and others distinguished in Masonry. His death, on May 30, 1778, gave rise to a memorable Lodge of Sorrow, which was held on the succeeding 28th of November.

Voting. Voting in Lodges *viva voce*, or by "aye" and "nay," is a modern innovation in America. During the Grand Mastership of the Earl of Loudoun, on April 6, 1736, the Grand Lodge of England, on the motion of Deputy Grand Master Ward, adopted "a new regulation of ten rules for explaining what concerned the decency of assemblies and communications." The tenth of these rules is in the following words:

"The opinions or votes of the members are always to be signified by each holding up one of his hands; which uplifted hands the Grand Wardens are to count, unless the number of hands be so unequal as to render the counting useless. Nor should any other kind of division be ever admitted among Masons." (*Constitutions*, 1738, p. 178.)

The usual mode of putting the question is for the presiding officer to say: "So many as are in favor will signify the same by the usual sign of the Order," and then, when those votes have been counted, to say: "So many as are of a contrary opinion will signify the same by the same sign." The votes are now counted by the Senior Deacon in a subordinate Lodge, and by the Senior Grand Deacon in a Grand Lodge, it having been found inconvenient for the Grand Wardens to perform that duty. The number of votes on each side is communicated by the Deacon to the presiding officer, who announces the result.

The same method of voting should be observed in all Masonic bodies.

Voting, Right of. Formerly, all members of the Craft, even Entered Apprentices, were permitted to vote. This was distinctly prescribed in the last of the Thirty-nine General Regulations adopted in 1721. (*Constitutions*, 1723, p. 70.) But the numerical strength of the Order, which was then in the First Degree, having now passed over to the Third, the modern rule in America (but not in England) is that the right of voting shall be restricted to Master Masons. A Master Mason may, therefore, speak and vote on all questions, except in trials where he is himself concerned as accuser or defendant. Yet by special regulation of his Lodge he may be prevented from voting on ordinary questions where his dues for a certain period—generally twelve months—have not been paid; and such a regulation exists in almost every Lodge. But no local by-law can deprive a member, who has not been suspended, from voting on the ballot for the admission of candidates, because the sixth regulation of 1721 distinctly requires that each member present on such occasion shall give his consent before the candidate can be admitted. (*Ibid.*, p. 59.) And if a member were deprived by any by-law of the Lodge, in consequence of non-payment of his dues, of the right of expressing his consent or dissent, the ancient regulation would be violated, and a candidate might be admitted without the unanimous consent of all the members present. And this rule is so rigidly enforced, that on a ballot for initiation no member can be excused from voting. He must assume the responsibility of casting his vote, lest it should afterward be said that the candidate was not admitted by unanimous consent.

Vouching. It is a rule in Masonry, that a Lodge may dispense with the examination of a visitor, if any brother present will vouch that he possesses the necessary qualifications. This is an important prerogative that every Mason is entitled to exercise; and yet it is one which may so materially affect the well-being of the whole Fraternity, since, by its injudicious use, impostors might be introduced among the faithful, that it should be controlled by the most stringent regulations.

To vouch for one is to bear witness for him, and in witnessing to truth, every caution should be observed, lest falsehood may cunningly assume its garb. The brother who vouches should know to a certainty that the one for whom he vouches is really what he claims to be. He should know this, not from a casual conversation, nor a loose and careless inquiry, but from "*strict trial, due examination, or lawful information.*" These are the three requisites which the ritual has laid down as essentially necessary to authorize the act of vouching. Let us inquire into the import of each.

1. *Strict Trial.* By this is meant that every question is to be asked, and every answer demanded, which is necessary to convince the examiner that the party examined is acquainted with what he ought to know, to entitle him to the appellation of a brother. Nothing is to be taken for granted—categorical answers must be returned to all that it is deemed important to be asked; no forgetfulness is to be excused; nor is the want of memory to be considered as a valid reason for the want of knowledge. The Mason who is so unmindful of his obligations as to have forgotten the instructions he has received, must pay the penalty of his carelessness, and be deprived of his contemplated visit to that society whose secret modes of recognition he has so little valued as not to have treasured them in his memory. The "strict trial" refers to the matter which is sought to be obtained by inquiry; and while there are some things which may safely be passed over in the investigation of one who confesses himself to be "rusty," because they are details which require much study to acquire and constant practise to retain, there are still other things of great importance which must be rigidly demanded.

2. *Due Examination.* If "strict trial" refers to the *matter*, "due examination" alludes to the *mode* of investigation. This must be conducted with all the necessary forms and antecedent cautions. Inquiries should be made as to the time and place of initiation as a preliminary step, the Tiler's OB. of course never being omitted. Then the good old rule of "commencing at the beginning" should be pursued. Let everything go on in regular course; not is it to be supposed that the information sought was originally received. Whatever be the suspicions of imposture, let no expression of those suspicions be made until the final decree for rejection is uttered. And let that decree be uttered in general terms, such as, "I am not satisfied," or "I do not recognize you," and not in more specific language, such as, "You did not answer this inquiry," or "You are ignorant on that point." The candidate for examination is only entitled to know that he has not complied generally with the requisitions of his examiner. To descend to particulars is always improper, and often dangerous. Above all, never ask what the lawyers call "leading questions," which include in themselves the answer, nor in any way aid the memory, or prompt the forgetfulness of the party examined, by the slightest hints.

3. *Lawful Information.* This authority for vouching is dependent on what has been already described. For no Mason can lawfully give information of another's qualifications unless he has himself actually tested him. But it is not every Mason who is competent to give "lawful information." Ignorant or unskilful brethren cannot do so, because they are incapable of discovering truth or of detecting error. A "rusty Mason" should never attempt to examine a stranger, and certainly, if he does, his opinion as to the result is worth nothing.

If the information given is on the ground that the party who is vouched for has been seen sitting in a Lodge, care must be taken to inquire if it was a "just and legally constituted Lodge of Master Masons." A person may forget from the lapse of time, and vouch for a stranger as a Master Mason, when the Lodge in which he saw him was only opened in the First or Second Degree. Information given by letter, or through a third party, is irregular. The person giving the information, the one receiving it, and the one of whom it is given, should all be present at the time, for otherwise there would be no certainty of identity. The information must be positive, not founded on belief or opinion, but derived from a legitimate source. And, lastly, it must not have been received casually, but for the very purpose of being used for Masonic purposes. For one to say to another, in the course of a desultory conversation, "A. B. is a Mason," is not sufficient. He may not be speaking with due caution, under the expectation that his words will be considered of weight. He must say something to this effect, "I know this man to be a Master Mason, for such or such reasons, and you may safely recognize him as such." This alone will insure the necessary care and proper observance of prudence.

Lastly, never should an unjustifiable delicacy weaken the rigor of these rules. For the wisest and most evident reasons, that merciful maxim of the law, which says that it is better that ninety-nine guilty men should escape than that one innocent man should be punished, is with us reversed; so that in Masonry *it is better that ninety and nine true men should be turned away from the door of a Lodge, than that one cowan should be admitted.*

Voyages. The French Masons thus call some of the proofs and trials to which a candidate is subjected in the course of initiation into any of the degrees. In the French Rite, the voyages in the Symbolic degrees are three in the first, five in the second, and seven in the third. Their symbolic designs are thus briefly explained by Ragon (*Cours des Init.*, pp. 90, 132) and Lenoir (*La Franche-Maçonnerie*, p. 263): The voyages of the Entered Apprentice are now, as they were in the Ancient Mysteries, the symbol of the life of man. Those of the Fellow-Craft are emblematic of labor in search of knowledge. Those of the Master Mason are symbolic of the pursuit of crime, the wandering life of the criminal, and his vain attempts to escape remorse and punishment. It will be evident that the ceremonies in all the Rites of Masonry, although under a different name, lead to the same symbolic results.

W

W. The twenty-third letter of the English alphabet, which originated in the Middle Ages, is a double *v*, and is peculiar to the English, German, and Dutch alphabets.

W.·. An abbreviation of *Worshipful*, of *West*, of *Warden*, and of *Wisdom*.

Waechter, Eberhard, Baron Von. Lord of the Chamber to the King of Denmark, and Danish Ambassador at Ratisbon; was born in 1747. He was at one time a very active member of the Rite of Strict Observance, where he bore the characteristic name of *Eques à cerâso*, and had been appointed Chancellor of the German Priories of the 7th Province. When the spiritual schism of the Order made its vast pretensions to a secret authority derived from unknown superiors, whose names they refused to divulge, Von Waechter was sent to Italy by the old Scottish Lodge of which Duke Ferdinand was Grand Master, that he might obtain some information from the Pretender, and from other sources, as to the true character of the Rite. Von Waechter was unsuccessful, and the intelligence which he brought back to Germany was unfavorable to Von Hund, and increased the embarrassments of the Strict Observance Lodges. But he himself lost reputation. A host of enemies attacked him. Some declared that while in Italy he had made a traffic of Masonry to enrich himself; others that he had learned and was practising magic; and others again that he had secretly attached himself to the Jesuits. Von Waechter stoutly denied these charges; but it is certain that, from being in very moderate circumstances, he had, after his return from Italy, become suddenly and unaccountably rich. Yet Mossdorf says that he discharged his mission with great delicacy and judgment. Thory, quoting the *Beytrag zur neuesten Geschichte* (p. 150), says that in 1782 he proposed to give a new organization to the Templar system of Masonry, on the ruins, perhaps, of both branches of the Strict Observance, and declared that he possessed the true secrets of the Order. His proposition for a reform was not accepted by the German Masons, because they suspected that he was an agent of the Jesuits. (*Acta Lat.*, i., 152.) Kloss (*Bibliog.*, No. 622[b]) gives the title of a work published by him in 1822 as *Worte der Wahrheit an die Menschen, meine Brüder*. He died May 25, 1825, one, perhaps, of the last actors in the great Masonic drama of the Strict Observance.

Wages of a Master Mason, Symbolic. See *Foreign Country*.

Wages of Operative Masons. In all the Old Constitutions praise is given to St. Alban because he raised the wages of the Masons. Thus the Edinburgh-Kilwinning MS. says: "St. Albans loved Masons well, and cherished them much, and made their pay right good, standing by as the realme did, for he gave them iis. a week, and 3*d.* to their cheer; for before that time, through all the land, a Mason had but a penny a day and his meat, until St. Alban amended it." We may compare this rate of wages in the third century with that of the fifteenth, and we will be surprised at the little advance that was made. In Grosse and Astle's *Antiquarian Repertory* (iii., p. 58) will be found an extract from the Roles of Parliament, which contains a petition, in the year 1443, to Parliament to regulate the price of labor. In it are the following items: "And y^t^ from the Fest of Ester unto Mighelmasse y^e^ wages of eny free Mason or maister carpenter exceed not by the day iiii*d.*, with mete and drynk, and withoute mete and drink v*d.*, ob.

"A Maister Tyler or Sclatter, rough mason and meen carpenter, and other artificers concernyng beldyng, by the day iii*d.*, with mete and drynk, and withoute mete and drynke, iii*d.*, ob.

"And from the Fest of Mighelmasse unto Ester, a free Mason and a maister carpenter by the day ii*d.*, with mete and drynk, withoute mete and drink, iii*d.*, ob.

"Tyler, meen carpenter, rough mason, and other artificers aforesaid, by the day ii*d.*, ob, with mete and drynk, withoute mete and drynk iiii*d.*, and every other werkeman and laborer by the day i*d.*, ob, with mete and drynk, and withoute mete and drink iii*d.*, and who that lasse deserveth, to take lasse."

Wages of the Workmen at the Temple. Neither the Scriptures, nor Josephus, give us any definite statement of the amount of wages paid, nor the manner in which they were paid, to the workmen who were engaged in the erection of King Solomon's Temple. The cost of its construction, however, must have been immense, since it has been estimated that the edifice alone consumed more gold and silver than at present exists upon the whole earth; so that Josephus very justly says that "Solomon made all these things for the honor of God, with great variety and magnificence, sparing no cost, but using all possible liberality in adorning the Temple." We learn, as one instance of this liberality, from the 2d Book of Chronicles, that Solomon paid annually to the Tyrian Masons, the servants of Hiram, "twenty thousand measures of beaten wheat, and twenty thousand measures of barley, and twenty thousand baths of wine, and twenty thousand baths of oil." The *bath* was a measure equal to seven and a half gallons wine measure; and the *cor* or *chomer*, which we translate by the indefinite word *measure*, contained ten baths; so that the corn, wine, and oil furnished by King Solomon, as wages to the servants of Hiram of Tyre, amounted to one hundred and ninety thousand bushels of the first, and one hundred and fifty thousand gallons each of the second and third. The sacred records do not inform us what further wages they received, but we elsewhere learn that King Solomon gave them as a free gift a sum equal to more than thirty-two millions of dollars. The whole amount of wages paid to the craft is stated to have been about six hundred and seventy-two millions of dollars; but we have no means of knowing how that amount was distributed; though it is natural to suppose that those of the most skill and experience received the highest wages. The Harodim, or chiefs of the workmen, must have been better paid than the Ish Sabal, or mere laborers.

The legend-makers of Masonry have not been idle in their invention of facts and circumstances in relation to this subject, the whole of which have little more for a foundation than the imaginations of the inventors. They form, however, a part of the legendary history of Masonry, and are interesting for their ingenuity, and sometimes even for their absurdity.

Wahabites. A Mohammedan sect, established about 1740, dominant through the greater part of Arabia. Their doctrine was reformatory, to bring back the observances of Islam to the literal precepts of the Koran. Mecca and Medina were conquered by them. The founder was Ibn-abd-ul-Wahab, son of an Arab sheik, born in the latter part of the seventeenth century, and died 1787. Their teachings have been received by the Mussulman population of India, and much uneasiness is feared therefrom.

Wales. The earliest Lodges in Wales were two at Chester and one at Congleton, all three established in 1724, and Dr. Anderson records that Grand Master Inchiquin granted a Deputation, May 10, 1727, to Hugh Warburton, Esq., to be Provincial Grand Master of North Wales, and another, June 24th in the same year, to Sir Edward Mansel, to be Provincial Grand Master of South Wales. (*Constitutions*, 1738, p. 191.) Wales forms a part of the Masonic obedience of the Grand Lodge of England, and the Fraternity there are directly governed by four Provincial Grand Lodges, viz., North Wales with 21 Lodges; Shropshire with 13; South Wales (Eastern Division) with 27; and South Wales (Western Division) with 12.

Wallachia, Grand Scottish Degree of. Found in Fustier's lists.

Wands. Oliver, under this title in his *Dictionary*, refers to the three scepters which, in the Royal Arch system of England, are placed in a triangular form beneath the canopy in the East, and which, being surmounted respectively by a crown, an All-seeing eye, and a miter, refer to the regal, the prophetical, and the sacerdotal offices. In his *Landmarks* he calls them *scepters*. But *rod* or *wand* is the

better word, because, while the *scepter* is restricted to the insignia of kings, the *rod* or *wand* was and still is used as an indiscriminate mark of authority for all offices.

Wardens. In every Symbolic Lodge, there are three principal officers, namely, a Master, a Senior Warden, and a Junior Warden. This rule has existed ever since the revival, and for some time previous to that event, and is so universal that it has been considered as one of the landmarks. It exists in every country and in every Rite. The titles of the officers may be different in different languages, but their functions, as presiding over the Lodge in a tripartite division of duties, are everywhere the same. The German Masons call the two Wardens *erste* and *zweite Aufseher;* the French, *premier* and *second Surveillant;* the Spanish, *primer* and *segundo Vigilante;* and the Italians, *primo* and *secondo Sorvegliante.*

In different Rites, the positions of these officers vary. In the American Rite, the Senior Warden sits in the West and the Junior in the South. In the French and Scottish Rites, both Wardens are in the West, the Senior in the Northwest and the Junior in the Southwest; but in all, the triangular position of the three officers relatively to each other is preserved; for a triangle being formed within the square of the Lodge, the Master and Wardens will each occupy one of the three points.

The precise time when the presidency of the Lodge was divided between these three officers, or when they were first introduced into Masonry, is unknown. The Lodges of Scotland, during the Operative *régime*, were governed by a Deacon and one Warden. The Earl of Cassilis was Master of Kilwinning in 1670, though only an Apprentice. This seems to have been not unusual, as there were cases of Apprentices presiding over Lodges. The Deacon performed the functions of a Master, and the Warden was the second officer, and took charge of and distributed the funds. In other words, he acted as a Treasurer. This is evident from the minutes of the Edinburgh Lodge, recently published by Bro. Lyon. But the head of the Craft in Scotland at the same time was called the Warden General. This regulation, however, does not appear to have been universal even in Scotland, for in the "Mark Book" of the Aberdeen Lodge, under date of December 27, 1670, which was published by Bro. W. J. Hughan in the *Voice of Masonry* (February, 1872), we find there a Master and Warden recognized as the presiding officers of the Lodge in the following statute: "And lykwayse we all protest, by the oath we have made at our entrie, to own the Warden of our Lodge as the next man in power to the Maister, and in the Maister's absence he is full Maister."

Some of the English manuscript Constitutions recognize the offices of Master and Wardens. Thus the Harleian MS., No. 1942, whose date is supposed to be about 1670, contains the "new articles" said to have been agreed on at a General Assembly held in 1663, in which is the following passage: "That for the future the sayd Society, Company and Fraternity of Free Masons shal bee regulated and governed by one Master & Assembly & Wardens, as ye said Company shall think fit to chose, at every yearely General Assembly."

As the word "Warden" does not appear in the earlier manuscripts, it might be concluded that the office was not introduced into the English Lodges until the latter part of the seventeenth century. Yet this does not absolutely follow. For the office of Warden might have existed, and no statutory provision on the subject have been embraced in the general charges which are contained in those manuscripts, because they relate not to the government of Lodges, but the duties of Masons. This, of course, is conjectural; but the conjecture derives weight from the fact that Wardens were officers of the English gilds as early as the fourteenth century. In the Charters granted by Edward III., in 1354, it is permitted that these companies shall yearly elect for their government "a certain number of Wardens." To a list of the companies of the date of 1377 is affixed what is called the "Oath of the Wardens of Crafts," of which this is the commencement: "Ye shall swere that ye shall wele and treuly oversee the Craft of ——— whereof ye be chosen Wardeyns for the year." It thus appears that the Wardens were at first the presiding officers of the gilds. At a later period, in the reign of Elizabeth, we find that the chief officer began to be called Master; and in the time of James I., between 1603 and 1625, the gilds were generally governed by a Master and Wardens. An ordinance of the Leather-Sellers Company at that time directed that on a certain occasion "the Master and Wardens shall appear in state." It is not, therefore, improbable that the government of Masonic Lodges by a Master and two Wardens was introduced into the regulations of the Order in the seventeenth century, the "new article" of 1663 being a statutory confirmation of a custom which had just begun to prevail.

Senior Warden. He is the second officer in a Symbolic Lodge, and governs the craft in the hours of labor. In the absence of the Master he presides over the Lodge, appointing some brother, not the Junior Warden, to occupy his place in the west. His jewel is a level, a symbol of the equality which exists among the Craft while at labor in the Lodge. His seat is in the west, and he represents the column of Strength. He has placed before him, and carries in all processions, a column, which is the representative of the right-hand pillar that stood at the porch of King Solomon's Temple. The Junior Warden has a similar column, which represents the left-hand pillar. During labor the column of the Senior Warden is erect in the Lodge, while that of the Junior is recumbent. At refresh-

ment, the position of the two columns is reversed.

Junior Warden. The duties of this officer have already been described. (See *Junior Warden.*)

There is also an officer in a Commandery of Knights Templar, the fifth in rank, who is styled "Senior Warden." He takes an important part in the initiation of a candidate. His jewel of office is a triple triangle, the emblem of Deity.

Wardens, Grand. See *Grand Wardens.*

Warder. The literal meaning of Warder is one who keeps watch and ward. In the Middle Ages, the Warder was stationed at the gate or on the battlements of the castle, and with his trumpet sounded alarms and announced the approach of all comers. Hence the Warder in a Commandery of Knights Templar bears a trumpet, and his duties are prescribed to be to announce the approach and departure of the Eminent Commander, to post the sentinels, and see that the Asylum is duly guarded, as well as to announce the approach of visitors. His jewel is a trumpet and crossed swords engraved on a square plate.

Warlike Instrument. In the ancient initiations, the aspirant was never permitted to enter on the threshold of the Temple in which the ceremonies were conducted until, by the most solemn warning, he had been impressed with the necessity of secrecy and caution. The use, for this purpose, of a "warlike instrument" in the First Degree of Masonry, is intended to produce the same effect. A sword has always been employed for that purpose; and the substitute of the point of the compasses, taken from the altar at the time, is an absurd sacrifice of symbolism to the convenience of the Senior Deacon. The compasses are peculiar to the Third Degree. In the earliest rituals of the last century it is said that the entrance is "upon the point of a sword, or spear, or some warlike instrument." Krause (*Kunsturk.*, ii., 142), in commenting on this expression, has completely misinterpreted its signification. He supposes that the sword was intended as a sign of jurisdiction now assumed by the Lodge. But the real object of the ceremony is to teach the neophyte that as the sword or warlike instrument will wound or prick the flesh, so will the betrayal of a trust confided wound or prick the conscience of him who betrays it.

War, Masonry in. The question how Masons should conduct themselves in time of war, when their own country is one of the belligerents, is an important one. Of the political course of a Mason in his individual and private capacity there is no doubt. The Charges declare that he must be "a peaceable subject to the civil powers, and never be concerned in plots and conspiracies against the peace and welfare of the nation." (*Constitutions*, 1723, p. 50.) But so anxious is the Order to be unembarrassed by all political influences, that treason, however discountenanced by the Craft, is not held as a crime which is amenable to Masonic punishment. For the same charge affirms that "if a brother should be a rebel against the State, he is not to be countenanced in his rebellion, however he may be pitied as an unhappy man; and if convicted of no other crime, though the loyal brotherhood must and ought to disown his rebellion and give no umbrage or ground of political jealousy to the government for the time being, they cannot expel him from the Lodge, and his relation to it remains indefeasible."

The Mason, then, like every other citizen, should be a patriot. He should love his country with all his heart; should serve it faithfully and cheerfully; obey its laws in peace; and in war should be ever ready to support its honor and defend it from the attacks of its enemies. But even then the benign principles of the Institution extend their influence, and divest the contest of many of its horrors. The Mason fights, of course, like every other man, for victory; but when the victory is won, he will remember that the conquered foe is still his brother.

On the occasion, many years ago, of a Masonic banquet given immediately after the close of the Mexican War to General Quitman by the Grand Lodge of South Carolina, that distinguished soldier and Mason remarked that, although he had devoted much of his attention to the nature and character of the Masonic institution, and had repeatedly held the highest offices in the gift of his brethren, he had never really known what Masonry was until he had seen its workings on the field of battle.

But as a collective and organized body—in its Lodges and its Grand Lodges—it must have nothing to do with war. It must be silent and neutral. The din of the battle, the cry for vengeance, the shout of victory, must never penetrate its portals. Its dogmas and doctrines all teach love and fraternity; its symbols are symbols of peace; and it has no place in any of its rituals consecrated to the inculcation of human contention.

Bro. C. W. Moore, in his *Biography of Thomas Smith Webb*, the great American ritualist, mentions a circumstance which occurred during the period in which Webb presided over the Grand Lodge of Rhode Island, and to which Moore, I think, inconsiderately has given his hearty commendation.

The United States was at that time engaged in a war with England. The people of Providence having commenced the erection of fortifications, the Grand Lodge volunteered its services; and the members, marching in procession as a Grand Lodge to the southern part of the town, erected a breastwork, to which was given the name of Fort Hiram. (See *Fort Masonic.*) I doubt the propriety of the act. While (to repeat what has been just said) every individual member of the Grand Lodge, as a Mason, was bound by his obligation to be "true to his government," and to defend it from the attacks of its enemies, it was, I think, unseemly, and contrary to the

peaceful spirit of the Institution, for any organized body of Masons, organized as such, to engage in a warlike enterprise. But the patriotism, if not the prudence of the Grand Lodge, cannot be denied.

Since writing this paragraph, I have met in Bro. Murray Lyon's *History of the Lodge of Edinburgh* (p. 83) with a record of the Grand Lodge of Scotland, a century ago, which sustains the view that I have taken. In 1777, recruits were being enlisted in Scotland for the British army, which was to fight the Americans in the war of the Revolution, which had just begun. Many of the Scotch Lodges offered, through the newspapers, bounties to all who should enlist. But on February 2, 1778, the Grand Lodge passed a resolution, which was published on the 12th, through the Grand Secretary, in the following circular:

"At a quarterly meeting of the Grand Lodge of Scotland, held here the second instant, I received a charge to acquaint all the Lodges of Scotland holding of the Grand Lodge that the Grand Lodge has seen with concern advertisements in the public newspapers, from different Lodges in Scotland, not only offering a bounty to recruits who may enlist in the new levies, but with the addition that all such recruits shall be admitted to the freedom of Masonry. The first of these they consider as an improper alienation of the funds of the Lodge from the support of their poor and distressed brethren; and the second they regard as a prostitution of our Order, which demands the reprehension of the Grand Lodge. Whatever share the brethren may take as individuals in aiding these levies, out of zeal to serve their private friends or to promote the public service, the Grand Lodge considered it to be repugnant to the spirit of our Craft that any Lodge should take a part in such a business as a collective body. For Masonry is an Order of Peace, and it looks on all mankind to be brethren as Masons, whether they be at peace or at war with each other as subjects of contending countries. The Grand Lodge therefore strongly enjoins that the practice may be forthwith discontinued. By order of the Grand Lodge of Scotland. W. Mason, Gr. Sec."

Of all human institutions, Freemasonry is the greatest and purest Peace Society. And this is because its doctrine of universal peace is founded on the doctrine of a universal brotherhood.

Warrant of Constitution. The document which authorizes or gives a Warrant to certain persons therein named to organize and constitute a Lodge, Chapter, or other Masonic body, and which ends usually with the formula, "for which this shall be your sufficient warrant."

The practise of granting Warrants for the constitution of Lodges, dates only from the period of the revival of Masonry in 1717. Previous to that period "a sufficient number of brethren," says Preston (*Illustrations*, ed. 1792, p. 248), "met together within a certain district, had ample power to make Masons, and discharge every duty of Masonry without a Warrant of Constitution." But in 1717 a regulation was adopted "that the privilege of assembling as Masons, which had been hitherto unlimited, should be vested in certain Lodges or assemblies of Masons convened in certain places; and that every Lodge to be hereafter convened, except the four old Lodges at this time existing, should be legally authorized to act by a Warrant from the Grand Master, for the time being, granted to certain individuals by petition, with the consent and approbation of the Grand Lodge in communication; and that without such Warrant no Lodge should be hereafter deemed regular or constitutional." And consequently, ever since the adoption of that regulation, no Lodge has been regular unless it is working under such an authority. The word Warrant is appropriately used, because in its legal acceptation it means a document giving authority to perform some specified act.

In England, the Warrant of Constitution emanates from the Grand Master; in the United States, from the Grand Lodge. In America, the Grand Master grants only a Dispensation to hold a Lodge, which may be revoked or confirmed by the Grand Lodge; in the latter case, the Warrant will then be issued. The Warrant of Constitution is granted to the Master and Wardens, and to their successors in office; it continues in force only during the pleasure of the Grand Lodge, and may, therefore, at any time be revoked, and the Lodge dissolved by a vote of that body, or it may be temporarily arrested or suspended by an edict of the Grand Master. This will, however, never be done, unless the Lodge has violated the ancient landmarks, or failed to pay due respect and obedience to the Grand Lodge or to the Grand Master. At the formation of the first Lodges in a number of the States in the South and Middle West, the Grand Lodges of other States granted both Dispensation and Charter.

When a Warrant of Constitution is revoked or recalled, the jewels, furniture, and funds of the Lodge revert to the Grand Lodge.

Lastly, as a Lodge holds its communications only under the authority of this Warrant of Constitution, no Lodge can be opened, or proceed to business, unless it be present. If it be mislaid or destroyed, it must be recovered, or another obtained; and until that is done, the communications of the Lodge must be suspended; and if the Warrant of Constitution be taken out of the room during the session of the Lodge, the authority of the Master instantly ceases.

Washing Hands. See *Lustration*.

Washington. Freemasonry in an organized form was introduced into Washington by the Grand Lodge of Oregon, which established four Lodges there previous to the year 1858. These Lodges were Olympia, No. 5; Steilacoom, No. 8; Grand Mound, No. 21, and Washington, No. 22. On December 6–9, 1858, delegates from these four Lodges met in convention at the city of Olympia, and organ-

ized the Grand Lodge of Free and Accepted Masons of the Territory of Washington. T. F. McElroy was elected Grand Master, and T. M. Reed, Grand Secretary.

In 1872 the Ancient and Accepted Scottish Rite was introduced by Bro. Edwin A. Sherman, the agent of the Supreme Council of the Southern Jurisdiction, and several bodies of that Rite were organized. The Grand Chapter of Washington was organized in 1884; and the Grand Commandery of Knights Templar in 1887.

Washington, Congress of. A Congress of American Masons was convoked at the city of Washington, in the year 1822, at the call of several Grand Lodges, for the purpose of recommending the establishment of a General Grand Lodge of the United States. The result was an unsuccessful one.

Washington, George. The name of Washington claims a place in Masonic biography, not because of any services he has done to the Institution either as a worker or a writer, but because the fact of his connection with the Craft is a source of pride to every American Mason, at least, who can thus call the "Father of his Country" a brother. There is also another reason. While the friends of the Institution have felt that the adhesion to it of a man so eminent for virtue was a proof of its moral and religious character, the opponents of Masonry, being forced to admit the conclusion, have sought to deny the premises, and, even if compelled to admit the fact of Washington's initiation, have persistently asserted that he never took any interest in it, disapproved of its spirit, and at an early period of his life abandoned it. The truth of history requires that these misstatements should be met by a brief recital of his Masonic career.

Washington was initiated, in 1752, in the Lodge at Fredericksburg, Virginia, and the records of that Lodge, still in existence, present the following entries on the subject. The first entry is thus:

"Nov. 4th, 1752. This evening Mr. George Washington was initiated as an Entered Apprentice"; and the receipt of the entrance fee, amounting to £2 3*s*., is acknowledged.

On the 3d of March in the following year, "Mr. George Washington" is recorded as having been passed a Fellow-Craft; and on the 4th of the succeeding August, the record of the transactions of the evening states that "Mr. George Washington," and others whose names are mentioned, have been raised to the sublime degree of Master Mason.

For five years after his initiation, he was engaged in active military service, and it is not likely that during that period his attendance on the communications of the Lodge could have been frequent. Some English writers have asserted that he was made a Mason during the old French War, in a military Lodge attached to the 46th Regiment. The Bible on which he is said to have been obligated is still in existence, although the Lodge was many years ago dissolved, at Halifax, Nova Scotia. The records of the Lodge are, or were, not long since, extant, and furnish the evidence that Washington was there, and received some Masonic degree. It is equally clear that he was first initiated in Fredericksburg Lodge, for the record is still in possession of the Lodge.

Three methods have been adopted to reconcile this apparent discrepancy. Bro. Hayden, in his work on *Washington and his Masonic Compeers* (p. 31), suggests that an obligation had been administered to him as a test-oath when visiting the Lodge, or that the Lodge, deeming the authority under which he had been made insufficient, had required him to be healed and reobligated. Neither of these attempts to solve the difficulty appears to have any plausibility.

Bro. C. W. Moore, of Massachusetts, in the *Freemasons' Monthly Magazine* (vol. xi., p. 261), suggests that, as it was then the custom to confer the Mark Degree as a side degree in Masters' Lodges, and as it has been proved that Washington was in possession of that degree, he may have received it in Lodge No. 227, attached to the 46th Regiment. This certainly presents a more satisfactory explanation than either of those offered by Bro. Hayden.

The connection of Washington with the British military Lodge will serve as some confirmation of the tradition that he was attentive to Masonic duties during the five years from 1753 to 1758, when he was engaged in military service.

There is ample evidence that during the Revolutionary War, while he was Commander-in-Chief of the American armies, he was a frequent attendant on the meetings of military Lodges. Some years ago, Captain Hugh Maloy, a revolutionary veteran, then residing in Ohio, declared that on one of these occasions he was initiated in Washington's marquée, the chief himself presiding at the ceremony. Bro. Scott, a Past Grand Master of Virginia, asserted that Washington was in frequent attendance on the communications of the brethren. The proposition made to elect him a Grand Master of the United States, as will be hereafter seen, affords a strong presumption that his name as a Mason had become familiar to the Craft.

In 1777, the Convention of Virginia Lodges recommended Washington as the most proper person to be elected Grand Master of the Independent Grand Lodge of that commonwealth. Dove has given in his *Text-Book* the complete records of the Convention; and there is therefore no doubt that the nomination was made. It was, however, declined by Washington.

Soon after the beginning of the Revolution, a disposition was manifested among American Masons to dissever their connection, as subordinates, with the Masonic authorities of the mother country, and in several of the newly erected States the Provincial

Grand Lodges assumed an independent character. The idea of a Grand Master of the whole of the United States had also become popular. On February 7, 1780, a convention of delegates from the military Lodges in the army was held at Morristown, in New Jersey, when an address to the Grand Masters in the various States was adopted, recommending the establishment of "one Grand Lodge in America," and the election of a Grand Master. This address was sent to the Grand Lodges of Massachusetts, Pennsylvania and Virginia; and although the name of Washington is not mentioned in it, those Grand Lodges were notified that he was the first choice of the brethren who had framed it.

While these proceedings were in progress, the Grand Lodge of Pennsylvania had taken action on the same subject. On January 13, 1780, it had held a session, and it was unanimously declared that it was for the benefit of Masonry that "a Grand Master of Masons throughout the United States" should be nominated; whereupon, with equal unanimity, General Washington was elected to the office. It was then ordered that the minutes of the election be transmitted to the different Grand Lodges in the United States, and their concurrence therein be requested. The Grand Lodge of Massachusetts, doubting the expediency of electing a General Grand Master, declined to come to any determination on the question, and so the subject was dropped.

This will correct the error into which many foreign Grand Lodges and Masonic writers have fallen, of supposing that Washington was ever a Grand Master of the United States. The error was strengthened by a medal contained in Merzdorf's *Medals of the Fraternity of Freemasons*, which the editor states was struck by the Lodges of Pennsylvania. This statement is, however, liable to great doubt. The date of the medal is 1797. On the obverse is a likeness of Washington, with the device, "Washington, President, 1797." On the reverse is a tracing-board and the device, "Amor, Honor, et Justitia. G. W., G. G. M." French and German Masonic historians have been deceived by this medal, and refer to it as their authority for asserting that Washington was a Grand Master. Lenning and Thory, for instance, place the date of his election to that office in the year in which the medal was struck. More recent European writers, however, directed by the researches of the American authorities, have discovered and corrected the mistake.

We next hear of Washington's official connection in the year 1788. Lodge No. 39, at Alexandria, which had hitherto been working under the Grand Lodge of Pennsylvania, in 1788 transferred its allegiance to Virginia. On May 29th in that year the Lodge adopted the following resolution:

"The Lodge proceeded to the appointment of Master and Deputy Master to be recommended to the Grand Lodge of Virginia, when George Washington, Esq., was unanimously chosen Master; Robert McCrea, Deputy Master; Wm. Hunter, Jr., Senior Warden; John Allison, Junior Warden."

It was also ordered that a committee should wait on General Washington, "and inquire of him whether it will be agreeable to him to be named in the Charter." What was the result of that interview, we do not positively know. But it is to be presumed that the reply of Washington was a favorable one, for the application for the Charter contained his name, which would hardly have been inserted if it had been repugnant to his wishes. And the Charter or Warrant under which the Lodge is still working is granted to Washington as Master. The appointing clause is in the following words:

"Know ye that we, Edmund Randolph, Esquire, Governor of the Commonwealth aforesaid, and Grand Master of the Most Ancient and Honorable Society of Freemasons within the same, by and with the consent of the Grand Lodge of Virginia, do hereby constitute and appoint our illustrious and well-beloved Brother, George Washington, Esquire, late General and Commander-in-Chief of the forces of the United States of America, and our worthy Brethren Robert McCrea, William Hunter, Jr., and John Allison, Esqs., together with all such other brethren as may be admitted to associate with them, to be a 'first, true, and regular Lodge of Freemasons, by the name, title, and designation of the Alexandria Lodge, No. 22.'" In 1805, the Lodge, which is still in existence, was permitted by the Grand Lodge to change its name to that of "Washington Alexandria," in honor of its first Master.

The evidence, then, is clear that Washington was the Master of a Lodge. Whether he ever assumed the duties of the office, and, if he assumed, how he discharged them, we know only from the testimony of Timothy Bigelow, who, in a Eulogy delivered before the Grand Lodge of Massachusetts, two months after Washington's death, and eleven after his appointment as Master, made the following statement:

"The information received from our brethren who had the happiness to be members of the Lodge over which he presided for many years, and of which he died the Master, furnishes abundant proof of his persevering zeal for the prosperity of the Institution. Constant and punctual in his attendance, scrupulous in his observance of the regulations of the Lodge, and solicitous, at all times, to communicate light and instruction, he discharged the duties of the Chair with uncommon dignity and intelligence in all the mysteries of our art."

There is also a very strong presumption that Washington accepted and discharged the duties of the Chair to the satisfaction of the Lodge. At the first election held after the Charter had been issued, he was elected, or we should rather say reelected, Master. The

record of the Lodge, under the date of December 20, 1788, is as follows:

"His Excellency, General Washington, unanimously elected Master; Robert McCrea, Senior Warden; Wm. Hunter, Jr., Junior Warden; Wm. Hodgson, Treasurer; Joseph Greenway, Secretary; Dr. Frederick Spanbergen, Senior Deacon; George Richards, Junior Deacon." The subordinate officers had undergone a change: McCrea, who had been named in the petition as Deputy Master, an officer not recognized in this country, was made Senior Warden; Wm. Hunter, who had been nominated as Senior Warden, was made Junior Warden; and the original Junior Warden, John Allison, was dropped. But there was no change in the office of Master. Washington was again elected. The Lodge would scarcely have been so persistent without his consent; and if his consent was given, we know, from his character, that he would seek to discharge the duties of the office to his best abilities. This circumstance gives, if it be needed, strong confirmation to the statement of Bigelow.

But incidents like these are not all that are left to us to exhibit the attachment of Washington to Masonry. On repeated occasions he has announced, in his letters and addresses to various Masonic bodies, his profound esteem for the character, and his just appreciation of the principles, of that Institution into which, at so early an age, he had been admitted. And during his long and laborious life, no opportunity was presented of which he did not avail himself to evince his esteem for the Institution.

Thus, in the year 1797, in reply to an affectionate address from the Grand Lodge of Massachusetts, he says: "My attachment to the Society of which we are members will dispose me always to contribute my best endeavors to promote the honor and prosperity of the Craft."

Five years before this letter was written, he had, in a communication to the same body, expressed his opinion of the Masonic Institution as one whose liberal principles are founded on the immutable laws of "truth and justice," and whose "grand object is to promote the happiness of the human race."

In answer to an address from the Grand Lodge of South Carolina in 1791, he says: "I recognize with pleasure my relation to the brethren of your Society," and "I shall be happy, on every occasion, to evince my regard for the Fraternity." And in the same letter he takes occasion to allude to the Masonic Institution as "an association whose principles lead to purity of morals, and are beneficial of action."

In writing to the officers and members of St. David's Lodge at Newport (R. I.), in the same year, he uses this language: "Being persuaded that a just application of the principles on which the Masonic fraternity is founded must be promotive of private virtue and public prosperity, I shall always be happy to advance the interests of the Society, and to be considered by them as a deserving brother."

And lastly, for I will not further extend these citations, in a letter addressed in November, 1798, only thirteen months before his death, to the Grand Lodge of Maryland he has made this explicit declaration of his opinion of the Institution:

"So far as I am acquainted with the doctrines and principles of Freemasonry, I conceive them to be founded in benevolence, and to be exercised only for the good of mankind. I cannot, therefore, upon this ground, withdraw my approbation from it."

So much has been said upon the Masonic career and opinions of Washington because American Masons love to dwell on the fact that the distinguished patriot, whose memory is so revered that his unostentatious grave on the banks of the Potomac has become the Mecca of America, was not only a brother of the Craft, but was ever ready to express his good opinion of the Society. They feel that under the panoply of his great name they may defy the malignant charges of their adversaries. They know that no better reply can be given to such charges than to say, in the language of Clinton, "Washington would not have encouraged an Institution hostile to morality, religion, good order, and the public welfare."

Watchwords. Used in the Thirty-second Degree of the Ancient and Accepted Scottish Rite because that degree has a military form, but not found in other degrees of Masonry.

Waterfall. Used in the Fellow-Craft's Degree as a symbol of plenty, for which the word *waterford* is sometimes improperly substituted. (See *Shibboleth*.)

Wayfaring Man. A term used in the legend of the Third Degree to denote the person met near the port of Joppa by certain persons sent out on a search by King Solomon. The part of the legend which introduces the wayfaring man, and his interview with the Fellow-Crafts, was probably introduced into the American system by Webb, or found by him in the older rituals practised in this country. It is not in the old English rituals of the last century, nor is the circumstance detailed in the present English lecture. A wayfaring man is defined by Phillips as "one accustomed to travel on the road." The expression is becoming obsolete in ordinary language, but it is preserved in Scripture—"he saw a wayfaring man in the street of the city" (Judges xix. 17)—and in Masonry, both of which still retain many words long since disused elsewhere.

Weary Sojourners. Spoken of in the American legend of the Royal Arch as three of the captives who had been restored to liberty by Cyrus, and, after sojourning or remaining longer in Babylon than the main body of their brethren, had at length repaired to Jerusalem to assist in rebuilding the Temple.

It was while the workmen were engaged in making the necessary excavations for laying the foundation, and while numbers continued

to arrive at Jerusalem from Babylon, that these three worn and weary sojourners, after plodding on foot over the rough and devious roads between the two cities, offered themselves to the Grand Council as willing participants in the labor of erection. Who these sojourners were, we have no historical means of discovering; but there is a Masonic tradition (entitled, perhaps, to but little weight) that they were Hananiah, Mishael, and Azariah, three holy men, who are better known to general readers by their Chaldaic names of Shadrach, Meshech, and Abed-nego, as having been miraculously preserved from the fiery furnace of Nebuchadnezzar.

Their services were accepted, and from their diligent labors resulted that important discovery, the perpetuation and preservation of which constitutes the great end and design of the Royal Arch Degree.

Such is the legend of the American Royal Arch. It has no known foundation in history, and is therefore altogether mythical. But it presents, as a myth, the symbolic idea of arduous and unfaltering search after truth, and the final reward that such devotion receives.

Webb-Preston Work. The title given by Dr. Robert Morris to a system of lectures which he proposed to introduce, in 1859, into the Lodges of the United States, and in which he was partly successful. He gave this name to his system because his theory was that the lectures of Thomas Smith Webb and those of Preston were identical. But this theory is untenable, for it has long since been shown that the lectures of Webb were an abridgment, and a very material modification of those of Preston. In 1863, and for a few years afterward, the question of the introduction of the "Webb-Preston work" was a subject of warm, and sometimes of intemperate, discussion in several of the Western jurisdictions. It has now, however, at least as a subject of controversy, ceased to attract the attention of the Craft. One favorable result was, however, produced by these discussions, and that is, that they led to a more careful investigation and a better understanding of the nature and history of the rituals which have, during the nineteenth century, been practised in America. The bitterness of feeling has passed away, but the knowledge that it elicited remains.

Webb, Thomas Smith. No name in Masonry is more familiar to the American Mason than that of Webb, who was really the inventor and founder of the system of work which, under the appropriate name of the American Rite (although often improperly called the York Rite), is universally practised in the United States. The most exhaustive biography of him that has been written is that of Bro. Cornelius Moore, in his *Leaflets of Masonic Biography*, and from that, with a few additions from other sources, the present sketch is derived.

Thomas Smith Webb, the son of parents who a few years previous to his birth had emigrated from England and settled in Boston, Massachusetts, was born in that city, October 13, 1771. He was educated in one of the public schools, where he acquired such knowledge as was at that time imparted in them, and became proficient in the French and Latin languages.

He selected as a profession either that of a printer or a bookbinder; his biographer is uncertain which, but inclines to think that it was the former. After completing his apprenticeship he removed to Keene, in New Hampshire, where he worked at his trade, and about the year 1792 (for the precise date is unknown) was initiated in Freemasonry in Rising Sun Lodge in that town.

While residing at Keene he married Miss Martha Hopkins, and shortly afterward removed to Albany, New York, where he opened a bookstore. When and where he received the high degrees has not been stated, but we find him, while living at Albany, engaged in the establishment of a Chapter and an Encampment.

It was at this early period of his life that Webb appears to have commenced his labors as a Masonic teacher, an office which he continued to fill with great influence until the close of his life. In 1797 he published at Albany the first edition of his *Freemasons' Monitor; or, Illustrations of Masonry*. It purports to be "by a Royal Arch Mason, K. T., K. M., etc." He did not claim the authorship until the subsequent edition; but his name and that of his partner, Spencer, appear in the imprint as publishers. He acknowledges in the preface his indebtedness to Preston for the observations on the first three degrees. But he states that he has differently arranged Preston's distributions of the sections, because they were "not agreeable to the mode of working in America." This proves that the Prestonian system was not then followed in the United States, and ought to be a sufficient answer to those who at a later period attempted to claim an identity between the lectures of Preston and Webb.

About the year 1801 he removed to Providence, Rhode Island, where he engaged in the manufacture of wall-paper on a rather extensive scale. By this time his reputation as a Masonic teacher had been well established, for a committee was appointed by St. John's Lodge of Providence to wait upon and inform him that this Lodge (for his great exertions in the cause of Masonry) "wish him to become a member of the same." He accepted the invitation, and passing through the various gradations of office was elected, in 1813, Grand Master of the Masons of Rhode Island.

But it is necessary now to recur to preceding events. In 1797, on October 24th, a convention of committees from several Chapters in the Northern States was held in Boston for the purpose of deliberating on the propriety and expediency of establishing a Grand Chapter of Royal Arch Masons for the Northern States. Of this convention

Webb was chosen as the chairman. Previous to this time the Royal Arch degrees had been conferred in Masters' Lodges and under a Lodge Warrant. It is undoubtedly to the influence of Webb that we are to attribute the disseverance of the degree from that jurisdiction and the establishment of independent Chapters. It was one of the first steps that he took in the organization of the American Rite. The circular addressed by the convention to the Chapters of the country was most probably from the pen of Webb.

The Grand Chapter having been organized in January, 1798, Webb was elected Grand Scribe, and reelected in 1799, at which time the body assumed the title of the General Grand Chapter. In 1806 he was promoted to the office of General Grand King, and in 1816 to that of Deputy General Grand High Priest, which he held until his death.

During all this time, Webb, although actively engaged in the labors of Masonic instruction, continued his interest in the manufacture of wall-paper, and in 1817 removed his machinery to the West, Moore thinks, with the intention of making his residence there.

In 1816 he visited the Western States, and remained there two years, during which time he appears to have been actively engaged in the organization of Chapters, Grand Chapters, and Encampments. It was during this visit that he established the Grand Chapters of Ohio and Kentucky, by virtue of his powers as a General Grand Officer.

In August, 1818, he left Ohio and returned to Boston. In the spring of 1819, he again began a visit to the West, but he reached no farther than Cleveland, Ohio, where he died very suddenly, it is supposed in a fit of apoplexy, on July 6, 1819, and was buried the next day with Masonic honors. The body was subsequently disinterred and conveyed to Providence, where, on the 8th of November, it was reinterred by the Grand Lodge of Rhode Island.

Webb's influence over the Masons of the United States, as the founder of a Rite, was altogether personal. In Masonic literature he has made no mark, for his labors as an author are confined to a single work, his *Monitor*, and this is little more than a syllabus of his lectures. Although, if we may judge by the introductory remarks to the various sections of the degrees, and especially to the second one of the Third Degree, Webb was but little acquainted with the true philosophical symbolism of Freemasonry, such as was taught by Hutchinson in England and by his contemporaries in this country, Harris and Town; he was what Carson properly calls him, "the ablest Masonic ritualist of his day—the very prince of Masonic workmen," and this was the instrument with which he worked for the extension of the new Rite which he established. The American Rite would have been more perfect as a system had its founder entertained profounder views of the philosophy and symbolism of Masonry as a science; but as it is, with imperfections which time, it is hoped, will remove, and deficiencies which future researches of the Masonic scholar will supply, it still must ever be a monument of the ritualistic skill, the devotion, and the persevering labor of Thomas Smith Webb.

The few odes and anthems composed by Webb for his rituals possess a high degree of poetic merit, and evince the possession of much genius in their author.

Wedekind, Georg Christian Gottlieb, Baron von. A German physician and Professor of Medicine at Metz, and a medical writer of reputation. He was born at Göttingen, January 8, 1761. As a Mason, he was distinguished as a member of the Eclectic Union, and labored effectually for the restoration of good feeling between it and the Directorial Lodge at Frankfort. His Masonic works, which are numerous, consist principally of addresses, controversial pamphlets, and contributions to the Altenburg *Journal of Freemasonry*. He died in 1831.

Weeping Virgin. The weeping virgin with disheveled hair, in the monument of the Third Degree, used in the American Rite, is interpreted as a symbol of grief for the unfinished state of the Temple. Jeremy Cross, who is said to have fabricated the monumental symbol, was not, we are satisfied, acquainted with Hermetic science. Yet a woman thus portrayed, standing near a tomb, was a very appropriate symbol for the Third Degree, whose dogma is the resurrection. In Hermetic science, according to Nicolas Flammel (*Hieroglyphica*, cap. xxxii.), a woman having her hair disheveled and standing near a tomb is a symbol of the soul.

Weishaupt, Adam. He is celebrated in the history of Masonry as the founder of the Order of Illuminati of Bavaria, among whom he adopted the characteristic or Order name of *Spartacus*. He was born February 6, 1748, at Ingoldstadt, and was educated by the Jesuits, toward whom, however, he afterward exhibited the bitterest enmity, and was equally hated by them in return. In 1772 he became Extraordinary Professor of Law, and in 1775, Professor of Natural and Canon Law, at the University of Ingoldstadt. As the professorship of canon law had been hitherto held only by an ecclesiastic, his appointment gave great offense to the clergy. Weishaupt, whose views were cosmopolitan, and who knew and condemned the bigotry and superstitions of the priests, established an opposing party in the University, consisting principally of young men whose confidence and friendship he had gained. They assembled in a private apartment, and there he discussed with them philosophic subjects, and sought to imbue them with a liberal spirit. This was the begin-

ning of the Order of the Illuminati, or the Enlightened—a name which he bestowed upon his disciples as a token of their advance in intelligence and moral progress.

At first, it was totally unconnected with Masonry, of which Order Weishaupt was not at that time a member. It was not until 1777 that he was initiated in the Lodge Theodore of Good Counsel, at Munich. Thenceforward Weishaupt sought to incorporate his system into that of Masonry, so that the latter might become subservient to his views, and with the assistance of the Baron Knigge, who brought his active energies and genius to the aid of the cause, he succeeded in completing his system of Illuminism. But the clergy, and especially the Jesuits, who, although their Order had been abolished by the government, still secretly possessed great power, redoubled their efforts to destroy their opponent, and they at length succeeded. In 1784, all secret associations were prohibited by a royal decree, and in the following year Weishaupt was deprived of his professorship and banished from the country. He repaired to Gotha, where he was kindly received by Duke Ernest, who made him a counselor and gave him a pension. There he remained until he died in 1811.

During his residence at Gotha he wrote and published many works, some on philosophical subjects and several in explanation and defense of Illuminism. Among the latter were *A Picture of the Illuminati*, 1786; *A Complete History of the Persecutions of the Illuminati in Bavaria*, 1786. Of this work only one volume was published; the second, though promised, never appeared. *An Apology for the Illuminati*, 1786; *An Improved System of the Illuminati*, 1787, and many others.

No man has ever been more abused and villified than Weishaupt by the adversaries of Freemasonry. In such partisan writers as Barruel and Robison we might expect to find libels against a Masonic reformer. But it is passing strange that Dr. Oliver should have permitted such a passage as the following to sully his pages (*Landmarks*, ii., 26):

"Weishaupt was a shameless libertine, who compassed the death of his sister-in-law to conceal his vices from the world and, as he termed it, to preserve his honor."

To charges like these, founded only in the bitterness of his persecutors, Weishaupt has made the following reply:

"The tenor of my life has been the opposite of everything that is vile; and no man can lay any such thing to my charge."

Indeed, his long continuance in an important religious professorship at Ingoldstadt, the warm affections of his pupils, and the patronage and protection, during the closing years of his life, of the virtuous and amiable Duke of Gotha, would seem to give some assurance that Weishaupt could not have been the monster that he has been painted by his adversaries.

Illuminism, it is true, had its abundant errors, and no one will regret its dissolution. But its founder had hoped by it to effect much good: that it was diverted from its original aim was the fault, not of him, but of some of his disciples; and their faults he was not reluctant to condemn in his writings.

His ambition was, I think, a virtuous one; that it failed was his, and perhaps the world's, misfortune. "My general plan," he says, "is good, though in the detail there may be faults. I had myself to create. In another situation, and in an active station in life, I should have been keenly occupied, and the founding of an Order would never have come into my head. But I would have executed much better things, if the government had not always opposed my exertions, and placed others in situations which suited my talents. It was the full conviction of this, and of what could be done, if every man were placed in the office for which he was fitted by nature, and a proper education, which first suggested to me the plan of Illuminism."

What he really wished Illuminism to be, we may judge from the instructions he gave as to the necessary qualifications of a candidate for initiation. They are as follows:

"Whoever does not close his ear to the lamentations of the miserable, nor his heart to gentle pity; whoever is the friend and brother of the unfortunate; whoever has a heart capable of love and friendship; whoever is steadfast in adversity, unwearied in the carrying out of whatever has been once engaged in, undaunted in the overcoming of difficulties; whoever does not mock and despise the weak; whose soul is susceptible of conceiving great designs, desirous of rising superior to all base motives, and of distinguishing itself by deeds of benevolence; whoever shuns idleness; whoever considers no knowledge as unessential which he may have the opportunity of acquiring, regarding the knowledge of mankind as his chief study; whoever, when truth and virtue are in question, despising the approbation of the multitude, is sufficiently courageous to follow the dictates of his own heart,—such a one is a proper candidate."

The Baron von Knigge, who, perhaps, of all men, best knew him, said of him that he was undeniably a man of genius, and a profound thinker; and that he was all the more worthy of admiration because, while subjected to the influences of a bigoted Catholic education, he had formed his mind by his own meditations, and the reading of good books. His heart, adds this companion of his labors and sharer of his secret thoughts, was excited by the most unselfish desire to do something great, and that would be worthy of mankind, and in the accomplishment of this he was deterred by no opposition and discouraged by no embarrassments.

The truth is, I think, that Weishaupt has

been misunderstood by Masonic and slandered by un-Masonic writers. His success in the beginning as a reformer was due to his own honest desire to do good. His failure in the end was attributable to ecclesiastical persecution, and to the faults and follies of his disciples. The master works to elevate human nature; the scholars, to degrade. Weishaupt's place in history should be among the unsuccessful reformers and not among the profligate adventurers.

Welcome. In the American ritual, it is said to be the duty of the Senior Deacon "to welcome and clothe all visiting brethren." That is to say, he is to receive them at the door with all courtesy and kindness, and to furnish them, or see that they are furnished, with the necessary apron and gloves and, if they are Past Masters, with the appropriate collar and jewel of that office, with an extra supply of which all Lodges were in the olden time supplied, but not now. He is to conduct the visitor to a seat, and thus carry out the spirit of the *Old Charges*, which especially inculcate hospitality to strange brethren. These customs are no longer practised and the ritual prescribes other well-known duties.

Well Formed, True, and Trusty. A formula used by the Grand Master at the laying of a corner-stone. Having applied the square, level, and plumb to its different surfaces and angles, he declares it to be "well formed, true, and trusty." Borrowed from the technical language of Operative Masonry, it is symbolically applied in reference to the character which the Entered Apprentice should sustain when, in the course of his initiation, he assumes the place of a typical corner-stone in the Lodge.

Wellington, Duke of. The "Hero of Waterloo," and the renowned, was initiated in Lodge No. 494, about December, 1790.

Wesley, Samuel. At one time the most distinguished organist of England, and called by Mendelssohn "the father of English organ-playing." He was initiated as a Mason December 17, 1788, and in 1812, the office of Grand Organist of the Grand Lodge of England being in that year first instituted, he received the appointment from the Grand Master, the Duke of Sussex, and held it until 1818. He composed the anthem performed at the union of the two Grand Lodges in 1813, and was the composer of many songs, g'ees, etc., for the use of the Craft. He was the son of the Rev. Charles Wesley, and nephew of the celebrated John Wesley, the founder of Methodism. Born February 24, 1766, at Bristol, England, and died October 11, 1837. He was well entitled to the epithet of the "Great Musician of Masonry."

West. Although the west, as one of the four cardinal points, holds an honorable position as the station of the Senior Warden, and of the pillar of Strength that supports the Lodge, yet, being the place of the sun's setting and opposed to the east, the recognized place of light, it, in Masonic symbolism, represents the place of darkness and ignorance. The old tradition, that in primeval times all human wisdom was confined to the eastern part of the world, and that those who had wandered toward the west were obliged to return to the east in search of the knowledge of their ancestors, is not confined to Masonry. Creuzer (*Symbolik*) speaks of an ancient and highly instructed body of priests in the East, from whom all knowledge, under the veil of symbols, was communicated to the Greeks and other unenlightened nations of the West. And in the "Legend of the Craft," contained in the old Masonic Constitutions, there is always a reference to the emigration of the Masons from Egypt eastward to the "land of behest," or Jerusalem. Hence, in the modern symbolism of Speculative Masonry, it is said that the Mason during his advancement is *traveling from the West to the East in search of light*.

"Westminster and Keystone." The third of the three oldest warranted Lodges in England, having been chartered in 1722. The first is Fr endship, No. 6, and the second the British, No. 8. Those assembling *without warrants* are only two, and are numbered two and four, "Antiquity" and "Royal Somerset House and Inverness."

Westphalia, Secret Tribunals of. The Vehmgerichte, or Fehmgerichte, were secret criminal courts of Westphalia in the Middle Ages. The origin of this institution, like that of Masonry, has been involved in uncertainty. The true meaning of the name even is doubtful. *Vaem* is said by Dreyer to signify *holy* in the old Northern languages; and, if this be true, a Fehmgericht would mean a holy court. But it has also been suggested that the word comes from the Latin *fama*, or rumor, and that a Fehmgericht was so called because it proceeded to the trial of persons whose only accuser was common rumor, the maxim of the German law, "no accuser, no judge," being in such a case departed from. They were also called Tribunals of Westphalia, because their jurisdiction and existence were confined to that country.

The Medieval Westphalia was situated within the limits of the country bounded on the west by the Rhine, on the east by the Weser, on the north by Friesland, and on the south by Westerwald. Render (*Tour through Germany*, p. 186) says that the tribunals were only to be found in the duchies of Gueldres, Cleves, and Westphalia, in the principal cities of Corvey and Minden, in the landgravate of Hesse, in the counties of Bentheim, Limburg, Lippe, Mark, Ravensberg, Rechlinghausen, Rietzberg, Sayn, Waldeck, and Steinfort, in some baronies, as Gehmen, Neustadt, and Rheda, and in the free imperial city of Dortmund; but these were all included within the limits of Medieval Westphalia.

It has been supposed that the first secret tribunals were established by the Emperor Charlemagne on the conquest of Saxony. In 803 the Saxons obtained among other privileges that of retaining their national laws, and administering them under imperial judges who

had been created Counts of the Empire. Their courts, it is said, were held three times a year in an open field, and their sessions were held in public on ordinary occasions; but in all cases of religious offense, such as apostasy, heresy, or sacrilege, although the trial began in a public session, it always ended in a secret tribunal.

It has been supposed by some writers that these courts of the Counts of the Empire instituted by Charlemagne gave origin to the secret tribunals of Westphalia, which were held in the thirteenth and fourteenth centuries. There is no external evidence of the truth of this hypothesis. It was, however, the current opinion of the time, and all the earlier traditions and documents of the courts themselves trace their origin to Charlemagne. Paul Wigand, the German jurist and historian, who wrote a history of their tribunals (*Fehmgericht Westfälens*, Hamburg, 1826), contends for the truth of these traditions; and Sir Francis Palgrave, in his *Rise and Progress of the English Commonwealth*, says, unhesitatingly, that "the Vehmic tribunals can only be considered as the original jurisdictions of the old Saxons which survived the subjugation of their country." The silence on this subject in the laws and capitularies of Charlemagne has been explained on the ground that these tribunals were not established authoritatively by that monarch, but only permitted by a tacit sanction to exist.

The author of the article on the Secret Societies of the Middle Ages, published in the *Library of Entertaining Knowledge*, who has written somewhat exhaustively on this subject, says that the first writers who have mentioned these tribunals are Henry of Hervorden in the fourteenth, and Æneas Sylvius in the fifteenth century; both of whom, however, trace them to the time of Charlemagne; but Jacob (*Recherches Historiques sur les Croisades et les Templiers*, p. 132) cites a diploma of Count Engelbert de la Mark, of the date of 1267, in which there is an evident allusion to some of their usages. Render says that they are first generally known in the year 1220. But their absolute historical existence is confined to the fourteenth and fifteenth centuries.

The secret Westphalian tribunals were apparently created for the purpose of preserving public morals, of punishing crime, and of protecting the poor and weak from the oppressions of the rich and powerful. They were outside of the regular courts of the country, and in this respect may be compared to the modern "vigilance committees" sometimes instituted in this country for the protection of the well-disposed citizens in newly settled territories from the annoyance of lawless men. But the German tribunals differed from the American committees in this, that they were recognized by the emperors, and that their decisions and executions partook of a judicial character.

The Vehmic tribunals, as they are also called, were governed by a minute system of regulations, the strict observance of which preserved their power and influence for at least two centuries.

At the head of the institution was the Emperor, for in Germany he was recognized as the source of law. His connection with the association was either direct or indirect. If he had been initiated into it, as was usually the case, then his connection was direct and immediate. If, however, he was not an initiate, then his powers were delegated to a lieutenant, who was a member of the tribunal.

Next to the Emperor came the free counts. Free counties were certain districts comprehending several parishes, where the judges and counselors of the secret ban exercised jurisdiction in conformity with the statutes. The free count, who was called *Stuhlherr*, or tribunal lord, presided over this free county and the tribunal held within it. He had also the prerogative of erecting other tribunals within his territorial limits, and if he did not preside in person, he appointed a *Freigraf*, or free judge, to supply his place. No one could be invested with the dignity of a free judge unless he were a Westphalian by birth, born in lawful wedlock of honest parents; of good repute, charged with no crime, and well qualified to preside over the county. They derived their name of free judges from the fact that the tribunals exercised their jurisdiction over only free men, serfs being left to the control of their own lords.

Next in rank to the free judges were the *Schöppen*, as assessors or counselors. They formed the main body of the association, and were nominated by the free judge, with the consent of the stuhlherr, and vouched for by two members of the tribunal. A schöppe was required to be a Christian, a Westphalian of honest birth, neither excommunicated nor outlawed, nor involved in any suit before the Fehmgericht, and not a member of any monastic or ecclesiastical order. There were two classes of these assessors or schöppen: a lower class or grade called the *Ignorant*, who had not been initiated, and were consequently not permitted to be present at the secret session; and a higher grade, called the *Knowing*, who were subjected to a form of initiation.

The ceremonies of initiation of a free judge were very solemn and symbolic. The candidate appeared bareheaded before the tribunal, and answered certain questions respecting his qualifications. Then, kneeling, with the thumb and forefinger of the right hand on a naked sword and halter, he pronounced the following oath: "I swear by the Holy Trinity that I will, from henceforth, aid, keep, and conceal the holy Fehms from wife and child, from father and mother, from sister and brother, from fire and wind, from all that the sun shines on and the rain covers, from all that is between sky and earth, especially from the man who knows the law; and will bring before this free tribunal, under which I am sitting, all that belongs to the secret jurisdiction of the Emperor, whether I know it to be true myself or have heard it from trustworthy men, whatever requires correction or punishment

whatever is committed within the jurisdiction of the Fehm, that it may be judged, or, with the consent of the accuser, be put off in grace; and will not cease so to do for love or for fear, for gold or for silver, or for precious stones; and will strengthen this tribunal and jurisdiction with all my five senses and power; and that I do not take on me this office for any other cause than for the sake of right and justice. Moreover, that I will ever advance and honor this free tribunal more than any other free tribunals; and what I thus promise will I steadfastly and firmly keep; so help me God and his Holy Gospel."

He further swore in an additional oath that he would, to the best of his ability, enlarge the holy empire, and would undertake nothing with unrighteous hand against the land and people of the *Stuhlherr*, or Lord of the Tribunal. His name was then inserted in the Book of Gold.

The secrets of the tribunal were then communicated to the candidate, and with them the modes of recognition by which he could be enabled to discover his fellow-members. The sign is described as having been made by placing, when at table, the point of their knife pointing to themselves, and the haft away from them. This was also accompanied by the words *Stock Stein, Gras Grein*, the meaning of which phrase is unknown.

The duties of the initiated were to act as assessors or judges at the meetings of the courts, to constitute which at least seven were required to be present; and also to go through the country, serve citations upon the accused, and to execute the sentences of the tribunals upon criminals, as well as to trace out and denounce all evil-doers. The punishment of an initiate who had betrayed any of the secrets of the society was severe. His tongue was torn out by the roots, and he was then hung on a tree seven feet higher than any other felon.

The ceremonies practised when a Fehm court was held were very symbolic in their character. Before the free count stood a table, on which were placed a naked sword and a cord of withe. The sword, which was cross-handled, is explained in their ritual as signifying the cross on which Christ suffered for our sins, and the cord the punishment of the wicked. All had their heads uncovered, to signify that they would proceed openly and fairly, punish in proportion to guilt, and cover no right with a wrong. Their hands also were uncovered, to show that they would do nothing covertly and underhand; and they wore cloaks, to signify their warm love for justice, for as the cloak covers all the other garments and the body, so should their love cover justice. Lastly, they were to wear neither armor nor weapons, that no one might feel fear, and to indicate that they were under the peace of the empire. They were charged to be cool and sober, lest passion or intoxication should lead them to pass an unjust judgment.

Writers of romance have clothed these tribunals with additional mystery. But the stories that they were held at night, and in subterranean places, have no foundation save in the imagination of those who have invented them. They were held, like other German courts, at break of day and in the open air, generally beneath a tree in the forest, or elsewhere. The public tribunals were, of course, open to all. It was the secret ones only that were held in private. But the time and place were made known to the accused in the notification left at his residence, or, if that were unknown, as in the case of a vagabond, at a place where four roads met, being affixed to the ground or to a tree, and the knowledge might be easily communicated by him to his friends.

The Chapter-General met once a year, generally at Dortmund or Arensburg, but always at some place in Westphalia. It consisted of the tribunal lords and free counts, who were convoked by the Emperor or his lieutenant. If the Emperor was an initiate, he might preside in person; if he was not, he was represented by his lieutenant. At these Chapters the proceedings of the various Fehm courts were reviewed, and hence these latter made a return of the names of the persons initiated, the suits they had commenced, the sentences they had passed, and the punishments they had inflicted. The Chapter-General acted also as a court of appeals. In fact, the relation of a Chapter-General to the Fehm courts was precisely the same as that of a Grand Lodge of Masons to its subordinates. The resemblance, too, in the symbolic character of the two institutions was striking. But here the resemblance ended, for it has never been contended that there was or could be any connection whatever between the two institutions. But the coincidences show that peculiar spirit and love of mystery which prevailed in those times, and the influence of which was felt in Masonry as well as in the Westphalian tribunals, and all the other secret societies of the Middle Ages.

The crimes of which the Fehmgericht claimed a jurisdiction were, according to the statutes passed at Arensburg in 1490, of two kinds: those cognizant by the secret tribunal, and those cognizant by the public tribunal. The crimes cognizant by the secret tribunal were, violations of the secrets of Charlemagne and of the Fehmgericht, heresy, apostasy, perjury, and witchcraft or magic. Those cognizant by the public tribunal were, sacrilege, theft, rape, robbery of women in childbirth, treason, highway robbery, murder or manslaughter, and vagrancy. Sometimes the catalogue of crimes was modified and often enlarged. There was one period when all the crimes mentioned in the decalogue were included; and indeed there was no positive restriction of the jurisdiction of the tribunals, which generally were governed in their proceedings by what they deemed expedient for the public peace and safety.

In the early history of the institution, its trials were conducted with impartiality, and its judgments rendered in accordance with justice, being constantly restrained by mercy, so

that they were considered by the populace as being of great advantage in those times of lawlessness. But at length the institution became corrupt, and often aided instead of checking oppression, a change which finally led to its decay.

When anyone was accused, he was summoned to appear before the tribunal at a certain specified time and place. If he was an initiate, the summons was repeated three times; but if not, that is, if any other than an inhabitant of Westphalia, the summons was given only once. If he appeared, an opportunity was afforded him of defense. An initiate could purge himself by a simple oath of denial, but any other person was required to adduce sufficient testimony of his innocence. If the accused did not appear, nor render a satisfactory excuse for his absence, the court proceeded to declare him outlawed, and a free judge was delegated to put him to death wherever found. Where three free judges found anyone *flagrante delicto*, or in the very act of committing a crime, or having just perpetrated it, they were authorized to put him to death without the formality of a trial. But if he succeeded in making his escape before the penalty was inflicted, he could not on a subsequent arrest be put to death. His case must then be brought for trial before a tribunal.

The sentence of the court, if capital, was not announced to the criminal, and he learned it only when, in some secret place, the executioners of the decree of the Fehmgericht met him and placed the halter around his neck and suspended him to a neighboring tree. The punishment of death was always by hanging, and from a tree. The fact that a dead body was thus found in the forest, was an intimation to those who found it that the person had died by the judgment of the secret tribunal.

It is very evident that an institution like this could be justified, or even tolerated, only in a country and at a time when the power and vices of the nobles, and the general disorganization of society, had rendered the law itself powerless; and when in the hands of persons of irreproachable character, the weak could only thus be protected from the oppressions of the strong, the virtuous from the aggression of the vicious. It was in its commencement a safeguard for society; and hence it became so popular that its initiates numbered at one time over one hundred thousand, and men of rank and influence sought with avidity admission into its circle.

In time the institution became demoralized. Purity of character was no longer insisted on as a qualification for admission. Its decrees and judgments were no longer marked with unfaltering justice, and, instead of defending the weak any longer from the oppressor, it often became itself the willing instrument of oppression Efforts were made from time to time to inaugurate reforms, but the prevailing spirit of the age, now beginning to be greatly improved by the introduction of the Roman law and the spread of the Protestant religion, was opposed to the self-constituted authority of the tribunals. They began to dissolve almost insensibly, and after the close of the sixteenth century we hear no more of them, although there never was any positive decree of dissolution enacted or promulgated by the State. They were destroyed, not by any edict of law, but by the progressive spirit of the people.

West Virginia. Originally, all the Lodges in the western part of Virginia were under the jurisdiction of the Grand Lodge of that State. But the new State of West Virginia having been formed in 1863, nine Lodges sent delegates to a convention held at Fairmont, April 12, 1865, which, after some discussion, adjourned to meet again on May 10th of the same year, when the Grand Lodge of West Virginia was organized, and W. J. Bates elected Grand Master.

The Grand Chapter of Royal Arch Masons of West Virginia was organized, November 16, 1871, by a convention of five Chapters. The Grand Chapter of Virginia, under which these Chapters held their Warrants, had previously given its consent to the organization.

Wheat. An emblem of plenty under the name of "Corn." (See *Corn, Wine, and Oil.*)

White. White is one of the most ancient as well as most extensively diffused of the symbolic colors. It is to be found in all the ancient mysteries, where it constituted, as it does in Masonry, the investiture of the candidate. It always, however, and everywhere has borne the same signification as the symbol of purity and innocence.

In the religious observances of the Hebrews, white was the color of one of the curtains of the tabernacle, where, according to Josephus, it was a symbol of the element of earth; and it was employed in the construction of the ephod of the high priest, of his girdle, and of the breastplate. The word לָבַן, *laban*, which in the Hebrew language signifies "to make white," also denotes "to purify"; and there are to be found throughout the Scriptures many allusions to the color as an emblem of purity. "Though thy sins be as scarlet," says Isaiah, "they shall be as white as snow." Jeremiah, describing the once innocent condition of Zion, says, "her Nazarites were purer than snow, they were whiter than milk." "Many," says Daniel, "shall be purified and made white." In Revelation, a *white stone* was the reward promised by the Spirit to those who overcame; and again, "he that overcometh, the same shall be clothed in white garments"; and in another part of the same book the Apostle is instructed to say that fine linen, clean and white, is the righteousness of the saints. The ancient prophets always imagined the Deity clothed in white, because, says Portal (*Des Couleurs Symboliques*, p. 35), "white is the color of absolute truth, of Him who is; it alone reflects all the luminous rays; it is the unity whence all the primitive colors emanate." Thus Daniel, in one of his prophetic visions, saw the Ancient of days, "whose garment was white as snow, and the hair of his head like pure wool." Here, says Dr. Henry (*Comm. in*

loco), the whiteness of the garment "noted the splendor and purity of God in all the administrations of his justice."

Among the Gentile nations, the same reverence was paid to this color. The Egyptians decorated the head of their deity, Osiris, with a white tiara. In the school of Pythagoras, the sacred hymns were chanted in white robes. The Druids clothed their initiates who had arrived at the ultimate degree, or that of perfection, in white vestments. In all the mysteries of other nations of antiquity, the same custom was observed. White was, in general, the garment of the Gentile as well as of the Hebrew priests in the performance of their sacred rites. As the Divine power was supposed to be represented on earth by the priesthood, in all nations the sovereign pontiff was clad in white. Aaron was directed to enter the sanctuary only in white garments; in Persia, the Magi wore white robes, because, as they said, they alone were pleasing to the Deity; and the white tunic of Ormuzd is still the characteristic garment of the modern Parsees.

White, among the ancients, was consecrated to the dead, because it was the symbol of the regeneration of the soul. On the monuments of Thebes the manes or ghosts are represented as clothed in white; the Egyptians wrapped their dead in white linen; Homer (*Iliad*, xviii., 353) refers to the same custom when he makes the attendants cover the dead body of Patroclus, φάρεϊ λευκῷ, with a white pall; and Pausanias tells us that the Messenians practised the same customs, clothing their dead in white, and placing crowns upon their heads, indicating by this double symbolism the triumph of the soul over the empire of death.

The Hebrews had the same usage. St. Matthew (xxvii. 59) tells us that Joseph of Arimathea wrapped the dead body of our Lord "in a clean linen cloth." Adopting this as a suggestion, Christian artists have, in their paintings of the Savior after his resurrection, depicted him in a white robe. And it is with this idea that in the Apocalypse white vestments are said to be the symbols of the regeneration of souls, and the reward of the elect. It is this consecration of white to the dead that caused it to be adopted as the color of mourning among the nations of antiquity. As the victor in the games was clothed in white, so the same color became the symbol of the victory achieved by the departed in the last combat of the soul with death. "The friends of the deceased wore," says Plutarch, "his livery, in commemoration of his triumph." The modern mourning in black is less philosophic and less symbolic than this ancient one in white.

In Speculative Masonry, white is the symbol of purity. This symbolism commences at the earliest point of initiation, when the white apron is presented to the candidate as a symbol of purity of life and rectitude of conduct. Wherever in any of the subsequent initiations this color appears, it is always to be interpreted as symbolizing the same idea. In the Thirty-third Degree of the Ancient and Accepted Scottish Rite, the Sovereign Inspector is invested with a white scarf as inculcating that virtuous deportment above the tongue of all reproach which should distinguish the possessors of that degree, the highest in the Rite.

This symbolism of purity was most probably derived by the Masons from that of the primitive church, where a white garment was placed on the catechumen who was about to be baptized, as a token that he had put off the lusts of the flesh, and, being cleansed from his former sins, had obliged himself to maintain an unspotted life. The ancient symbolism of regeneration which appertained to the ancient idea of the color white has not been adopted in Masonry; and yet it would be highly appropriate in an Institution one of whose chief dogmas is the resurrection.

White Ball. In Freemasonry, equivalent to a favorable or affirmative vote. The custom of using white and black balls seems to have been derived from the Romans, who in the earlier days of the republic used white and black balls in their judicial trials, which were cast into an urn, the former acquitting and the latter condemning the accused.

White Cross Knights. A title sometimes applied to the Knights Hospitalers of St. John, from the color of their cross. Porter (*Hist. Knts. of Malta*, i., 166) says: "Villiers hastily assembled a troop of *White Cross Knights*, and, issuing from the city by a side gate, made a circuit so as, if possible, to fall upon the flank of the foe unperceived."

White Mantle, Order of the. The Teutonic Knights were so denominated in allusion to the color of their cloaks, on which they bore a black cross.

White Masonry. (*Maçonnerie blanche.*) A title given by French writers to Female Masonry, or the Masonry of Adoption.

White Stone. A symbol in the Mark Degree referring to the passage in the Apocalypse (ii. 17): "To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth, saving he that receiveth it." In this passage it is supposed that the Evangelist alluded to the stones or tesserae which, among the ancients and the early Christians, were used as tokens of alliance and friendship. Hence in the Mark Degree, the white stone and the new name inscribed upon it is a symbol of the covenant made between the possessors of the degree, which will in all future time, and under every circumstance of danger or distress, secure the kind and fraternal assistance of all upon whom the same token has been bestowed. In the symbolism of the degree the candidate represents that white stone upon whom the new name as a Mark Master is to be inscribed. (See *Mark* and *Tessera Hospitalis.*)

White, William Henry. Distinguished for his services to the Craft of England, whom he served as Grand Secretary for the long period of forty-seven years. He was the son

of William White, who was also Grand Secretary of the Grand Lodge of England for thirty-two years, the office having thus been held by father and son for seventy-nine years. William Henry White was born in 1778. On April 15, 1799, he was initiated in Emulation Lodge, No. 12, now called the Lodge of Emulation, No. 21, having been nominated by his father. December 15, 1800, he was elected Master of the Lodge, and presided until 1809. In 1805 he was appointed a Grand Steward, and in 1810 Grand Secretary, as the assistant of his father. This office was held by them conjointly for three years. In 1813, at the union of the two Grand Lodges, he was appointed, with Edwards Harper, Joint Grand Secretary of the United Grand Lodge of England, and in 1838 sole Grand Secretary. In 1857, after a service of nearly half a century, he retired from the office, the Grand Lodge unanimously voting him a retiring pension equal in amount to his salary. On that occasion the Earl of Zetland, Grand Master, said: "I know of no one, and I believe there never was anyone who has done more, who has rendered more valuable services to Masonry than our worthy Brother White." In view of the great names in Masonic literature and labor which preceded him, the eulogium will be deemed exaggerated; but the devotion of the Grand Secretary to the Order, and his valuable services during his long and active life, cannot be denied. During the latter years of his official term, he was charged with inactivity and neglect of duty, but the fault has been properly attributed to the increasing infirmities of age. A service of plate was presented to him by the Craft, June 20, 1850, as a testimonial of esteem. He died April 5, 1866.

Widow, Sons of the. A society founded in the third century, by a Persian slave, Manes, who had been purchased and adopted by a widow. It consisted of two degrees, Auditor and Elut.

Widow's Son. In Ancient Craft Masonry, the title applied to Hiram, the architect of the Temple, because he is said, in the 1st Book of Kings (vii. 14), to have been "a widow's son of the tribe of Naphtali." The Adonhiramite Masons have a tradition which Chapron gives (*Necessaire Maçonn.*, p. 101) in the following words: "The Masons call themselves the widow's sons, because, after the death of our respectable Master, the Masons took care of his mother, whose children they called themselves, because Adonhiram had always considered them as his brethren. But the French Masons subsequently changed the myth and called themselves 'Sons of the Widow,' and for this reason. 'As the wife of Hiram remained a widow after her husband was murdered, the Masons, who regard themselves as the descendants of Hiram, called themselves *Sons of the Widow.*'" But this myth is a pure invention, and is without the Scriptural foundation of the York myth, which makes Hiram himself the widow's son. But in French Masonry the term "Son of the Widow" is synonymous with "Mason."

The adherents of the exiled house of Stuart, when seeking to organize a system of political Masonry by which they hoped to secure the restoration of the family to the throne of England, transferred to Charles II. the tradition of Hiram Abif betrayed by his followers, and called him "the Widow's Son," because he was the son of Henrietta Maria, the widow of Charles I. For the same reason they subsequently applied the phrase to his brother, James II.

Wife and Daughter, Mason's. See *Mason's Wife and Daughter.*

Wilhelmsbad, Congress of. At Wilhelmsbad, near the city of Hanau in Hesse-Cassel, was held the most important Masonic Congress of the eighteenth century. It was convoked by Ferdinand, Duke of Brunswick, Grand Master of the Order of Strict Observance, and was opened July 16, 1782. Its duration extended to thirty sessions, and in its discussions the most distinguished Masons of Germany were engaged. Neither the Grand Lodge of Germany, nor that of Sweden, was represented; and the Grand Lodge of the Three Globes, at Berlin, sent only a letter: but there were delegates from Upper and Lower Germany, from Holland, Russia, Italy, France, and Austria; and the Order of the Illuminati was represented by the Baron von Knigge. It is not therefore surprising that the most heterogeneous opinions were expressed. Its avowed object was the reform of the Masonic system, and its disentanglement from the confused mass of rites and high degrees with which French and German pretenders or enthusiasts had been for years past overwhelming it. Important topics were proposed, such as the true origin of Speculative Masonry, whether it was merely conventional and the result of modern thought, or whether it was the offspring of a more ancient order, and, if so, what was that order; whether there were any Superiors General then existing, and who these Unknown Superiors were, etc. These and kindred questions were thoroughly discussed, but not defined, and the Congress was eventually closed without coming to any other positive determination than that Freemasonry was not essentially connected with Templarism, and that, contrary to the doctrine of the Rite of Strict Observance, the Freemasons were not the successors of the Knights Templar. The real effect of the Congress of Wilhelmsbad was the abolition of that Rite, which soon after drooped and died.

Will. In some of the continental Rites, and in certain high degrees, it is a custom to require the recipiendary to make, before his initiation, a will and testament, exhibiting what are his desires as to the distribution of his property at his decease. The object seems to be to add solemnity to the ceremony, and to impress the candidate with the thought of death. But it would seem to be a custom which would be "more honored in the breach than the observance." It is not practised in the York and American Rites.

William, Emperor of Germany. An honorary member of the Grand Lodge of Scotland and protector of Freemasonry in Germany, his son, the crown prince, being deputy-protector.

Wilson Manuscript. In the marginal notes to the *Manifesto of the Lodge of Antiquity*, published in 1778, there is reference to an "O. [*old or original*] MS. in the hands of Mr. Wilson of Broomhead, near Sheffield, Yorkshire, written in the reign of King Henry VIII." It seems, from the context, to have been cited as authority for the existence of a General Assembly of the Craft at the city of York. But no part of the MS. has ever been printed or transcribed, and it is now apparently lost.

Winding Stairs. In the 1st Book of Kings (vi. 8) it is said: "The door for the middle chamber was in the right side of the house; and they went up with winding stairs into the middle chamber, and out of the middle into the third." From this passage the Masons of the last century adopted the symbol of the winding stairs, and introduced it into the Fellow-Craft's Degree, where it has ever since remained, in the American Rite. In one of the high degrees of the Scottish Rite the winding stairs are called *cochleus*, which is a corruption of *cochlis*, a spiral staircase. The Hebrew word is *lulim*, from the obsolete root *lul*, to roll or wind. The whole story of the winding stairs in the Second Degree of Masonry is a mere myth, without any other foundation than the slight allusion in the Book of Kings which has been just cited, and it derives its only value from the symbolism taught in its legend. (See *Middle Chamber* and *Winding Stairs, Legend of the.*)

Winding Stairs, Legend of the. I formerly so fully investigated the true meaning of the legend of the winding stairs, as taught in the degree of Fellow-Craft, that I can now find nothing to add to what I have already said in my work on *The Symbolism of Freemasonry*, published in 1869. I might, in writing a new article, change the language, but I could furnish no new idea. I shall not, therefore, hesitate to transfer much of what I have said on this subject in that work to the present article. It is an enlargement and development of the meager explanations given in the ordinary lecture of Webb.

In an investigation of the symbolism of the winding stairs, we shall be directed to the true explanation by a reference to their origin, their number, the objects which they recall, and their termination, but above all by a consideration of the great design which an ascent upon them was intended to accomplish.

The steps of this winding staircase commenced, we are informed, at the porch of the Temple; that is to say, at its very entrance. But nothing is more undoubted in the science of Masonic symbolism than that the Temple was the representative of the world purified by the Shekinah, or the Divine Presence. The world of the profane is without the Temple; the world of the initiated is within its sacred walls. Hence to enter the Temple, to pass within the porch, to be made a Mason, and to be born into the world of Masonic light, are all synonymous and convertible terms. Here, then, the symbolism of the winding stairs begins.

The Apprentice, having entered within the porch of the Temple, has begun his Masonic life. But the First Degree in Masonry, like the lesser mysteries of the ancient systems of initiation, is only a preparation and purification for something higher. The Entered Apprentice is the child in Masonry. The lessons which he receives are simply intended to cleanse the heart and prepare the recipient for that mental illumination which is to be given in the succeeding degrees.

As a Fellow-Craft, he has advanced another step, and as the degree is emblematic of youth, so it is here that the intellectual education of the candidate begins. And therefore, here, at the very spot which separates the porch from the sanctuary, where childhood ends and manhood begins, he finds stretching out before him a winding stair which invites him, as it were, to ascend, and which, as the symbol of discipline and instruction, teaches him that here must commence his Masonic labor—here he must enter upon those glorious though difficult researches the end of which is to be the possession of Divine truth. The winding stairs begin after the candidate has passed within the porch and between the pillars of strength and establishment, as a significant symbol to teach him that as soon as he has passed beyond the years of irrational childhood, and commenced his entrance upon manly life, the laborious task of self-improvement is the first duty that is placed before him. He cannot stand still, if he would be worthy of his vocation; his destiny as an immortal being requires him to ascend, step by step, until he has reached the summit, where the treasures of knowledge await him.

The number of these steps in all the systems has been odd. Vitruvius remarks—and the coincidence is at least curious—that the ancient temples were always ascended by an odd number of steps; and he assigns as the reason, that, commencing with the right foot at the bottom, the worshiper would find the same foot foremost when he entered the Temple, which was considered as a fortunate omen. But the fact is, that the symbolism of numbers was borrowed by the Masons from Pythagoras, in whose system of philosophy it plays an important part, and in which odd numbers were considered as more perfect than even ones. Hence, throughout the Masonic system we find a predominance of odd numbers; and while three, five, seven, nine, fifteen, and twenty-seven, are all-important symbols, we seldom find a reference to two, four, six, eight, or ten. The odd number of the stairs was therefore intended to symbolize the idea of perfection, to which it was the object of the aspirant to attain.

As to the particular number of the stairs, this has varied at different periods. Tracing-boards of the last century have been found, in

which only *five* steps are delineated, and others in which they amount to *seven*. The Prestonian lectures, used in England in the beginning of this century, gave the whole number as thirty-eight, dividing them into series of one, three, five, seven, nine, and eleven. The error of making an even number, which was a violation of the Pythagorean principle of odd numbers as the symbol of perfection, was corrected in the Hemming lectures, adopted at the union of the two Grand Lodges of England, by striking out the eleven, which was also objectionable as receiving a sectarian explanation. In this country the number was still further reduced to *fifteen*, divided into three series of *three*, *five*, and *seven*. I shall adopt this American division in explaining the symbolism; although, after all, the particular number of the steps, or the peculiar method of their division into series, will not in any way affect the general symbolism of the whole legend.

The candidate, then, in the Second Degree of Masonry, represents a man starting forth on the journey of life, with the great task before him of self-improvement. For the faithful performance of this task, a reward is promised, which reward consists in the development of all his intellectual faculties, the moral and spiritual elevation of his character, and the acquisition of truth and knowledge. Now, the attainment of this moral and intellectual condition supposes an elevation of character, an ascent from a lower to a higher life, and a passage of toil and difficulty, through rudimentary instruction, to the full fruition of wisdom. This is therefore beautifully symbolized by the winding stairs, at whose foot the aspirant stands ready to climb the toilsome steep, while at its top is placed "that hieroglyphic bright which none but Craftsmen ever saw," as the emblem of Divine truth. And hence a distinguished writer has said that "these steps, like all the Masonic symbols, are illustrative of discipline and doctrine, as well as of natural, mathematical, and metaphysical science, and open to us an extensive range of moral and speculative inquiry."

The candidate, incited by the love of virtue and the desire of knowledge, and withal eager for the reward of truth which is set before him, begins at once the toilsome ascent. At each division he pauses to gather instruction from the symbolism which these divisions present to his attention.

At the first pause which he makes he is instructed in the peculiar organization of the order of which he has become a disciple. But the information here given, if taken in its naked, literal sense, is barren, and unworthy of his labor. The rank of the officers who govern, and the names of the degrees which constitute the Institution, can give him no knowledge which he has not before possessed. We must look therefore to the symbolic meaning of these allusions for any value which may be attached to this part of the ceremony.

The reference to the organization of the Masonic Institution is intended to remind the aspirant of the union of men in society, and the development of the social state out of the state of nature. He is thus reminded, in the very outset of his journey, of the blessings which arise from civilization, and of the fruits of virtue and knowledge which are derived from that condition. Masonry itself is the result of civilization; while, in grateful return, it has been one of the most important means of extending that condition of mankind.

All the monuments of antiquity that the ravages of time have left, combine to prove that man had no sooner emerged from the savage into the social state, than he commenced the organization of religious mysteries, and the separation, by a sort of Divine instinct, of the sacred from the profane. Then came the invention of architecture as a means of providing convenient dwellings and necessary shelter from the inclemencies and vicissitudes of the seasons, with all the mechanical arts connected with it; and lastly, geometry, as a necessary science to enable the cultivators of land to measure and designate the limits of their possessions. All these are claimed as peculiar characteristics of Speculative Masonry, which may be considered as the type of civilization, the former bearing the same relation to the profane world as the latter does to the savage state. Hence we at once see the fitness of the symbolism which commences the aspirant's upward progress in the cultivation of knowledge and the search after truth, by recalling to his mind the condition of civilization and the social union of mankind as necessary preparations for the attainment of these objects. In the allusions to the officers of a Lodge, and the degrees of Masonry as explanatory of the organization of our own society, we clothe in our symbolic language the history of the organization of society.

Advancing in his progress, the candidate is invited to contemplate another series of instructions. The human senses, as the appropriate channels through which we receive all our ideas of perception, and which, therefore, constitute the most important sources of our knowledge, are here referred to as a symbol of intellectual cultivation. Architecture, as the most important of the arts which conduce to the comfort of mankind, is also alluded to here, not simply because it is so closely connected with the operative institution of Masonry, but also as the type of all the other useful arts. In his second pause, in the ascent of the winding stairs, the aspirant is therefore reminded of the necessity of cultivating practical knowledge.

So far, then, the instructions he has received relate to his own condition in society as a member of the great social compact, and to his means of becoming, by a knowledge of the arts of practical life, a necessary and useful member of that society.

But his motto will be, "Excelsior." Still must he go onward and forward. The stair is still before him; its summit is not yet reached, and still further treasures of wisdom are to be sought for, or the reward will not be

gained, nor the *middle chamber*, the abiding-place of truth, be reached

In his third pause, he therefore arrives at that point in which the whole circle of human science is to be explained. Symbols, we know, are in themselves arbitrary and of conventional signification, and the complete circle of human science might have been as well symbolized by any other sign or series of doctrines as by the seven liberal arts and sciences. But Masonry is an institution of the olden time; and this selection of the liberal arts and sciences as a symbol of the completion of human learning is one of the most pregnant evidences that we have of its antiquity.

In the seventh century, and for a long time afterward, the circle of instruction to which all the learning of the most eminent schools and most distinguished philosophers was confined, was limited to what were then called the liberal arts and sciences, and consisted of two branches, the *trivium* and the *quadrivium*. The *trivium* included grammar, rhetoric, and logic; the *quadrivium* comprehended arithmetic, geometry, music, and astronomy.

"These seven heads," says Enfield, "were supposed to include universal knowledge. He who was master of these was thought to have no need of a preceptor to explain any books or to solve any questions which lay within the compass of human reason, the knowledge of the *trivium* having furnished him with the key to all language, and that of the *quadrivium* having opened to him the secret laws of nature."

At a period, says the same writer, when few were instructed in the *trivium*, and very few studied the *quadrivium*, to be master of both was sufficient to complete the character of a philosopher. The propriety, therefore, of adopting the seven liberal arts and sciences as a symbol of the completion of human learning is apparent. The candidate, having reached this point, is now supposed to have accomplished the task upon which he had entered—he has reached the last step, and is now ready to receive the full fruition of human learning.

So far, then, we are able to comprehend the true symbolism of the winding stairs. They represent the progress of an inquiring mind with the toils and labors of intellectual cultivation and study, and the preparatory acquisition of all human science, as a preliminary step to the attainment of Divine truth, which, it must be remembered, is always symbolized in Masonry by the WORD.

Here let me again allude to the symbolism of numbers, which is for the first time presented to the consideration of the Masonic student in the legend of the winding stairs. The theory of numbers as the symbols of certain qualities was originally borrowed by the Masons from the school of Pythagoras. It will be impossible, however, to develop this doctrine, in its entire extent, in the present article, for the numeral symbolism of Masonry would itself constitute materials for an ample essay. It will be sufficient to advert to the fact, that the total number of the steps, amounting in all to *fifteen* in the American system, is a significant symbol. For *fifteen* was a sacred number among the Orientals, because the letters of the holy name JAH, יה, were, in their numerical value, equivalent to fifteen; and hence a figure in which the nine digits were so disposed as to make fifteen either way when added together perpendicularly, horizontally, or diagonally, constituted one of their most sacred talismans. The fifteen steps in the winding stairs are therefore symbolic of the name of God.

But we are not yet done. It will be remembered that a reward was promised for all this toilsome ascent of the winding stairs. Now, what are the wages of a Speculative Mason? Not money, nor corn, nor wine, nor oil. All these are but symbols. His wages are Truth, or that approximation to it which will be most appropriate to the degree into which he has been initiated. It is one of the most beautiful, but at the same time most abstruse, doctrines of the science of Masonic symbolism that the Mason is ever to be in search of truth, but is never to find it. This Divine truth, the object of all his labors, is symbolized by the Word, for which we all know he can only obtain a *substitute;* and this is intended to teach the humiliating but necessary lesson that the knowledge of the nature of God and of man's relation to him, which knowledge constitutes Divine truth, can never be acquired in this life. It is only when the portals of the grave open to us, and give us an entrance into a more perfect life, that this knowledge is to be attained. "Happy is the man," says the father of lyric poetry, "who descends beneath the hollow earth, having beheld these mysteries: he knows the end, he knows the origin of life."

The middle chamber is therefore symbolic of this life, where the symbol only of the Word can be given, where the truth is to be reached by approximation only, and yet where we are to learn that that truth will consist in a perfect knowledge of the G. A. O. T. U. This is the reward of the inquiring Mason; in this consist the wages of a Fellow-Craft; he is directed to the truth, but must travel farther and ascend still higher to attain it.

It is, then, as a symbol, and a symbol only, that we must study this beautiful legend of the winding stairs. If we attempt to adopt it as an historical fact, the absurdity of its details stares us in the face, and wise men will wonder at our credulity. Its inventors had no desire thus to impose upon our folly; but offering it to us as a great philosophical myth, they did not for a moment suppose that we would pass over its sublime moral teachings to accept the allegory as an historical narrative without meaning, and wholly irreconcilable with the records of Scripture, and opposed by all the principles of probability. To suppose that eighty thousand craftsmen were weekly paid in the narrow precincts of the Temple chambers, is simply to suppose an absurdity. But to believe that all this pictorial repre-

sentation of an ascent by a winding staircase to the place where the wages of labor were to be received, was an allegory to teach us the ascent of the mind from ignorance, through all the toils of study and the difficulties of obtaining knowledge, receiving here a little and there a little, adding something to the stock of our ideas at each step, until, in the middle chamber of life—in the full fruition of manhood—the reward is attained, and the purified and elevated intellect is invested with the reward in the direction how to seek God and God's truth; to believe this, is to believe and to know the true design of Speculative Masonry, the only design which makes it worthy of a good or a wise man's study.

Its historical details are barren, but its symbols and allegories are fertile with instruction.

Wind, Mason's. Among the Masonic tests of the last century was the question, "How blows a Mason's wind?" and the answer was, "Due east and west." Browne gives the question and answer more *in extenso*, and assigns the explanation as follows:

"How blows the wind in Masonry?

"Favorable due east and west.

"To what purpose?

"To call men to, at, and from their labor.

"What does it further allude to?

"To those miraculous winds which proved so essential in working the happy deliverance of the children of Israel from their Egyptian bondage, and proved the overthrow of Pharaoh and all his host when he attempted to follow them."

Krause very correctly thinks that the fundamental idea of the Masonic wind blowing from the east is to be found in the belief of the Middle Ages that all good things, such as philosophy and religion, came from the East. In the German ritual of *The Three Sts. John's Degrees of the Mother Lodge of the Three Globes*, the idea is expressed a little differently. The Catechism is as follows:

"Whence comes the wind?

"From the east towards the west, and from the south towards the north, and from the north towards the south, the east, and the west.

"What weather brings it?

"Variable, hail and storm, and calm and pleasant weather."

The explanation given is that these changing winds symbolize the changing progress of man's life in his pursuit of knowledge—now clear and full of hope, now dark with storms. Bode's hypothesis that these variable winds of Masonry were intended 'to refer to the changes of the condition of the Roman Church under English monarchs, from Henry VIII. to James II., and thus to connect the symbolism with the Stuart Masonry, is wholly untenable, as the symbol is not found in any of the high degrees. It is not recognized in the French, and is obsolete in the York Rite.

Window. A piece of furniture in the Mark Degree. It is a mere symbol, having no foundation in truth, as there was no such appendage to the Temple. It is simply intended to represent the place where the workman received his wages, symbolic of the reward earned by labor.

Wine. One of the elements of Masonic consecration, and, as a symbol of the inward refreshment of a good conscience, is intended, under the name of the "wine of refreshment," to remind us of the eternal refreshments which the good are to receive in the future life for the faithful performance of duty in the present.

Wings of the Cherubim, Extended. The candidate in the degree of Royal Master of the American Rite is said to be received "beneath the extended wings of the cherubim." The expression is derived from the passage in the 1st Book of Kings (vi. 27), which describes the setting of "the cherubim within the inner house." Practically, there is an anachronism in the reference to the cherubim in this degree. In the older and purer ritual, the ceremonies are supposed to take place in the council-chamber or private apartment of King Solomon, where, of course, there were no cherubim. And even in some more modern rituals, where a part of the ceremony referred to in the tradition is said to have occurred in the holy of holies, that part of the Temple was at that time unfinished, and the cherubim had not yet been placed there. But symbolically the reference to the cherubim in this degree, which represents a searcher for truth, is not objectionable. For although there is a great diversity of opinion as to their exact signification, yet there is a very general agreement that, under some one manifestation or another, they allude to and symbolize the protecting and overshadowing power of the Deity. When, therefore, the initiate is received *beneath the extended wings of the cherubim*, we are taught by this symbolism how appropriate it is, that he who comes to ask and to seek Truth, symbolized by the True Word, should begin by placing himself under the protection of that Divine Power who alone is Truth, and from whom alone truth can be obtained.

Wisconsin. In January, 1843, Freemasonry was introduced into Wisconsin by the establishment of Mineral Point Lodge at Mineral Point, Melody Lodge at Platteville, and Milwaukee Lodge at Milwaukee, all under the authority of the Grand Lodge of Missouri. December 18, 1843, delegates from these three Lodges assembled in convention at Madison, and organized the Grand Lodge of Wisconsin, Rev. B. T. Kavanaugh, the Master of Melody Lodge, being elected Grand Master.

The Grand Chapter was established February 13, 1850, and Dwight F. Lawton elected Grand High Priest.

The Grand Council of Royal and Select Masters was organized in 1857, and James Collins elected Grand Master.

The Grand Commandery was organized October 20, 1859, and Henry L. Palmer elected Grand Commander.

Wisdom. In Ancient Craft Masonry, wisdom is symbolized by the East, the place of light, being represented by the pillar that there supports the Lodge and by the Worshipful Master. It is also referred to King Solomon, the symbolical founder of the Order. In Masonic architecture the Ionic column, distinguished for the skill in its construction, as it combines the beauty of the Corinthian and the strength of the Doric, is adopted as the representative of wisdom.

King Solomon has been adopted in Speculative Masonry as the type or representative of wisdom, in accordance with the character which has been given to him in the 1st Book of Kings (iv. 30–32): "Solomon's wisdom excelled the wisdom of all the children of the east country, and all the wisdom of Egypt. For he was wiser than all men; than Ethan the Ezrahite, and Heman and Chalcol and Darda, the sons of Mahol; and his fame was in all the nations round about."

In all the Oriental philosophies a conspicuous place has been given to wisdom. In the book called the *Wisdom of Solomon* (vii., 7, 8), but supposed to be the production of a Hellenistic Jew, it is said: "I called upon God, and the spirit of wisdom came to me. I preferred her before sceptres and thrones, and esteemed riches nothing in comparison of her." And farther on in the same book (vii., 25–27) she is described as "the breath of the power of God, and a pure influence [emanation] flowing from the glory of the Almighty, . . . the brightness of the everlasting light, the unspotted mirror of the power of God, and the image of his goodness."

The Kabbalists made *Chochma*, חכמה, or Wisdom, the second of the ten Sephiroth, placing it next to the Crown. They called it a male potency, and the third of the Sephiroth, *Binah*, בינה, or Intelligence, female. These two Sephiroth, with *Keter*, כתר, or the Crown, formed the first triad, and their union produced the *Intellectual World*.

The Gnostics also had their doctrine of Wisdom, whom they called *Achamoth*. They said she was feminine; styled her Mother, and said that she produced all things through the Father.

The Oriental doctrine of Wisdom was, that it is a Divine Power standing between the Creator and the creation, and acting as His agent. "The Lord," says Solomon (proverbs iii. 19), "by wisdom hath founded the earth." Hence wisdom, in this philosophy, answers to the idea of a vivifying spirit brooding over and impregnating the elements of the chaotic world. In short, the world is but the outward manifestation of the spirit of wisdom.

This idea, so universally diffused throughout the East, is said to have been adopted into the secret doctrine of the Templars, who are supposed to have borrowed much from the Basilideans, the Manicheans, and the Gnostics. From them it easily passed over to the high degrees of Masonry, which were founded on the Templar theory. Hence, in the great decoration of the Thirty-third Degree of the Scottish Rite, the points of the triple triangle are inscribed with the letters S.A.P.I.E.N.T.I.A., or Wisdom.

It is not difficult now to see how this word *Wisdom* came to take so prominent a part in the symbolism of Ancient Masonry, and how it was expressly appropriated to King Solomon. As wisdom, in the philosophy of the East, was the creative energy—the architect, so to speak, of the world, as the emanation of the Supreme Architect—so Solomon was the architect of the Temple, the symbol of the world. He was to the typical world or temple what wisdom was to the great world of the creation. Hence wisdom is appropriately referred to him and to the Master of the Lodge, who is the representative of Solomon. Wisdom is always placed in the east of the Lodge, because thence emanate all light, and knowledge, and truth.

Withdrawal of Petition. It is a law of Masonry in America that a petition for initiation having been once presented to a Lodge, cannot be withdrawn. It must be subjected to a ballot. It must be submitted to the action of the Lodge. The rule is founded on prudential reasons. The candidate having submitted his character for inspection, the inspection must be made. It is not for the interests of Masonry (the only thing to be considered) that, on the prospect of an unfavorable judgment, he should be permitted to decline the inspection, and have the opportunity of applying to another Lodge, where carelessness or ignorance might lead to his acceptance. Initiation is not like an article of merchandise sold by rival dealers, and to be purchased, after repeated trials, from the most accommodating seller.

Witnesses. See *Trials*.

Woellner, Johann Christoph Von. A distinguished Prussian statesman, and equally distinguished as one of the leaders of the Rosicrucian Order in Germany, and the Rite of Strict Observance, to whose advancement he lent all the influence of his political position. He was born at Dobritz, May 19, 1732. He studied theology in the orthodox church, and in 1750 was appointed a preacher near Berlin, and afterward a Canon at Halberstadt. In 1786, King William III., of Prussia, appointed him privy councilor of finance, an appointment supposed to have been made as a concession to the Rite of Strict Observance, of which Woellner was a Provincial Grand Master, his Order name being *Eques à cubo*. In 1788 he became Minister of State, and was put at the head of ecclesiastical affairs. No Mason in Germany labored more assiduously in the cause of the Order and in active defense of the Rite of Strict Observance, and hence he had many enemies as well as friends. On the demise of King William, he was dismissed from his political appointments, and retired to his estate at Grossriez, where he died September 11, 1800.

Wolf. In the Egyptian mysteries, the candidate represented a wolf and wore a

wolf's skin, because Osiris once assumed the form of that animal in his contests with Typhon. In the Greek mythology, the wolf was consecrated to Apollo, or the sun, because of the connection between *luke*, light, and *lukos*, a wolf. In French, wolf is *louve*, and hence the word *louveteau*, signifying the son of a Mason. (See *Lewis No. 3.*)

Wolfenbüttel, Congress of. A city of Lower Saxony, in the principality of Wolfenbüttel, and formerly a possession of the Duke of Brunswick. In 1778 Ferdinand, Duke of Brunswick, convoked a Masonic Congress there, with a view of reforming the organization of the Order. Its results, after a session of five weeks, were a union of the Swedish and German Masons, which lasted only for a brief period, and the preparation for a future meeting at Wilhelmsbad.

Wolfgang, Albert, Prince of Lippe Schaumberg. Born in 1699, died in 1748. One of the Masonic circle whom Frederick the Great favored and sought at times to meet.

Woman. The law which excludes women from initiation into Masonry is not contained in the precise words in any of the Old Constitutions, although it is continually implied, as when it is said in the Lansdowne MS. (*circa* 1560) that the Apprentice must be "of limbs whole, as a man ought to be," and that he must be "no bondsman." All the regulations also refer to men only, and many of them would be wholly inapplicable to women. But in the Charges compiled by Anderson and Desaguliers, and published in 1723, the word "woman" is for the first time introduced, and the law is made explicit. Thus it is said that "the persons admitted members of a Lodge must be good and true *men*, ... no bondmen, no *women*," etc. (*Constitutions*, 1723, p. 51.)

Perhaps the best reason that can be assigned for the exclusion of women from our Lodges will be found in the character of our organization as a mystic society. Speculative Freemasonry is only an application of the art of Operative Masonry to purposes of morality and science. The Operative branch of our Institution was the forerunner and origin of the Speculative. Now, as we admit of no innovations or changes in our customs, Speculative Masonry retains, and is governed by, all the rules and regulations that existed in and controlled its Operative prototype. Hence, as in this latter art only hale and hearty men, in possession of all their limbs and members, so that they might endure the fatigues of labor, were employed, so in the former the rule still holds, of excluding all who are not in the possession of these prerequisite qualifications. Woman is not permitted to participate in our rites and ceremonies, not because we deem her unworthy or unfaithful, or incapable, as has been foolishly supposed, of keeping a secret, but because, on our entrance into the Order, we found certain regulations which prescribed that only men capable of enduring the labor, or of fulfilling the duties of Operative Masons, could be admitted. These regulations we have solemnly promised never to alter; nor could they be changed, without an entire disorganization of the whole system of Speculative Masonry.

Wood-Cutters, Order of. See *Fendeurs.*

Woodford Manuscript. A manuscript formerly in the possession of one of England's most esteemed Masons, Rev. A. F. A. Woodford, editor of *Kenning's Cyclopædia of Freemasonry*, of 700 pages, London. Bro. Hughan says it is almost a verbatim copy of the Cooke MSS. The indorsement upon it reads, "This is a very ancient record of Masonry, which was copyed for me by Wm. Reid, Secretary to the Grand Lodge, 1728." It formerly belonged to Mr. William Cowper, clerk to the Parliament, and is now in the library of the Quatuor Coronati Lodge, No. 2076, London, England.

Woog, Carl Christian. Born at Dresden in 1713, and died at Leipsic, April 24, 1771. Mossdorf says that he was, in 1740, a resident of London, and that there he was initiated into Ancient Craft Masonry, and also into the Scottish degree of Knight of St. Andrew. In 1749, he published a Latin work entitled *Presbyterorum et Diaconorum Achaiæ de Martyrio Sancti Andreæ Apostoli, Epistola Encyclica*, in which he refers to the Freemasons (p. 32) in the following language: "Unicum adhuc addo, esse inter cæmentarios, seu lapicidas liberos, (qui Franco muratoriorum *Franc-Maçons* nomine communiter insigniuntur quique rotunda quadratis miscere dicuntur,) quosdam qui S. Andreæ memoriam summa veneratione recolant. Ad minimum, si scriptis, quæ detecta eorum mysteria et arcana recensent, fides non est deneganda, certum erit, eos quotunnis diem quoque Andreas, ut Sancti Johannis diem solent, festum agere atque ceremoniosum celebrare, esseque inter eos sectam aliquam, quæ per crucem, quam in pectore gerant, in qua Sanctus Andreas funibus alligatus hæreat, à reliquis se destinguunt"; i. e., "I add only this, that among the Freemasons (commonly called *Franc-Maçons*, who are said to mingle circles with squares,) there are certain ones who cherish the memory of St. Andrew with singular veneration. At all events, if we may credit those writings in which their mysteries and secrets are detected and exposed, it will be evident that they are accustomed to keep annually, with ceremonies, the festival of St. Andrew as well as that of St. John; and that there is a sect among them which distinguish themselves from the others by wearing on their breast the cross on which St. Andrew was fastened by cords." Woog, in a subsequent passage, defends the Freemasons from the charge made by these Expositions that they were irreligious, but declares that *by him their mysteries shall remain buried in profound silence*—"per me vero maneant eorum mysteria alto silentio sepulta." It is, apparently, from these passages that Mossdorf draws his conclusions that Woog was a Freemason, and had received the

Scottish degree of Knight of St. Andrew. They at least prove that he was an early friend of the Institution.

Word. When emphatically used, the expression, "the Word," is in Masonry always referred to the Third Degree, although there must be a word in each degree. In this latter and general sense, the Word is called by French Masons "la parole," and by the Germans "ein Worterzeichen." The use of a Word is of great antiquity. We find it in the ancient mysteries. In those of Egypt it is said to have been the Tetragrammaton. The German Stone-Masons of the Middle Ages had one, which, however, was probably only a password by which the traveling Companion might make himself known in his professional wanderings. Lyon (*Hist. of the L. of Edinb.*, p. 22) shows that it existed, in the sixteenth and subsequent centuries, in the Scotch Lodges, and he says that "the Word is the only secret that is ever alluded to in the minutes of Mary's Chapel, or in those of Kilwinning, Atcheson's Haven, or Dunblane, or any other that we have examined of a date prior to the erection of the Grand Lodge." Indeed, he thinks that the communication of this Word constituted the only ceremony of initiation practised in the Operative Lodges. At that time there was evidently but one Word for all the ranks of Apprentices, Craftsmen, and Masters. He thinks that this communication of the Mason Word to the Apprentices under oath constituted the germ whence has sprung the Symbolical Masonry. But it must be remembered that the learned and laborious investigations of Bro. Lyon refer only to the Lodges of Scotland. There is no sufficient evidence that a more extensive system of initiation did not prevail at the same time, or even earlier, in England and Germany. Indeed, Findel has shown that it did in the latter country; and it is difficult to believe that the system, which we know was in existence in 1717, was a sudden development out of a single Word, for which we are indebted to the inventive genius of those who were engaged in the revival at that period. Be this as it may, the evidence is conclusive that everywhere, and from the earliest times, there was a Word. This at least is no modern usage.

But it must be admitted that this Word, whatever it was, was at first a mere mark of recognition. Yet it may have had, and probably did have, a mythical signification, and had not been altogether arbitrarily adopted. The word given in the Sloane MS., No. 3329, which Bro. Hughan places at a date not posterior to 1700, is undoubtedly a corrupted form of that now in use, and with the signification of which we are well acquainted. Hence we may conclude that the legend, and the symbolism connected with it, also existed at the same time, but only in a nascent and incomplete form.

The modern development of Speculative Masonry into a philosophy has given a perfected form to the symbolism of the Word no longer confined to use as a means of recognition, but elevated, in its connection with the legend of the Third Degree, to the rank of a symbol.

So viewed, and by the scientific Mason it is now only so viewed, the Word becomes the symbol of Divine Truth, the loss of which and the search for it constitute the whole system of Speculative Masonry. So important is this Word, that it lies at the very foundation of the Masonic edifice. The Word might be changed, as might a grip or a sign, if it were possible to obtain the universal consent of the Craft, and Masonry would still remain unimpaired. But were the Word abolished, or released from its intimate connection with the Hiramic legend, and with that of the Royal Arch, the whole symbolism of Speculative Masonry would be obliterated. The Institution might withstand such an innovation, but its history, its character, its design, would belong to a newer and a totally different society. The Word is what Dermott called the Royal Arch, "the marrow of Masonry."

Word, Lost. See *Lost Word.*

Word, Mason. In the minutes and documents of the Lodges of Scotland during the sixteenth, seventeenth, and eighteenth centuries, the expression "Mason word" is constantly used. This continuous use would indicate that but one word was then known. Nicolai, in his *Essay on the Accusations against the Templars*, quotes a "small dictionary published at the beginning of the eighteenth century," in which the "Mason's word" is defined.

Word, Sacred. A term applied to the chief or most prominent word of a degree, to indicate its peculiarly sacred character, in contradistinction to a password, which is simply intended as a mode of recognition. It is sometimes ignorantly corrupted into "secret word." All significant words in Masonry are *secret*. Only certain ones are *sacred*.

Word, Significant. See *Significant Word.*

Word, True. Used in contradistinction to the *Lost Word* and the *Substitute Word*. To find it is the object of all Masonic search and labor. For as the Lost Word is the symbol of death, the True Word is the symbol of life eternal. It indicates the change that is always occurring—truth after error, light after darkness, life after death. Of all the symbolism of Speculative Masonry, that of the True Word is the most philosophic and sublime.

Work. See *Labor.*

Working-Tools. In each of the degrees of Masonry, certain implements of the Operative art are consecrated to the Speculative science, and adopted to teach as symbols lessons of morality. With these the Speculative Mason is taught to erect his spiritual temple, as his Operative predecessors with the same implements constructed their material temples. Hence they are called the working-tools of the degree. They vary but very slightly in the different Rites, but the

same symbolism is preserved. The principal working-tools of the Operative art that have been adopted as symbols in the Speculative science, confined, however, to Ancient Craft Masonry, and not used in the higher degrees, are, the twenty-four-inch gage, common gavel, square, level, plumb, skirrit, compasses, pencil, trowel, mallet, pickax, crow, and shovel. (See them under their respective heads.)

Work, Master of the. An architect or superintendent of the building of an edifice. Du Cange (*Glossarium*) thus defines it: "Magister operis vel operarum vulgo, maître de l'œuvre, cui operibus publicis vacare incumbit," i. e., "Master of the work or of the works, commonly, maître de l'œuvre, one whose duty it is to attend to the public works." In the Cooke MS. (line 529) it is said: "And also he that were most of conny-ing [skill] schold be governour of the werke, and scholde be callyd maister." In the old record of the date of Edward III., cited by Anderson in his second edition (p. 71), it is prescribed "that Master Masons, or Masters of Work, shall be examined whether they be able of cunning to serve their respective lords." The word was in common use in the Middle Ages, and applied to the Architect or Master Builder of an edifice. Thus Edwin of Steinbach, the architect of the Cathedral of Strasburg, is called Master of the Work. In the monasteries there was a similar officer, who was, however, more generally called the *Operarius*, but sometimes *Magister operis*.

Workmen at the Temple. We have no historical book, except the meager details in the Books of Kings and Chronicles, of the number or classification of the workmen at the Temple of Solomon. The subject has, however, afforded a fertile theme for the exercise of the inventive genius of the ritualists. Although devoid of interest as an historical study, an acquaintance with these traditions, especially the English and American ones, and a comparison of them with the Scriptural account and with that given by Josephus, are necessary as a part of the education of a Masonic student. I furnish the legends, therefore, simply as a matter of curiosity, without the slightest intention to vouch for their authenticity, at the same time trusting that the good sense and common fairness of the reader will prevent him from including such unauthenticated matter in lectures usually given in the Third Degree and often with much pretense to learning.

In the 2d Book of Chronicles, chap. ii., verses 17 and 18, we read as follows:

"And Solomon numbered all the strangers that were in the land of Israel, after the numbering wherewith David his father had numbered them; and they were found an hundred and fifty thousand and three thousand and six hundred.

"And he set threescore and ten thousand of them to be bearers of burdens, and fourscore thousand to be hewers in the mountain, and three thousand and six hundred overseers to set the people a-work."

The same numerical details are given in the second verse of the same chapter. Again, in the 1st Book of Kings, chap. v., verses 13 and 14, it is said:

"And King Solomon raised a levy out of all Israel; and the levy was thirty thousand men.

"And he sent them to Lebanon, ten thousand a month by courses: a month they were in Lebanon, and two months at home: and Adoniram was over the levy."

The succeeding verses make the same enumeration of workmen as that contained in the Book of Chronicles quoted above, with the exception that, by omitting the three hundred Harodim, or rulers over all, the number of overseers is stated in the Book of Kings to be only three thousand three hundred.

With these authorities, and the assistance of Masonic traditions, Anderson, in the *Book of Constitutions* (2d ed., p. 11), constructs the following table of the Craftsmen at the Temple:

Harodim, Princes, Rulers, or Provosts.		300
Menatzchim, Overseers, or Master Masons		3,300
Ghiblim, Stone-Squarers	All Fellow-Crafts	80,000
Ischotzeb, Hewers		
Benai, Builders		
The levy out of Israel, who were timber-cutters		30,000
All the Freemasons employed in the work of the Temple, exclusive of the two Grand Wardens		113,000

Besides the *Ish Sabal*, or men of burden, the remains of the old Canaanites, amounting to 70,000, who are not numbered among the Masons.

In relation to the classification of these workmen, Anderson says: "Solomon partitioned the Fellow Crafts into certain Lodges, with a Master and Wardens in each, that they might receive commands in a regular manner, might take care of their tools and jewels, might be paid regularly every week, and be duly fed and clothed; and the Fellow Crafts took care of their succession by educating Entered Apprentices."

Josephus makes a different estimate. He includes the 3,300 Overseers in the 80,000 Fellow-Crafts, and makes the number of Masons, exclusive of the 70,000 bearers of burden, amount to only 110,000.

A work published in 1764, entitled *The Masonic Pocket-Book*, gives a still different classification. The number, according to this authority, was as follows:

Harodim	300
Menatzchim	3,300
Ghiblim	83,000
Adoniram's men	30,000
Total	116,600

which, together with the 70,000 Ish Sabal, or laborers, will make a grand total of 186,600 workmen.

According to the statement of Webb, which has been generally adopted by the Fraternity in the United States, there were:

Grand Masters	3
Overseers	3,300
Fellow-Crafts	80,000
Entered Apprentices	70,000

This account makes no allusion to the 300 Harodim, nor to the levy of 30,000; it is, therefore, manifestly incorrect. Indeed, no certain authority can be found for the complete classification of the workmen, since neither the Bible nor Josephus gives any account of the number of Tyrians employed. Oliver, however, in his *Historical Landmarks*, has collected from the Masonic traditions an account of the classifications of the workmen, which I shall insert, with a few additional facts taken from other authorities.

According to these traditions, the following was the classification of the Masons who wrought in the quarries of Tyre:

Superexcellent Masons	6
Excellent Masons	48
Grand Architects	8
Architects	16
Master Masons	2,376
Mark Masters	700
Markmen	1,400
Fellow-Crafts	53,900
Total	58,454

These were arranged as follows: The six Superexcellent Masons were divided into two Grand Lodges, with three brethren in each to superintend the work. The Excellent Masons were divided into six Lodges of nine each, including one of the Superexcellent Masons, who presided as Master. The eight Grand Architects constituted one Lodge, and the sixteen Architects another. The Grand Architects were the Masters, and the Architects the Wardens, of the Lodges of Master Masons, which were eight in number, and consisted, with their officers, of three hundred in each. The Mark Masters were divided into fourteen Lodges of fifty in each, and the Markmen into fourteen Lodges also, of one hundred in each. The Mark Masters were the Masters, and the Markmen the Wardens, of the Lodges of Fellow-Crafts, which were seven hundred in number, and with their officers consisted of eighty in each.

The classification of the workmen in the forest of Lebanon was as follows:

Superexcellent Masons	3
Excellent Masons	24
Grand Architects	4
Architects	8
Master Masons	1,188
Mark Masters	300
Markmen	600
Fellow-Crafts	23,100
Entered Apprentices	10,000
Total	35,227

These were arranged as follows: The three Superexcellent Masons formed one Lodge. The Excellent Masons were divided into three Lodges of nine each, including one of the Superexcellent Masons as Master. The four Grand Architects constituted one Lodge, and the eight Architects another, the former acting as Masters and the latter as Wardens of the Lodges of Master Masons, which were four in number, and consisted, with their officers, of three hundred in each. The Mark Masters were divided into six Lodges of fifty in each, and the Markmen into six Lodges also, of one hundred in each. These two classes presided, the former as Masters and the latter as Wardens, over the Lodges of Fellow-Crafts, which were three hundred in number, and were composed of eighty in each, including their officers.

After three years had been occupied in "hewing, squaring, and numbering" the stones, and in "felling and preparing" the timbers, these two bodies of Masons, from the quarries and the forest, united for the purpose of properly arranging and fitting the materials, so that no metallic tool might be required in putting them up, and they were then carried up to Jerusalem. Here the whole body was congregated under the superintending care of Hiram Abif, and to them were added four hundred and twenty Lodges of Tyrian and Sidonian Fellow-Crafts, having eighty in each, and the twenty thousand Entered Apprentices of the levy from Israel, who had heretofore been at rest, and who were added to the Lodges of their degree, making them now consist of three hundred in each, so that the whole number then engaged at Jerusalem amounted to two hundred and seventeen thousand two hundred and eighty-one, who were arranged as follows:

9 Lodges of Excellent Masons, 9 in each, were	81
12 Lodges of Master Masons, 300 in each, were	3,600
1,000 Lodges of Fellow-Crafts, 80 in each, were	80,000
420 Lodges of Tyrian Fellow-Crafts, 80 in each, were	33,600
100 Lodges of Entered Apprentices, 300 in each, were	30,000
70,000 Ish Sabal, or laborers	70,000
Total	217,281

Such is the system adopted by our English brethren. The American ritual has greatly simplified the arrangement. According to the system now generally adopted in this country, the workmen engaged in building King Solomon's Temple are supposed to have been classified as follows:

3 Grand Masters.

300 Harodim, or Chief Superintendents, who were Past Masters.

3,300 Overseers, or Master Masons, divided into Lodges of three in each.

80,000 Fellow-Crafts, divided into Lodges of five in each.

70,000 Entered Apprentices, divided into Lodges of seven in each.

According to this account, there must have been eleven hundred Lodges of Master Masons; sixteen thousand of Fellow-Crafts; and ten thousand of Entered Apprentices. No account is here taken of the levy of thirty thousand who are supposed not to have been Masons, nor of the builders sent by Hiram, King of Tyre, whom the English ritual places at thirty-three thousand six hundred, and most of whom we may suppose to have been members of the Dionysiac Fraternity of Artificers, the institution from which Freemasonry, according to legendary authority, took its origin.

On the whole, the American system seems too defective to meet all the demands of the inquirer into this subject—an objection to which the English is not so obnoxious. But, as I have already observed, the whole account is mythical, and is to be viewed rather as a curiosity than as having any historical value.

Workshop. The French Masons call a Lodge an "*atelier*," literally, a workshop, or, as Boiste defines it, "a place where Craftsmen work under the same Master."

World. The Lodge is said to be a symbol of the world. Its form—an oblong square, whose greatest length is from east to west—represents the shape of the inhabited world according to the theory of the ancients. The "clouded canopy," or the "starry-decked covering" of the Lodge, is referred to the sky. The sun, which enlightens and governs the world at morning, noon, and evening, is represented by the three superior officers. And, lastly, the Craft, laboring in the work of the Lodge, present a similitude to the inhabitants of the world engaged in the toils of life. While the Lodge is adopted as a copy of the Temple, not less universal is that doctrine which makes it a symbol of the world. (See *Form of the Lodge*.)

Worldly Possessions. In the English lectures of Dr. Hemming, the word Tubal Cain is said "to denote worldly possessions," and hence Tubal Cain is adopted in that system as the symbol of worldly possessions. The idea is derived from the derivation of Cain from *kanah*, to acquire, to gain, and from the theory that Tubal Cain, by his inventions, had enabled his pupils to acquire riches. But the derivative meaning of the word has reference to the expression of Eve, that in the birth of her eldest son she had acquired a man by the help of the Lord; and any system which gives importance to mere wealth as a Masonic symbol, is not in accord with the moral and intellectual designs of the Institution, which is thus represented as a mere instrument of Mammon. The symbolism is quite modern, and has not been adopted elsewhere than in English Masonry.

Worldly Wealth. Partial clothing is, in Masonry, a symbol teaching the aspirant that Masonry regards no man on account of his worldly wealth or honors; and that it looks not to his outward clothing, but to his internal qualifications.

Worship. Originally, the term "to worship" meant to pay that honor and reverence which are due to one who is worthy. Thus, where our authorized version translates Matthew xix. 19, "Honour thy father and thy mother," Wycliffe says, "Worschip thi fadir and thi modir." And in the marriage service of the Episcopal Church, the expression is still retained, "with my body I thee worship," that is, honor or reverence thee. Hence the still common use in England of the words *worshipful* and *right worshipful* as titles of honor applied to municipal and judicial officers. Thus the mayors of small towns, and justices of the peace, are styled "Worshipful," while the mayors of large cities, as London, are called "Right Worshipful." The usage was adopted and retained in Masonry. The word *worship*, or its derivatives, is not met with in any of the old manuscripts. In the "Manner of constituting a New Lodge," adopted in 1722, and published by Anderson in 1723, the word "worship" is applied as a title to the Grand Master. (*Constitutions*, 1723, p. 71.) In the seventeenth century, the gilds of London began to call themselves "Worshipful," as, "the Worshipful Company of Grocers," etc.; and it is likely that the Lodges at the revival, and perhaps a few years before, adopted the same style.

Worshipful. A title applied to a symbolic Lodge and to its Master. The Germans sometimes use the title "hochwürdig." The French style the Worshipful Master "Venerable," and the Lodge, "Respectable."

Worshipful Lodge. See *Worshipful*.

Worshipful Master. See *Worshipful*.

Worshipful, Most. The prevailing title of a Grand Master and of a Grand Lodge.

Worshipful, Right. The prevailing title of the elective officers of a Grand Lodge below the Grand Master.

Worshipful, Very. A title used by certain of the Grand Officers of the Grand Lodge of England.

Wound, Mason's. Nicolai, in the appendix to his *Essay on the Accusations against the Templars*, says that in a small dictionary, published at the beginning of the eighteenth century, the following definition is to be found: "*Mason's Wound.* It is an imaginary wound above the elbow, to represent a fracture of the arm occasioned by a fall from an elevated place." The origin and esoteric meaning of the phrase have been lost. It was probably used as a test, or alluded to some legend which has now escaped memory. Also, the Master's penalty in the degree of Perfection.

Wren, Sir Christopher. One of the most distinguished architects of England was the son of Dr. Christopher Wren, Rector of East Knoyle in Wiltshire, and was born there October 20, 1632. He was entered as a gentleman commoner at Wadham College, Oxford, in his fourteenth year, being already distinguished for his mathematical knowledge. He is said to have invented, before this period,

several astronomical and mathematical instruments. In 1645, he became a member of a scientific club connected with Gresham College, from which the Royal Society subsequently arose. In 1653, he was elected a Fellow of All Souls' College, and had already become known to the learned men of Europe for his various inventions. In 1657, he removed permanently to London, having been elected Professor of Astronomy at Gresham College.

During the political disturbances which led to the abolition of the monarchy and the establishment of the commonwealth, Wren, devoted to the pursuits of philosophy, appears to have kept away from the contests of party. Soon after the restoration of Charles II., he was appointed Savillian Professor at Oxford, one of the highest distinctions which could then have been conferred on a scientific man. During this time he was distinguished for his numerous contributions to astronomy and mathematics, and invented many curious machines, and discovered many methods for facilitating the calculations of the celestial bodies.

Wren was not professionally educated as an architect, but from his early youth had devoted much time to its theoretic study. In 1665 he went to Paris for the purpose of studying the public buildings in that city, and the various styles which they presented. He was induced to make this visit, and to enter into these investigations, because, in 1660, he had been appointed by King Charles II. one of a commission to superintend the restoration of the Cathedral of St. Paul's, which had been much dilapidated during the times of the commonwealth. But before the designs could be carried into execution, the great fire occurred which laid so great a part of London, including St. Paul's, in ashes.

In 1661, he was appointed assistant to Sir John Denham, the Surveyor-General, and directed his attention to the restoration of the burnt portion of the city. His plans were, unfortunately for the good of London, not adopted, and he confined his attention to the rebuilding of particular edifices. In 1667, he was appointed the successor of Denham as Surveyor-General and Chief Architect. In this capacity he erected a large number of churches, the Royal Exchange, Greenwich Observatory, and many other public edifices. But his crowning work, the masterpiece that has given him his largest reputation, is the Cathedral of St. Paul's, which was commenced in 1675 and finished in 1710. The original plan that was proposed by Wren was rejected through the ignorance of the authorities, and differed greatly from the one on which it has been constructed. Wren, however, superintended the erection as master of the work, and his tomb in the crypt of the Cathedral was appropriately inscribed with the words: "Si monumentum requiris, circumspice"; i. e., "If you seek his monument, look around."

In 1672, Wren was made a Knight, and in 1674 he married a daughter of Sir John Coghill. To a son by this marriage are we indebted for memoirs of the family of his father, published under the title of *Parentalia*. After the death of this wife, he married a daughter of Viscount Fitzwilliam.

In 1680, Wren was elected President of the Royal Society, and continued to a late period his labors on public edifices, building, among others, additions to Hampton Court and to Windsor Castle.

After the death of Queen Anne, who was the last of his royal patrons, Wren was removed from his office of Surveyor-General, which he had held for a period of very nearly half a century. He passed the few remaining years of his life in serene retirement. He was found dead in his chair after dinner, on February 25, 1723, in the ninety-first year of his age.

Notwithstanding that much that has been said by Anderson and other writers of the eighteenth century, concerning Wren's connection with Freemasonry, is without historical confirmation, there can, I think, be no doubt that he took a deep interest in the Speculative as well as in the Operative Order. The Rev. J. W. Laughlin, in a lecture on the life of Wren, delivered in 1857, before the inhabitants of St. Andrew's, Holborn, and briefly reported in the *Freemasons' Magazine*, said that "Wren was for eighteen years a member of the old Lodge of St. Paul's, then held at the Goose and Gridiron, near the Cathedral, now the Lodge of Antiquity; and the records of that Lodge show that the maul and trowel used at the laying of the stone of St. Paul's, together with a pair of carved mahogany candlesticks, were presented by Wren, and are now in possession of that Lodge." By the order of the Duke of Sussex, a plate was placed on the mallet or maul which contained a statement of the fact.

Mr. C. W. King, who is not a Mason, but has derived his statement from a source to which he does not refer (but which was perhaps Nicolai), makes, in his work on the *Gnostics* (p. 176), the following statement, which is here quoted merely to show that the traditionary belief of Wren's connection with Speculative Freemasonry is not confined to the Craft. He says:

"Another and a very important circumstance in this discussion must always be kept in view: our Freemasons (as at present organized in the form of a secret society) derive their title from a mere accidental circumstance connected with their actual establishment. It was in the Common Hall of the London Gild of Freemasons (the trade) that their first meetings were held under Christopher Wren, president, in the time of the Commonwealth. Their real object was political—the restoration of monarchy; hence the necessary exclusion of the public, and the oaths of secrecy enjoined on the members. The pretence of

promoting architecture, and the choice of the place where to hold their meetings, suggested by the profession of their president, were no more than blinds to deceive the existing government."

Anderson, in the first edition of the *Constitutions*, makes but a slight reference to Wren, only calling him "the ingenious architect, Sir Christopher Wren." I am almost afraid that this passing notice of him who has been called "the Vitruvius of England" must be attributed to servility. George I. was the stupid monarch who removed Wren from his office of Surveyor-General, and it would not do to be too diffuse with praise of one who had been marked by the disfavor of the king. But in 1727 George I. died, and in his second edition, published in 1738, Anderson gives to Wren all the Masonic honors to which he claims that he was entitled. It is from what Anderson has said in that work, that the Masonic writers of the eighteenth century and the first half of the nineteenth, not requiring the records of authentic history, have drawn their views of the official relations of Wren to the Order. He first introduces Wren (p. 101) as one of the Grand Wardens at the General Assembly held December 27, 1663, when the Earl of St. Albans was Grand Master, and Sir John Denham, Deputy Grand Master. He says that in 1666 Wren was again a Grand Warden, under the Grand Mastership of the Earl of Rivers; but immediately afterward he calls him "Deputy Wren," and continues to give him the title of Deputy Grand Master until 1685, when he says (p. 106) that "the Lodges met, and elected Sir Christopher Wren Grand Master, who appointed Mr. Gabriel Cibber and Mr. Edmund Savage Grand Wardens; and while carrying on St. Paul's, he annually met those brethren who could attend him, to keep up good old usages." Anderson (p. 107) makes the Duke of Richmond and Lennox Grand Master, and reduces Wren to the rank of a Deputy; but he says that in 1698 he was again chosen Grand Master, and as such "celebrated the Cape-stone" of St. Paul's in 1708. "Some few years after this," he says, "Sir Christopher Wren neglected the office of Grand Master." Finally, he says (p. 109) that in 1716 "the Lodges in London finding themselves neglected by Sir Christopher Wren," Masonry was revived under a new Grand Master. Some excuse for the aged architect's neglect might have been found in the fact that he was then eighty-five years of age, and had been long removed from his public office of Surveyor-General.

Noorthouck is more considerate. Speaking of the placing of the last stone on the top of St. Paul's—which, notwithstanding the statement of Anderson, was done, not by Wren, but by his son—he says (*Constitutions*, p. 204), "the age and infirmities of the Grand Master, which prevented his attendance on this solemn occasion, confined him afterwards to great retirement; so that the Lodges suffered from want of his usual presence in visiting and regulating their meetings, and were reduced to a small number."

Noorthouck, however, repeats substantially the statements of Anderson in reference to Wren's Grand Mastership. How much of these statements can be authenticated by history is a question that must be decided only by more extensive investigations of documents not yet in possession of the Craft. Findel says (*Hist.*, p. 127) that Anderson, having been commissioned in 1735 by the Grand Lodge to make a list of the ancient Patrons of the Masons, so as to afford something like an historical basis, "transformed the former Patrons into Grand Masters, and the Masters and Superintendents into Grand Wardens and the like, which were unknown until the year 1717."

Of this there can be no doubt; but there is other evidence that Wren was a Freemason. In Aubrey's *Natural History of Wiltshire* (p. 277), a manuscript in the library of the Royal Society, Halliwell finds and cites, in his *Early History of Freemasonry in England* (p. 46), the following passage:

"This day, May the 18th, being Monday, 1691, after Rogation Sunday, is a great convention at St. Paul's Church of the fraternity of the Adopted Masons, where Sir Christopher Wren is to be adopted a Brother, and Sir Henry Goodric of the Tower, and divers others. There have been kings that have been of this sodality."

If this statement be true—and we have no reason to doubt it, from Aubrey's general antiquarian accuracy—Anderson is incorrect in making him a Grand Master in 1685, six years before he was initiated as a Freemason. The true version of the story probably is this: Wren was a great architect—the greatest at the time in England. As such he received the appointment of Deputy Surveyor-General under Denham, and subsequently, on Denham's death, of Surveyor-General. He thus became invested, by virtue of his office, with the duty of superintending the construction of public buildings. The most important of these was St. Paul's Cathedral, the building of which he directed in person, and with so much energy that the parsimonious Duchess of Marlborough, when contrasting the charges of her own architect with the scanty remuneration of Wren, observed that "he was content to be dragged up in a basket three or four times a week to the top of St. Paul's, and at great hazard, for £200 a year." All this brought him into close connection with the gild of Freemasons, of which he naturally became the patron, and subsequently he was by initiation adopted into the sodality. Wren was, in fact, what the Medieval Masons called *Magister Operis*, or Master of the Work. Anderson, writing for a purpose, naturally transformed this title into that of Grand Master—an office supposed to be unknown

until 1717. Aubrey's authority sufficiently establishes the fact that Wren was a Freemason, and the events of his life prove his attachment to the profession.*

Wrestle. A degree sometimes called the "Mark and Link," or Wrestle. It was formerly connected with the Mark Degree in England. Its ceremonies were founded on the passage contained in Genesis xxxii. 24–30.

Writing. The law which forbids a Mason to commit to writing the esoteric parts of the ritual is exemplified in some American Lodges by a peculiar ceremony; but the usage is not universal. The Druids had a similar rule; and we are told that they, in keeping their records, used the letters of the Greek alphabet, so that they might be unintelligible to those who were not authorized to read them.

Wykeham, William of. Bishop of Winchester. Born at Wykeham, in Hampshire, in 1324, and died in 1404. He was eminent both as an ecclesiastic and statesman. In 1359, before he reached the episcopate, Edward III. appointed him surveyor of the works at Windsor, which castle he rebuilt. In his Warrant or Commission, he was invested with power "to appoint all workmen, to provide materials, and to order everything relating to building and repairs." He was, in fact, what the old manuscript Constitutions call "The Lord," under whom were the Master Masons. Anderson says that he was at the head of four hundred Freemasons (*Constitutions*, 1738, p. 70), was Master of Work under Edward III., and Grand Master under Richard II. (*Ibid.*, p.72.) And the *Freemasons' Magazine* (August, 1796) styles him "one of the brightest ornaments that Freemasonry has ever boasted." In this there is, of course, a mixture of myth and history. Wykeham was an architect as well as a bishop, and superintended the building of many public edifices in England in the fourteenth century, being a distinguished example of the connection so common in Medieval times between the ecclesiastics and the Masons.

Wyoming. Cheyenne Lodge, No. 16, at Cheyenne, was chartered by the Grand Lodge of Colorado, October 7, 1868.

Laramie Lodge, No. 18, at Laramie City, received a dispensation from the same Grand Lodge, January 31, 1870, and a Charter, September 28, 1870.

Evanston Lodge, No. 24, at Evanston, received a dispensation from the same Grand Lodge, September 8, 1873, and a Charter, September 30, 1874.

Wyoming Lodge, No. 28, at South Pass City, had a dispensation issued to her by the Grand Lodge of Nebraska, November 20, 1869, and a Charter, June 23, 1870.

The representatives of these four Lodges met in convention December 15, 1874, at Laramie City, and proceeded to organize a Grand Lodge for Wyoming by adopting a constitution, electing and installing their Grand Officers on the 16th. The four Lodges then had a membership of two hundred and fifty.

The first annual communication was held October 12, 1875.

Wyseacre. The Leland MS., referring to Pythagoras, says that "wynnynge entraunce yn al Lodges of Maconnes, he lerned muche, and retournedde and woned yn Grecia Magna wachsynge, and becommynge a mightye wyseacre." The word wiseacre, which now means a dunce or silly person, is a corruption of the German *weissager*, and originally signified a wise sayer or philosopher, in which sense it is used in the passage cited.

*R. F. Gould, in his *History of F. M.* (vol. ii., ch. 12) has cast grave doubts upon the alleged fact that Wren was a Freemason.

X

X. The twenty-fourth letter of the English alphabet and the last letter of the proper Latin alphabet. As a numeral it stands for ten

Xaintrailles, Madame de. A lady who was initiated into Masonry by a French Lodge that did not have the excuse for this violation of law that we must accord to the Irish one in the case of Miss St. Leger. Clavel (*Hist. Pittoresq.*, p. 34) tells the story, but does not give the date, though it must have been about the close of the last century. The law of the Grand Orient of France required each Lodge of Adoption to be connected with and placed under the immediate guardianship of a regular Lodge of Masons. It was in one of these guardian Lodges that the female initiation which we are about to describe took place. The Lodge of "Frères-Artistes," at Paris, over which Bro. Cuvelier de Trie presided as Master, was about to give what is called a Fête of Adoption, that is, to open a Lodge for female Masonry, and initiate candidates into that rite. Previous, however, to the introduction of the female members, the brethren opened a regular Lodge of Ancient Masonry in the First Degree. Among the visitors who waited in the antechamber for admission was a youthful officer in the uniform of a captain

of cavalry. His diploma or certificate was requested of him by the member deputed for the examination of the visitors, for the purpose of having it inspected by the Lodge. After some little hesitation, he handed the party asking for it a folded paper, which was immediately carried to the Orator of the Lodge, who, on opening it, discovered that it was the commission of an aide-de-camp, which had been granted by the Directory to the wife of General de Xaintrailles, a lady who, like several others of her sex in those troublous times, had donned the masculine attire and gained military rank at the point of the sword. When the nature of the supposed diploma was made known to the Lodge, it may readily be supposed that the surprise was general. But the members were Frenchmen: they were excitable and they were gallant; and consequently, in a sudden and exalted fit of enthusiasm, which as Masons we cannot excuse, they unanimously determined to confer the First Degree, not of Adoption, but of regular and legitimate Freemasonry, on the brave woman who had so often exhibited every manly virtue, and to whom her country had on more than one occasion committed trusts requiring the greatest discretion and prudence as well as courage. Madame de Xaintrailles was made acquainted with the resolution of the Lodge, and her acquiescence in its wishes requested. To the offer, she replied, "I have been a man for my country, and I will again be a man for my brethren." She was forthwith introduced and initiated as an Entered Apprentice, and repeatedly afterward assisted the Lodge in its labors in the First Degree.

Doubtless the Irish Lodge was, under all the circumstances, excused, if not justified, in the initiation of Miss St. Leger. But for the reception of Madame de Xaintrailles we look in vain for the slightest shadow of an apology. The outrage on their obligations as Masons, by the members of the Parisian Lodge, richly merited the severest punishment, which ought not to have been averted by the plea that the offense was committed in a sudden spirit of enthusiasm and gallantry.

Xavier Mier è Campello, Francisco. He was Bishop of Almeria, and Inquisitor-General of Spain, and an ardent persecutor of the Freemasons. In 1815, Ferdinand VII. having reestablished the Inquisition in Spain and suppressed the Masonic Lodges, Xavier published the bull of Pius VII., against the Order, in an ordinance of his own, in which he denounced the Lodges as "Societies which lead to sedition, to independence, and to all errors and crimes." He threatened the utmost rigors of the civil and canon laws against all who did not, within the space of fifteen days, renounce them; and then instituted a series of persecutions of the most atrocious character. Many of the most distinguished persons of Spain were arrested, and imprisoned in the dungeons of the Inquisition, on the charge of being "suspected of Freemasonry."

Xerophagists. On the 24th of April, 1738, Pope Clement XII. issued his bull forbidding the practise of Freemasonry by the members of the Roman Catholic Church. Many of the Masons of Italy continued, however, to meet; but, for the purpose of escaping the temporal penalties of the bull, which extended, in some cases, to the infliction of capital punishment, they changed their esoteric name, and called themselves *Xerophagists*. This is a compound of two Greek words signifying "eaters of dry food," and by it they alluded to an engagement into which they entered to abstain from the drinking of wine. They were, in fact, the first temperance society on record. Thory says (*Act. Lat.*, i., 346) that a manuscript concerning them was contained in the collection of the Mother Lodge of the Philosophic Scottish Rite.

Xerxes. A significant word in the degree of Sublime Prince of the Royal Secret, the Thirty-second of the Ancient and Accepted Scottish Rite. He is referred to in the old rituals of that degree as represented by Frederick the Great, the supposed founder of the Rite. Probably this is on account of the great military genius of both.

Xinxe. A significant word in the high degrees. Delaunay (*Tuileur*, p. 49) gives it as *Xincheu*, and says that it has been translated as "the seat of the soul." But in either form it has evidently undergone such corruption as to be no longer comprehensible.

Xystus. In ancient architecture a long and open, but sometimes covered, court with porticoes, for athletic exercises.

Xysuthrus. The name of the Babylonish king at the time of the Deluge. According to Berossus, ninth of a race who reigned 432,000 years. Also, Adrahasis of Surippak, son of Ubara-Tutu, the patriarch, to whom, according to the Deluge Tablet, the gods revealed the secret of the impending deluge, and who erected an ark accordingly, whereby he and his family and sevens of all clean beasts were saved. Xysuthrus means "shut up in a box or ark," from the two characters signifying "enclosed," and "box," respectively. In Accadian he is called Tamsi (Tammuz), "The sun of life."

Y

Y. The twenty-fifth letter of the English alphabet, derived from the Greek Υ.

One of the symbols of Pythagoras was the Greek letter *Upsilon*, Υ, for which, on account of the similarity of shape, the Romans adopted the letter Y of their own alphabet. Pythagoras said that the two horns of the letter symbolized the two different paths of virtue and vice, the right branch leading to the former and the left to the latter. It was therefore called "Litera Pythagoræ," the letter of Pythagoras. Thus the Roman poet Martial says, in one of his epigrams:

> "Litera Pythagoræ, discrimine secta bicorni,
> Humanæ vitæ speciem præferre videtur."

i. e.,

> "The letter of Pythagoras, parted by its two-branched division, appears to exhibit the image of human life."

Yaksha. The name of a class of demigods in Hindu mythology, whose care is to attend on Kuvera, the god of riches, and see to his garden and treasures.

Yalla. A word said to have been used by the Templars in the adoration of the Baphometus, and derived from the Saracens.

Yama. (Sankr. *Yama*, a twin.) According to the Hindu mythology, the judge and ruler of the departed; the Hindu Pluto, or king of the infernal regions; originally conceived of as one of the first pair from whom the human race is descended, and the beneficent sovereign of his descendants in the abodes of the blest; later, a terrible deity, the tormentor of the wicked. He is represented of a green color, with red garments, having a crown on his head, his eyes inflamed, and sitting on a buffalo, with a club in his hand.

Yates, Giles Fonda. The task of writing a sketch of the life of Giles Fonda Yates is accompanied with a feeling of melancholy, because it brings to my mind the recollections of years, now passed forever, in which I enjoyed the intimate friendship of that amiable man and zealous Mason and scholar. His gentle mien won the love, his virtuous life the esteem, and his profound but unobtrusive scholarship the respect, of all who knew him.

Giles Fonda Yates was born in 1796, in what was then the village of Schenectady, in the State of New York. After acquiring at the ordinary schools of the period a preliminary liberal education, he entered Union College, and graduated with distinction, receiving in due time the degree of Master of Arts.

He subsequently commenced the study of the law, and, having been admitted to the bar, was, while yet young, appointed Judge of Probate in Schenectady, the duties of which office he discharged with great ability and fidelity.

Being blessed with a sufficient competency of the world's goods (although in the latter years of his life he became poor), Bro. Yates did not find it necessary to pursue the practise of the legal profession as a source of livelihood.

At an early period he was attracted, by the bent of his mind, to the study not only of general literature, but especially to that of archeology, philosophy, and the occult sciences, of all of which he became an ardent investigator. These studies led him naturally to the Masonic Institution, into which he was initiated in the year 1817, receiving the degrees of Symbolic Masonry in St. George's Lodge, No. 6, at Schenectady. In 1821 he affiliated with Morton Lodge, No. 87, of the same place, and was shortly afterward elected its Senior Warden. Returning subsequently to the Lodge of his adoption, he was chosen as its Master in 1844. He had in the meantime been admitted into a Chapter of the Royal Arch and an Encampment of Knights Templar; but his predilections being for Scottish Masonry, he paid little attention to these high degrees of the American Rite.

He held several important positions in the A. and A. S. Rite, being elected Sovereign Grand Commander of the Supreme Council in 1851, but soon resigned. He died December 13, 1859.

Yaveron Hamaim. A significant word in the high degrees. The French rituals explain it as meaning "the passage of the river," and refer it to the crossing of the river Euphrates by the liberated Jewish captives on their return from Babylon to Jerusalem to rebuild the Temple. It is in its present form a corruption of the Hebrew sentence, יעברו המים, *yavaru hamaim*, which signifies "they will cross, or pass over, the waters," alluding to the streams lying between Babylon and Jerusalem, of which the Euphrates was the most important.

Year, Hebrew. The same as the *Year of the World*, which see.

Year of Light. *Anno Lucis*, in the year of light, is the epoch used in Masonic documents of the Symbolic degrees. This era is calculated from the creation of the world, and is obtained by adding four thousand to the current year, on the supposition that Christ was born four thousand years after the creation of the world. But the chronology of Archbishop Usher, which has been adopted as the Bible chronology in the authorized version, places the birth of Christ in the year 4004 after the creation. According to this calculation, the Masonic date for the "year of light" is four years short of the true date, and the year of the Lord 1874, which in Masonic documents is 5874, should correctly be 5878. The Ancient and Accepted Masons in the beginning of this century used this correct or Usherian era,

and the Supreme Council at Charleston dated their first circular, issued in 1802, as 5806. Dalcho (*Ahim. Rez.*, 2d ed., p. 37) says: "If Masons are determined to fix the origin of their Order at the time of the creation, they should agree among themselves at what time before Christ to place that epoch." At that agreement they have now arrived. Whatever differences may have once existed, there is now a general consent to adopt the incorrect theory that the world was created 4000 B.C. The error is too unimportant, and the practise too universal, to expect that it will ever be corrected.

Noorthouck (*Constitutions*, 1784, p. 5), speaking of the necessity of adding the four years to make a correct date, says: "But this being a degree of accuracy that Masons in general do not attend to, we must, after this intimation, still follow the vulgar mode of computation to be intelligible."

As to the meaning of the expression, it is by no means to be supposed that Masons, now, intend by such a date to assume that their Order is as old as the creation. It is simply used as expressive of reverence for that physical light which was created by the fiat of the Grand Architect, and which is adopted as the type of the intellectual light of Masonry. The phrase is altogether symbolic.

Year of Masonry. Sometimes used as synonymous with *Year of Light*. In the eighteenth century, it was in fact the more frequent expression.

Year of the Deposite. An era adopted by Royal and Select Masters, and refers to the time when certain important secrets were deposited in the first Temple. (See *Anno Depositionis*.)

Year of the Discovery. An era adopted by Royal Arch Masons, and refers to the time when certain secrets were made known to the Craft at the building of the second Temple. (See *Anno Inventionis*.)

Year of the Order. The date used in documents connected with Masonic Templarism. It refers to the establishment of the Order of Knights Templar in the year 1118. (See *Anno Ordinis*.)

Year of the World. This is the era adopted by the Ancient and Accepted Scottish Rite and is borrowed from the Jewish computation. The Jews formerly used the era of contracts, dated from the first conquests of Seleucus Nicator in Syria. But since the fifteenth century they have counted from the creation, which they suppose to have taken place in September, 3760 before Christ. (See *Anno Mundi*.)

Yeas and Nays. The rule existing in all parliamentary bodies that a vote may be called for "by yeas and nays," so that the vote of each member may be known and recorded, does not apply to Masonic Lodges. Indeed, such a proceeding would be unnecessary. The vote by yeas and nays in a representative body is taken that the members may be held responsible to their constituents. But in a Lodge, each member is wholly independent of any responsibility, except to his own conscience. To call for the yeas and nays being then repugnant to the principles which govern Lodges, to call for them would be out of order, and such a call could not be entertained by the presiding officer.

But in a Grand Lodge the responsibility of the members to a constituency does exist, and there it is very usual to call for a vote by Lodges, when the vote of every member is recorded. Although the mode of calling for the vote is different, the vote by Lodges is actually the same as a vote by yeas and nays, and may be demanded by any member.

Yeldis. An old Hermetic degree, which Thory says was given in some secret societies in Germany.

Yellow. Of all the colors, yellow seems to be the least important and the least general in Masonic symbolism. In other institutions it would have the same insignificance, were it not that it has been adopted as the representative of the sun, and of the noble metal gold. Thus, in colored blazonry, the small dots, by which the gold in an engraved coat of arms is designated, are replaced by the yellow color. La Colombiere, a French heraldic writer, says (*Science Heroique*, p. 30), in remarking on the connection between gold and yellow, that as yellow, which is derived from the sun, is the most exalted of colors; so gold is the most noble of metals. Portal (*Des Couleurs Symboliques*, p. 64) says that the sun, gold, and yellow are not synonymous, but mark different degrees which it is difficult to define. The natural sun was the symbol of the spiritual sun, gold represented the natural sun, and yellow was the emblem of gold. But it is evident that yellow derives all its significance as a symbolic color from its connection with the hue of the rays of the sun and the metal gold.

Among the ancients, the Divine light or wisdom was represented by yellow, as the Divine heat or power was by red. And this appears to be about the whole of the ancient symbolism of this color.

In the old ritual of the Scottish and Hermetic degree of Knight of the Sun, yellow was the symbol of wisdom darting its rays, like the yellow beams of the morning, to enlighten a waking world. In the Prince of Jerusalem, it was also formerly the characteristic color, perhaps with the same meaning, in reference to the elevated position that that degree occupied in the Rite of Perfection, and afterward in the Ancient and Accepted Rite.

Thirty or forty years ago, yellow was the characteristic color of the Mark Master's Degree, derived, perhaps, from the color of the Princes of Jerusalem, who originally issued charters for Mark Lodges; for it does not seem to have possessed any symbolic meaning.

In fact, as has been already intimated, all the symbolism of yellow must be referred

to and explained by the symbolism of gold and of the sun, of which it is simply the representative.

Yellow Caps, Society of. The name of a society said to have been founded by Ling-Ti, in China, in the eleventh century.

Yellow Jacket. Prichard says that in the early part of the last century the following formed a part of the Catechism:

"Have you seen your Master to-day?

"Yes.

"How was he cloathed?

"In a yellow jacket and a blue pair of breeches."

And he explains it by saying that "the yellow jacket is the compasses, and the blue breeches the steel points."

On this Krause (*Kunsturk*, ii., 78) remarks that this sportive comparison is altogether in the puerile spirit of the peculiar interrogatories which are found among many other crafts, and is without doubt genuine as originating in the working Lodges. Prichard's explanation is natural, and Krause's remark correct. But it is vain to attempt to elevate the idea by attaching to it a symbolism of gold and azure—the blue sky and the meridian sun. No such thought entered into the minds of the illiterate operatives with whom the question and answer originated.

Yevele, Henry. He was one of the Magistri Operis, or Masters of the Work, in the reign of Edward III., for whom he constructed several public edifices. Anderson says that he is called, "in the Old Records, the King's Freemason" (*Constitutions*, 1738, p. 70); but his name does not occur in any of the old manuscript Constitutions that are now extant.

Yezdegerdian. Pertaining to the era of Yezdegerd, the last Sassanian monarch of Persia, who was overthrown by the Mohammedans. The era is still used by the Parsees, and began 16th of June, 632 A.D.

Yezidee. One of a sect bordering on the Euphrates, whose religious worship mixes up the Devil with some of the doctrines of the Magi, Mohammedans, and Christians.

Yggdrasil. The name given in Scandinavian mythology to the greatest and most sacred of all trees, which was conceived as binding together heaven, earth, and hell. It is an ash, whose branches spread over all the world, and reach above the heavens. It sends out three roots in as many different directions: one to the Asa-gods in heaven, another to the Frost-giants, the third to the under-world. Under each root springs a wonderful fountain, endowed with marvelous virtues. From the tree itself springs a honey-dew. The serpent, Nithhöggr, lies at the under-world fountain and gnaws the root of Yggdrasil; the squirrel, Ratatoskr, runs up and down, and tries to breed strife between the serpent and the eagle, which sits aloft. Dr. Oliver (*Signs and Symbols*, p. 155) considers it to have been the Theological Ladder of the Gothic mysteries.

Y-ha-ho. Higgins (*Anacalypsis*, ii., 17) cites the Abbé Bazin as saying that this was the name esteemed most sacred among the ancient Egyptians. Clement of Alexandria asserts, in his *Stromata*, that all those who entered into the temple of Serapis were obliged to wear conspicuously on their persons the name *I-ha-ho*, which he says signifies *the Eternal God*. The resemblance to the Tetragrammaton is apparent.

Yod. The Hebrew letter י, equivalent in sound to I or Y. It is the initial letter of the word יהוה, or Jehovah, the Tetragrammaton, and hence was peculiarly sacred among the Talmudists. Basnage (lib. iii., c. 13), while treating of the mysteries of the name Jehovah among the Jews, says of this letter:

"The *yod* in Jehovah is one of those things which eye hath not seen, but which has been concealed from all mankind. Its essence and matter are incomprehensible; it is not lawful so much as to meditate upon it. Man may lawfully revolve his thoughts from one end of the heavens to the other, but he cannot approach that inaccessible light, that primitive existence, contained in the letter *yod;* and indeed the masters call the letter thought or idea, and prescribe no bounds to its efficacy. It was this letter which, flowing from the primitive light, gave being to emanations. It wearied itself by the way, but assumed a new vigor by the sense of the letter ה, which makes the second letter of the Ineffable Name."

In Symbolic Masonry, the *yod* has been replaced by the letter G. But in the high degrees it is retained, and within a triangle, thus, constitutes the symbol of the Deity.

Yoni. Among the Orientalists, the yoni was the female symbol corresponding to the lingam, or male principle. The lingam and yoni of the East assumed the names of Phallus and Cteis among the Greeks.

York Constitutions. This document, which is also called Krause's MS., purports to be the Constitutions adopted by the General Assembly of Masons that was held at York in 926. (See *York Legend.*) No original manuscript copy of it can be found, but a German translation from a Latin version was published, for the first time, by Krause in *Die drei ältesten Kunsturkunden der Freimaurerbrüderschaft*. It will be found in the third edition of that work (vol. iii., pp. 58–101). Krause's account of it is, that it was translated from the original, which is said, in a certificate dated January 4, 1806, and signed "Stonehouse," to have been written on parchment in the ancient language of the country, and preserved at the city of York, "apud Rev. summam societatem architectonicam," which Woodford translates "an architectural society," but which is evidently meant for the "Grand Lodge." From this Latin translation a German version was made in 1808 by Bro. Schneider of Altenberg, the correctness of which, having been examined by three linguists, is

certified by Carl Erdmann Weller, Secretary of the Government Tribunal of Saxony. And it is this certified German translation that has been published by Krause in his *Kunsturkunden*. An English version was inserted by Bro. Hughan in his *Old Charges of British Freemasons*. The document consists, like all the old manuscripts, of an introductory invocation, a history of architecture or the "Legend of the Craft," and the general statutes or charges; but several of the charges differ from those in the other Constitutions. There is, however, a general resemblance sufficient to indicate a common origin. The appearance of this document gave rise in Germany to discussions as to its authenticity. Krause, Schneider, Fessler, and many other distinguished Masons, believed it to be genuine; while Kloss denied it, and contended that the Latin translation which was certified by Stonehouse had been prepared before 1806, and that in preparing it an ancient manuscript had been remodeled on the basis of the 1738 edition of Anderson's *Constitutions*, because the term "Noachida" is employed in both, but is found nowhere else. At length, in 1864, Bro. Findel was sent by the "Society of German Masons" to England to discover the original. His report of his journey was that it was negative in its results; no such document was to be found in the archives of the old Lodge at York, and no such person as Stonehouse was known in that city. These two facts, to which may be added the further arguments that no mention is made of it in the *Fabric Rolls of York Minster*, published by the Surtees Society, nor in the inventory of the Grand Lodge of York which was extant in 1777, nor by Drake in his speech delivered before the Grand Lodge in 1726, and a few other reasons, have led Findel to agree with Kloss that the document is not a genuine York Charter. Such, too, is the general opinion of English Masonic scholars. (See Gould's *Hist. of F. M.*, i., pp. 494–6.) There can be little doubt that the General Assembly at York, in 926, did frame a body of laws or Constitutions; but there is almost as little doubt that they are not represented by the Stonehouse or Krause document.

York, Edward Augustus, Duke of. Initiated a Mason in 1766.

York, Frederick, Duke of. Initiated a Mason in "Britannia Lodge," London, November 21, 1787. A commemorative Masonic token was issued in 1795; the Duke of York having been installed W. M. of the "Prince of Wales Lodge," March 22, 1793.

York Grand Lodge. Bro. Woodford says this is a short title for "The Grand Lodge of all England," held at York, which was formed from an old Lodge, in 1725, at work evidently during the seventeenth century, and probably much earlier. The annual assembly was held in the city of York by the Masons for centuries, and is so acknowledged virtually by all the MSS. from the fourteenth century. A list of Master Masons of the York Minster, during its erection, is preserved, of the fourteenth century; and legend and actual history agree in the fact that York was the home of the Mason-craft until modern times—the "Charter of Prince Edwin" being one of the earliest traditions. The Grand Lodge preserved its position in the north of England until 1792, when it finally died out, it having constituted other Lodges, and a "Grand Lodge, south of the Trent" (at London). All of the "York" Lodges succumbed on the decease of their "Mother Grand Lodge." There has not been a representative of the Ancient York Grand Lodge anywhere whatever throughout this century.

York Legend. The city of York, in the north of England, is celebrated for its traditional connection with Masonry in that kingdom. No topic in the history of Freemasonry has so much engaged the attention of modern Masonic scholars, or given occasion to more discussion, than the alleged facts of the existence of Masonry in the tenth century at the city of York as a prominent point, of the calling of a congregation of the Craft there in the year 926, of the organization of a General Assembly and the adoption of a Constitution. During the whole of the last and the greater part of the present century, the Fraternity in general have accepted all of these statements as genuine portions of authentic history; and the adversaries of the Order have, with the same want of discrimination, rejected them all as myths; while a few earnest seekers for truth have been at a loss to determine what part was historical and what part legendary. Recently, the discovery of many old manuscripts has directed the labors of such scholars as Hughan, Woodford, Lyon, and others, to the critical examination of the early history of Masonry, and that of York has particularly engaged their attention.

For a thorough comprehension of the true merits of this question, it will be necessary that the student should first acquaint himself with what was, until recently, the recognized theory as to the origin of Masonry at York, and then that he should examine the newer hypotheses advanced by the writers of the present day. In other words, he must read both the tradition and the history.

In pursuance of this plan, I propose to commence with the legends of York Masonry, as found in the old manuscript Constitutions, and then proceed to a review of what has been the result of recent investigations. It may be premised that, of all those who have subjected these legends to the crucible of historical criticism, Bro. William James Hughan of Cornwall, in England, must unhesitatingly be acknowledged as "facile princeps," the ablest, the most laborious, and the most trustworthy investigator. He was the first and the most successful remover of the cloud of tra-

dition which so long had obscured the sunlight of history.

The legend which connects the origin of English Masonry at York in 926 is sometimes called the "York Legend," sometimes the "Athelstane Legend," because the General Assembly, said to have been held there, occurred during the reign of that king; and sometimes the "Edwin Legend," because that prince is supposed to have been at the head of the Craft, and to have convoked them together to form a Constitution.

The earliest extant of the old manuscript Constitutions is the ancient poem commonly known as the Halliwell MS., and the date of which is conjectured (on good grounds) to be about the year 1390. In that work we find the following version of the legend:

"Thys craft com ynto Englond as y yow say,
Yn tyme of good kynge Adelstonus' day;
He made tho bothe halle and eke bowre,
And hye templus of gret honowre,
To sportyn him yn bothe day and nygth,
An to worschepe hys God with alle hys mygth.
Thys goode lorde loved thys craft ful wel,
And purposud to strenthyn hyt every del,
For dyvers defawtys that yn the craft he fonde;
He sende aboute ynto the londe
After alle the masonus of the crafte,
To come to hym ful evene strayfte,
For to amende these defautys alle
By good consel gef hyt mytgth falle.
A semblé thenne he cowthe let make
Of dyvers lordis yn here state
Dukys, erlys, and barnes also,
Knygthys, sqwyers and mony mo,
And the grete burges of that syté,
They were ther alle yn here degré;
These were there uchon algate,
To ordeyne for these masonus astate,
Ther they sowgton by here wytte
How they mygthyn governe hytte:
Fyftene artyculus they there sowgton,
And fyftene poyntys ther they wrogton."

For the benefit of those who are not familiar with this archaic style, the passage is translated into modern English.

"This craft came into England, as I tell you, in the time of good king Athelstan's reign; he made then both hall, and also bower and lofty temples of great honor, to take his recreation in both day and night, and to worship his God with all his might. This good lord loved this craft full well, and purposed to strengthen it in every part on account of various defects that he discovered in the craft. He sent about into all the land, after all the masons of the craft, to come straight to him, to amend all these defects by good counsel, if it might so happen. He then permitted an assembly to be made of divers lords in their rank, dukes, earls, and barons, also knights, squires, and many more, and the great burgesses of that city, they were all there in their degree; these were there, each one in every way to make laws for the estate of these masons. There they sought by their wisdom how they might govern it; there they found out fifteen articles, and there they made fifteen points."

The next old document in which we find this legend recited is that known as the "Cooke MS.," whose date is placed at 1490. The details are here much more full than those contained in the Halliwell MS. The passage referring to the legend is as follows:

"And after that was a worthy kynge in Englond, that was callyd Athelstone, and his yongest son lovyd well the sciens of Gemetry, and he wyst well that hand craft had the practyke of the sciens of Gemetry so well as masons; wherefore he drew him to consell and lernyd [the] practyke of that sciens to his speculatyf. For of speculatyfe he was a master, and he lovyd well masonry and masons. And he bicome a mason hymselfe. And he gaf hem [gave them] charges and names as it is now usyd in Englond and in other countries. And he ordeyned that they schulde have resonabull pay. And purchesed [obtained] a fre patent of the kyng that they schulde make a sembly when thei sawe resonably tyme a [to] cum togedir to her [their] counsell of the whiche charges, manors & semble as is write and taught in the boke of our charges wherefor I leve hit at this tyme."

Thus much is contained in the MS. from lines 611 to 642. Subsequently, in lines 688–719, which appear to have been taken from what is above called the "Boke of Charges," the legend is repeated in these words:

"In this manner was the forsayde art begunne in the lond of Egypt bi the forsayd maister Euglat [Euclid], & so hit went fro lond to londe and fro kyngdome to kyngdome. After that, many yeris, in the tyme of Kyng Adhelstone, wiche was sum tyme kynge of Englonde, bi his counsell and other gret lordys of the lond bi comin [common] assent for grete defaut y-fennde [found] among masons thei ordeyned a certayne reu'e amongys hem [them]. On [one] tyme of the yere or in iii yere, as nede were to the kyng and gret lordys of the londe and all the comente [community], fro provynce to provynce and fro countre to countre congregacions scholde be made by maisters, of all maisters masons and felaus in the forsayd art. And so at such congregacions they that be made masters schold be examined of the articuls after written, & be ransacked [thoroughly examined] whether thei be abull and kunnyng [able and skilful] to the profyte of the lordys hem to serve [to serve them], and to the honor of the forsayd art."

Seventy years later, in 1560, the Lansdowne MS. was written, and in it we find the legend still further developed, and Prince Edwin for the first time introduced by name. That manuscript reads thus:

"Soone after the Decease of St. Albones, there came Diverse Warrs into England out of Diverse Nations, so that the good rule of Masons was dishired [disturbed] and put down until the tyme of King Adilston. In his tyme there was a worthy King in England, that brought this Land into good rest, and he builded many great workes and buildings,

therefore he loved well Masons, for he had a sone called Edwin, the which Loved Masons much more than his Father did, and he was soe practized in Geometry, that he delighted much to come and talke with Masons and to learne of them the Craft. And after, for the love he had to Masons and to the Craft, he was made Mason at Windsor, and he gott of the King, his Father, a Charter and commission once every yeare to have Assembley, within the Realme where they would within England, and to correct within themselves Faults & Tresspasses that were done as touching the Craft, and he held them an Assembley, and there he made Masons and gave them Charges, and taught them the Manners and Comands the same to be kept ever afterwards. And tooke them the Charter and commission to keep their Assembly, and Ordained that it should be renewed from King to King, and when the Assembly were gathered togeather he made a Cry, that all old Masons or young, that had any Writeings or Vnderstanding of the Charges and manners that weere made before their Lands, wheresoever they were made Masons, that they should shew them forth, there were found some in French, some in Greek, some in Hebrew, and some in English, and some in other Languages, and when they were read and over seen well the intent of them was vnderstood to be all one, and then he caused a Book to be made thereof how this worthy Craft of Masonrie was first founded, and he himselfe comanded, and also then caused, that it should be read at any tyme when it should happen any Mason or Masons to be made to give him or them their Charges, and from that, until this Day, Manners of Masons have been kept in this Manner and forme, as well as Men might Governe it, and Furthermore at diverse Assemblyes have been put and Ordained diverse Charges by the best advice of Masters and Fellows."

All the subsequent manuscripts contain the legend substantially as it is in the Lansdowne; and most of them appear to be mere copies of it, or, most probably, of some original one of which both they and it are copies.

In 1723 Dr. Anderson published the first edition of the *Book of Constitutions*, in which the history of the Fraternity of Freemasons is, he says, "collected from their general records and their faithful traditions of many ages." He gives the legend taken, as he says, from "a certain record of Freemasons written in the reign of King Edward IV.," which manuscript, Preston asserts, "is said to have been in the possession of the famous Elias Ashmole." As the old manuscripts were generally inaccessible to the Fraternity (and, indeed, until recently but few of them have been discovered), it is to the publication of the legend by Anderson, and subsequently by Preston, that we are to attribute its general adoption by the Craft for more than a century and a half. The form of the legend, as given by Anderson in his first edition, varies slightly from that in his second. In the former, he places the date of the occurrence at 930; in his second, at 926: in the former, he styles the congregation at York a General Lodge; in his second, a Grand Lodge. Now, as the modern and universally accepted form of the legend agrees in both respects with the latter statement, and not with the former, it must be concluded that the second edition, and the subsequent ones by Entick and Noorthouck who only repeat Anderson, furnished the form of the legend as now popular.

In the second edition of the *Constitutions* (p. 63), published in 1738, Anderson gives the legend in the following words:

"In all the Old Constitutions it is written to this purpose, viz.:

"That though the antient records of the Brotherhood in England were most of them destroyd or lost in the war with the Danes, who burnt the Monasteries where the Records were kept; yet King Athelstan, (the Grandson of King Alfred,) the first annointed King of England, who translated the Holy Bible into the Saxon language, when he had brought the land into rest and peace, built many great works, and encouraged many Masons from France and elsewhere, whom he appointed overseers thereof: they brought with them the Charges and Regulations of the foreign Lodges, and prevail'd with the King to increase the wages.

"That Prince Edwin, the King's Brother, being taught Geometry and Masonry, for the love he had to the said Craft, and to the honorable princip es whereon it is grounded, purchased a Free Charter of King Athelstan his Brother, for the Free Masons having among themselves a Connection or a power and freedom to regulate themselves to amend what might happen amiss and to hold an yearly Communication in a General Assembly.

"That accordingly Prince Edwin summon'd all the Free and Accepted Masons in the Realm, to meet him in the Congregation at York, who came and form'd the Grand Lodge under him as their Grand Master, A. D. 926.

"That they brought with them many old Writings and Records of the Craft, some in Greek, some in Latin, some in French, and other languages; and from the contents thereof, they framed the CONSTITUTIONS of the English Lodges, and made a Law for themselves, to preserve and observe the same in all Time coming, etc., etc., etc."

Preston accepted the legend, and gave it in his second edition (p. 198) in the following words:

"Edward died in 924, and was succeeded by Athelstane his son, who appointed his brother Edwin patron of the Masons. This prince procured a Charter from Athelstane, empowering them to meet annually in communication at York. In this city, the first Grand Lodge of England was formed in 926, at which Edwin presided as Grand Master. Here many old writings were produced in Greek, Latin, and other languages, from which it is said the Constitutions of the English Lodge have been extracted."

Such is the "York Legend," as it has been accepted by the Craft, contained in all the old manuscripts from at least the end of the fourteenth century to the present day; officially sanctioned by Anderson, the historiographer of the Grand Lodge in 1723, and repeated by Preston, by Oliver, and by almost all succeeding Masonic writers. Only recently has anyone thought of doubting its authenticity; and now the important question in Masonic literature is whether it is a myth or a history —whether it is all or in any part fiction or truth—and if so, what portion belongs to the former and what to the latter category. In coming to a conclusion on this subject, the question necessarily divides itself into three forms:

1. Was there an Assembly of Masons held in or about the year 926, at York, under the patronage or by the permission of King Athelstan?

There is nothing in the personal character or the political conduct of Athelstan that forbids such a possibility or even probability. He was liberal in his ideas, like his grandfather the great Alfred; he was a promoter of civilization; he patronized learning, built many churches and monasteries, encouraged the translation of the Scriptures, and gave charters to many operative companies. In his reign, the "frith-*gildan*," free gilds or sodalities, were incorporated by law. There is, therefore, nothing improbable in supposing that he extended his protection to the Operative Masons. The uninterrupted existence for several centuries of a tradition that such an Assembly was held, requires that those who deny it should furnish some more satisfactory reason for their opinion than has yet been produced. "Incredulity," says Voltaire, "is the foundation of history." But it must be confessed that, while an excess of credulity often mistakes fable for reality, an obstinacy of incredulity as frequently leads to the rejection of truth as fiction. The Rev. Mr. Woodford, in an essay on *The Connection of York with the History of Freemasonry in England*, inserted in Hughan's *Unpublished Records of the Craft*, has critically discussed this subject, and comes to this conclusion. "I see no reason, therefore, to reject so old a tradition, that under Athelstan the Operative Masons obtained his patronage, and met in General Assembly." To that verdict I subscribe.

2. Was Edwin, the brother of Athelstan, the person who convoked that Assembly? This question has already been discussed in the article *Edwin*, where the suggestion is made that the Edwin alluded to in the legend was not the son or brother of Athelstan, but Edwin, King of Northumbria. Francis Drake, in his speech before the Grand Lodge of York in 1726, was, I think, the first who publicly advanced this opinion; but he does so in a way that shows that the view must have been generally accepted by his auditors, and not advanced by him as something new. He says: "You know we can boast that the first Grand Lodge ever held in England was held in this city, where Edwin, the first Christian king of Northumbria, about the six hundredth year after Christ, and who laid the foundation of our Cathedral, sat as Grand Master."

Edwin, who was born in 586, ascended the throne in 617, and died in 633. He was pre-eminent, among the Anglo-Saxon kings who were his contemporaries, for military genius and statesmanship. So inflexible was his administration of justice, that it was said that in his reign a woman or child might carry everywhere a purse of gold without danger of robbery—high commendation in those days of almost unbridled rapine. The chief event of the reign of Edwin was the introduction of Christianity into the kingdom of Northumbria. Previous to his reign, the northern metropolis of the Church had been placed at York, and the king patronized Paulinus the bishop, giving him a house and other possessions in that city. The only objection to this theory is its date, which is three hundred years before the reign of Athelstan and the supposed meeting at York in 926.

3. Are the Constitutions which were adopted by that General Assembly now extant? It is not to be doubted, that if a General Assembly was held, it must have adopted Constitutions or regulations for the government of the Craft. Such would mainly be the object of the meeting. But there is no sufficient evidence that the Regulations now called the "York Constitutions," or the "Gothic Constitutions," are those that were adopted in 926. It is more probable that the original document and all genuine copies of it are lost, and that it formed the type from which all the more modern manuscript Constitutions have been formed. There is the strongest internal evidence that all the manuscripts, from the Halliwell to the Papworth, had a common original, from which they were copied with more or less accuracy, or on which they were framed with more or less modification. And this original I suppose to be the Constitutions which must have been adopted at the General Assembly at York.

The theory, then, which I think may safely be advanced on this subject, and which must be maintained until there are better reasons than we now have to reject it, is, that about the year 926 a General Assembly of Masons was held at York, under the patronage of Edwin, brother of Athelstan, at which Assembly a code of laws was adopted, which became the basis on which all subsequent Masonic Constitutions were framed.

York Manuscripts. Originally there were six manuscripts of the *Old Constitutions* bearing this title, because they were deposited in the Archives of the now extinct Grand Lodge of all England, whose seat was at the city of York. But the MS. No. 3 is now missing, although it is mentioned in the inventory made at York in 1779. Nos. 2, 4, and 5 are now in possession of the York Lodge. Recently Bro. Hughan discovered Nos. 2 and 6 in the Archives of the Grand Lodge of England, at London. The dates of these manu-

scripts, which do not correspond with the number of their titles, are as follows:

No. 1 has the date of 1600.
" 2 " " 1704.
" 3 " " 1630.
" 4 " " 1693.
" 5 is undated, but is supposed to be about 1670.
" 6 also is undated, but is considered to be about 1680.

Of these MSS. all but No. 3 have been published by the late Bro. W. J. Hughan in his *Ancient York Masonic Rolls*. (1894.) Bro. Hughan deems No. 4 of some importance because it contains the following sentence: "The one of the elders takeing the Booke, and that *hee* or *shee* that is to be made mason shall lay their hands thereon, and the charge shall bee given." This, he thinks, affords some presumption that women were admitted as members of the old Masonic gilds, although he admits that we possess no other evidence confirmatory of this theory. The truth is, that the sentence was a translation of the same clause written in other *Old Constitutions* in Latin. In the York MS., No. 1, the sentence is thus: "Tunc unus ex senioribus teneat librum et *ille* vel *illi*," etc., i. e., "*he* or *they*." The writer of No. 4 copied, most probably, from No. 1, and his translation of "*hee* or *shee*" from "*ille* vel *illi*," instead of "*he* or *they*," was either the result of ignorance in mistaking *illi*, they, for *illa*, she, or of carelessness in writing *shee* for *they*. It is evident that the charges thus to be sworn to, and which immediately follow, were of such a nature as made most of them physically impossible for women to perform; nor are females alluded to in any other of the manuscripts. All Masons there are "Fellows," and are so to be addressed.

There are two other York Manuscripts of the Operative Masons, which have been published in the *Fabric Rolls of York Minster*, an invaluable work, edited by the Rev. James Raine, and issued under the patronage and at the expense of the Surtees Society.

York Rite. This is the oldest of all the Rites, and consisted originally of only three degrees: 1. Entered Apprentice; 2. Fellow-Craft; 3. Master Mason. The last included a part which contained the True Word, but which was disrupted from it by Dunckerley in the latter part of the last century, and has never been restored. The Rite in its purity does not now exist anywhere. The nearest approach to it is the St. John's Masonry of Scotland, but the Master's Degree of the Grand Lodge of Scotland is not the Master's Degree of the York Rite. When Dunckerley dismembered the Third Degree, he destroyed the identity of the Rite. In 1813, it was apparently recognized by the United Grand Lodge of England, when it defined "pure Ancient Masonry to consist of three degrees, and no more: viz., those of the Entered Apprentice, the Fellow Craft, and the Master Mason, including the Supreme Order of the Holy Royal Arch." Had the Grand Lodge abolished the Royal Arch Degree, which was then practised as an independent Order in England, and reincorporated its secrets in the degree of Master Mason, the York Rite would have been revived. But by recognizing the Royal Arch as a separate degree, and retaining the Master's Degree in its mutilated form, they repudiated the Rite. In the United States it has been the almost universal usage to call the Masonry there practised the York Rite. But it has no better claim to this designation than it has to be called the Ancient and Accepted Rite, or the French Rite, or the Rite of Schröder. It has no pretensions to the York Rite. Of its first three degrees, the Master's is the mutilated one which took the Masonry of England out of the York Rite, and it has added to these three degrees six others which were never known to the Ancient York Rite, or that which was practised in England, in the earlier half of the eighteenth century, by the legitimate Grand Lodge. In all my writings for years past, I have ventured to distinguish the Masonry practised in the United States, consisting of nine degrees, as the "American Rite," a title to which it is clearly and justly entitled, as the system is peculiar to America, and is practised in no other country.

Bro. Hughan, speaking of the York Rite (*Unpubl. Rec.*, p. 148), says "there is no such Rite, and what it *was* no one *now* knows." I think that this declaration is too sweeping in its language. He is correct in saying that there is at this time no such Rite. I have just described its decadence; but he is wrong in asserting that we are now ignorant of its character. In using the title, there is no reference to the Grand Lodge of all England, which met for some years during the last century, but rather to the York legend, and to the hypothesis that York was the cradle of English Masonry. The York Rite was that Rite which was most probably organized or modified at the revival in 1717, and practised for fifty years by the Constitutional Grand Lodge of England. It consisted of only the three Symbolic degrees, the last one, or the Master's, containing within itself the secrets now transferred to the Royal Arch. This Rite was carried in its purity to France in 1725, and into America at a later period. About the middle of the eighteenth century the continental Masons, and about the end of it the Americans, began to superimpose upon it those high degrees which, with the necessary mutilation of the third, have given rise to numerous other Rites. But the Ancient York Rite, though no longer cultivated, must remain on the records of history as the oldest and purest of all the Rites.

Yug or **Yuga.** One of the ages, according to Hindu mythology, into which the Hindus divide the duration or existence of the world.

Z

Z. (Heb., ז, *Zain.*) Twenty-sixth and last letter of the English alphabet. In Hebrew the numerical value is seven. This letter was added to the Latin from the Greek in the time of Cicero. The Greek letter is *zeta*, ζ.

Zabud. An historical personage at the court of King Solomon, whose name appears in several of the high degrees. In that of Select Master in the American Rite, it has been corrupted into *Izabud*. He is mentioned in 1 Kings iv. 5, where he is described in the authorized version as being "principal officer and the king's friend." The original is *Zabud ben Nathan cohen regneh hahmelek*, which is literally "Zabud, son of Nathan, a priest, the friend of the king." Adam Clarke says he was "the king's chief favorite, his confidant." Smith (*Dict. Bib.*) says: "This position, if it were an official one, was evidently distinct from that of counsellor, occupied by Ahithophel under David, and had more of the character of private friendship about it." Kitto (*Cyclopæd. Bib. Lit.*) says of Zabud and of his brother Azariah, that their advancement in the household of King Solomon "may doubtless be ascribed not only to the young king's respect for the venerable prophet (their father), who had been his instructor, but to the friendship he had contracted with his sons during the course of education. The office, or rather honor, of 'friend of the king,' we find in all the despotic governments of the East. It gives high power, without the public responsibility which the holding of a regular office in the state necessarily imposes. It implies the possession of the utmost confidence of, and familiar intercourse with, the monarch, to whose person 'the friend' at all times has access, and whose influence is therefore often far greater, even in matters of state, than that of the recognized ministers of government."

This has been fully carried out in the legend of the Select Master's Degree.

Zabulon. The Greek form of Zebulun, the tenth son of Jacob. Delaunay (*Thuilleur*, p. 79) says that some ritualists suppose that it is the true form of the word of which *Jabulum* is a corruption. This is incorrect. Jabulum is a corrupt form of *Giblim*. Zabulon has no connection with the high degrees, except that in the Royal Arch he represents one of the stones in the Pectoral.

Zacchai. (Heb., זכי.) A name applied to the Deity.

Zadkiel. The name of one of the angels of the seven planets, according to the Jewish rabbis—the angel of the planet Jupiter.

Zadok. A personage in some of the Ineffable degrees of the Scottish Rite. In Scripture he is recorded as having been one of the two chief priests in the time of David, Abiathar being the other. He subsequently, by order of David, anointed Solomon to be king, by whom he was rewarded with the post of high priest. Josephus (*Ant.*, x., 8, § 6) says that "Sadoc, the high priest, was the first high priest of the Temple which Solomon built." Yet it has been supposed by some authors, in consequence of his name not being mentioned in the detailed account of the dedication, that he had died before the completion of the Temple.

Zaphnath-paaneah. An Egyptian title given to the patriarch Joseph by the Egyptian king under whom he was viceroy. The name has been interpreted "Revealer of secrets," and is a password in the old rituals of the Scottish Rite.

Zarathustra. The name, in the Zend language, of that great reformer in religion more commonly known to Europeans as *Zoroaster*, which see.

Zarriel. The angel that, in accordance with the Kabbalistical system, governs the sun.

Zarthan. The Zarthan of 1 Kings vii. 46 appears to be the same place as the Zeredathah of 2 Chron. iv. 17. In the Masonic ritual, the latter word is always used. (See *Zeredathah.*)

Zarvan-akar-ana. ("Time without limits.") According to the Parsees, the name of a deity or abstract principle which existed even before the birth of Ahriman and Ormudz.

Zeal. Ever since the revival in 1717 (for it is found in the earliest lectures) it was taught that Apprentices served their Masters with "freedom, fervency, and zeal"; and the symbols of the first two of these virtues were chalk and charcoal. In the oldest rituals, *earthen pan* (which see) was designated as the symbol of zeal; but this was changed by Preston to *clay*, and so it still remains. (See *Fervency* and *Freedom.*)

The instruction to the Operative Mason to serve his Master with freedom, fervency, and zeal—to work for his interests willingly, ardently, and zealously—is easily understood. In its application to Speculative Masonry, for the Master of the Work we substitute the Great Architect of the Universe, and then our zeal, like our freedom and our fervency, is directed to a higher end. The zeal of a Speculative Mason is shown by advancing the morality, and by promoting the happiness of his fellow-creatures.

Zebulon. Son of Jacob and Leah; in the exodus his tribe marched next to Judah and Issachar, and received the territory bounded on the east by the south half of the Lake of Galilee, including Rimmon, Nazareth, and the plain of *Buttauf*, where stood Cana of Galilee. Heb. זבלון, Heaven, or the abode of God. (See *Jabulum.*)

Zechariah. "The son of Iddo," born in Babylonia during the captivity, who joined Zerubbabel on his return to Palestine. A leader and a man of influence, being both priest and prophet.

Zedekiah. A personage in some of the high degrees, whose melancholy fate is de-

scribed in the 2d Book of Kings and in the prophecies of Jeremiah. He was the twentieth and last king of Judah. When Nebuchadnezzar had in his second siege of Jerusalem deposed Jehoiachin, whom he carried as a captive to Babylon, he placed Zedekiah on the throne in his stead. By this act Zedekiah became tributary to the king of the Chaldees, who exacted from him a solemn oath of fidelity and obedience. This oath he observed no longer than till an opportunity occurred of violating it. In the language of the author of the Books of Chronicles, "he rebelled against King Nebuchadnezzar, who had made him swear by God." (2 Chron. xxxvi. 13.)

This course soon brought down upon him the vengeance of the offended monarch, who invaded the land of Judah with an immense army. Remaining himself at Riblah, a town on the northern border of Palestine, he sent the army under his general, Nebuzaradan, to Jerusalem, which was invested by the Babylonian forces. After a siege of about one year, during which the inhabitants endured many hardships, the city was taken by an assault, the Chaldeans entering it through breaches in the northern wall.

It is very natural to suppose, that when the enemy were most pressing in their attack upon the devoted city; when the breach which was to give them entrance had been effected; and when, perhaps, the streets most distant from the Temple were already filled with Chaldean soldiery, a council of his princes and nobles should have been held by Zedekiah in the Temple, to which they had fled for refuge, and that he should ask their advice as to the most feasible method of escape from the impending danger. History, it is true, gives no account of any such assembly; but the written record of these important events which is now extant is very brief, and, as there is every reason to admit the probability of the occurrence, there does not appear to be any historical objection to the introduction of Zedekiah into the legend of the Superexcellent Master's Degree, as having been present and holding a council at the time of the siege. By the advice of this council, Zedekiah attempted to make his escape across the Jordan. But he and his attendants were, says Jeremiah, pursued by the Chaldean army, and overtaken in the plains of Jericho, and carried before Nebuchadnezzar. His sons and his nobles were slain, and, his eyes being put out, he was bound in chains and carried captive to Babylon, where at a later period he died.

Zelator. 1. The First Degree of the German Rose Croix. The title expresses the spirit of emulation which should characterize the neophyte.

2. The First Degree in the First Order of the Rosicrucian Society.

Zemzem. The holy well in Mecca.

Zenana. The inner portion of a gentleman's house in India, devoted to the use of females. In contrast with the front or men's portion, it is devoid of comforts Each woman has a small cell, on the second or third story, fronting on the inner court of the square structure.

Zendavesta. The scriptures of the Zoroastrian religion containing the doctrines of Zoroaster. *Avesta* means the sacred text, and *Zend* the commentary. The work as we now have it is supposed to have been collected by learned priests of the Sassanian period, who translated it into the Pehlevi, or vernacular language of Persia. The greater part of the work was lost during the persecutions by the Mohammedan conquerors of Persia. One only of the books has been preserved, the Vendidad, comprising twenty-two chapters. The Yasna and the Vispered together constitute the collection of fragments which are termed Vendidad Sadé. There is another fragmentary collection called Yesht Sadé. And these constitute all that remain of the original text. So that, however comprehensive the Zendavesta must have been in its original form, the work as it now exists makes but a comparatively small book.

The ancients, to whom it was familiar, as well as the modern Parsees, attribute its authorship to Zoroaster. But Dr. Haug, rightly conceiving that it was not in the power of any one man to have composed so vast a work as it must have been in its original extent, supposes that it was the joint production of the original Zarathustra Sitama and his successors, the high priests of the religion, who assumed the same name.

The Zendavesta is the scripture of the modern Parsee; and hence for the Parsee Mason, of whom there are not a few, it constitutes the Book of the Law, or Trestle-Board. Unfortunately, however, to the Parsee it is a sealed book, for, being written in the old Zend language, which is now extinct, its contents cannot be understood. But the Parsees recognize the Zendavesta as of Divine authority, and say in the Catechism, or Compendium of Doctrines in use among them: "We consider these books as heavenly books, because God sent the tidings of these books to us through the holy prophet Zurthost."

Zenith. That point in the heavens which is vertical to the spectator, and from which a perpendicular line passing through him and extended would reach the center of the earth. All the old documents of the Ancient and Accepted Scottish Rite are dated "under the Celestial Canopy of the Zenith which answers to ——"; the latitude of the place whence the document is issued being then given. The latitude alone is expressed because it indicates the place of the sun's meridian height. The longitude is always omitted, because every place whence such a document is issued is called the Grand East, the one spot where the sun rises. The theory implied is, that although the south of the Lodge may vary, its chief point must always be in the east, the point of sunrising, where longitude begins.

Zennaar. The sacred cord used in the Hindustanee initiation, which writers on ritualism have compared to the Masonic apron.

Between eight and fifteen years of age, every Hindu boy is imperatively required to receive the investiture of the zennaar. The investiture is accompanied by many solemn ceremonies of prayer and sacrifice. After the investiture, the boy is said to have received his second birth, and from that time a Hindu is called by a name which signifies "twice born."

Coleman (*Mythology of the Hindus*, p. 155) thus describes the zennaar:

"The sacred thread must be made by a Brahman. It consists of three strings, each ninety-six hands (forty-eight yards), which are twisted together: it is then folded into three, and again twisted; these are a second time folded into the same number, and tied at each end in knots. It is worn over the left shoulder (next the skin, extending half-way down the right thigh) by the Brahmans, Ketries, and Vaisya castes. The first are usually invested with it at eight years of age, the second at eleven, and the Vaisya at twelve. The period may, from especial causes, be deferred; but it is indispensable that it should be received, or the parties omitting it become outcasts."

Zeraias. One of the three officers appointed by King Solomon to superintend the hewing of the timbers in the forests of Lebanon.

Zerbal. The name of King Solomon's Captain of the Guards, in the degree of Intimate Secretary. No such person is mentioned in Scripture, and it is therefore an invention of the ritualist who fabricated the degree. If derived from Hebrew, its roots will be found in זר, *zer*, an enemy, and בעל, *baal*, and it would signify "an enemy of Baal."

Zeredathah. The name of the place between which and Succoth are the clay grounds where Hiram Abif is said to have cast the brazen utensils for the use of the Temple. (See *Clay Ground*.)

Zerubbabel. In writing the life of Zerubbabel from a Masonic point of view, it is incumbent that reference should be made to the legends as well as to the more strictly historical details of his eventful career. With the traditions of the Royal Arch, and some other of the high degrees, Zerubbabel is not less intimately connected than is Solomon with those of Symbolic or Ancient Craft Masonry. To understand those traditions properly, they must be placed in their appropriate place in the life of him who plays so important a part in them. Some of these legends have the concurrent support of Scripture, some are related by Josephus, and some appear to have no historical foundation. Without, therefore, vouching for their authenticity, they must be recounted, to make the Masonic life of the builder of the second Temple complete.

Zerubbabel, who, in the Book of Ezra, is called "Sheshbazzar, the prince of Judah," was the grandson of that King Jehoiachin, or Jeconiah, who had been deposed by Nebuchadnezzar and carried as a captive to Babylon. In him, therefore, was vested the regal authority, and on him, as such, the command of the returning captives was bestowed by Cyrus, who on that occasion, according to a Masonic tradition, presented to him the sword which Nebuchadnezzar had received from his grandfather, Jehoiachin.

As soon as the decree of the Persian monarch had been promulgated to his Jewish subjects, the tribes of Judah and Benjamin, with the priests and Levites, assembled at Babylon, and prepared to return to Jerusalem, for the purpose of rebuilding the Temple. Some few from the other tribes, whose love of their country and its ancient worship had not been obliterated by the luxuries of the Babylonian court, united with the followers of Zerubbabel, and accompanied him to Jerusalem. The greater number, however, remained; and even of the priests, who were divided into twenty-four courses, only four courses returned, who, however, divided themselves, each class into six, so as again to make up the old number. Cyrus also restored to the Jews the greater part of the sacred vessels of the Temple which had been carried away by Nebuchadnezzar, and five thousand and four hundred were received by Zerubbabel, the remainder being brought back, many years after, by Ezra. Only forty-two thousand three hundred and sixty Israelites, exclusive of servants and slaves, accompanied Zerubbabel, out of whom he selected seven thousand of the most valiant, whom he placed as an advanced guard at the head of the people. Their progress homeward was not altogether unattended with danger; for tradition informs us that at the river Euphrates they were opposed by the Assyrians, who, incited by the temptation of the vast amount of golden vessels which they were carrying, drew up in hostile array, and, notwithstanding the remonstrances of the Jews, and the edict of Cyrus, disputed their passage. Zerubbabel, however, repulsed the enemy with such ardor as to insure a signal victory, most of the Assyrians having been slain in the battle, or drowned in their attempt to cross the river in their retreat. The rest of the journey was uninterrupted, and, after a march of four months, Zerubbabel arrived at Jerusalem, with his weary followers, at seven o'clock in the morning of the 22d of June, five hundred and thirty-five years before Christ.

During their captivity, the Jews had continued, without intermission, to practise the rights of Freemasonry, and had established at various places regular Lodges in Chaldea. Especially, according to the Rabbinical traditions, had they instituted their mystic fraternity at Naharda, on the Euphrates; and, according to the same authority, we are informed that Zerubbabel carried with him to Jerusalem all the secret knowledge which was the property of that Institution, and established a similar fraternity in Judea. This coincides with, and gives additional strength to, the traditions of the Royal Arch Degree.

As soon as the pious pilgrims had arrived at Jerusalem, and taken a needful rest of seven days, a tabernacle for the temporary purposes

of Divine worship was erected near the ruins of the ancient Temple, and a Council was called, in which Zerubbabel presided as King, Jeshua as High Priest, and Haggai as Scribe, or principal officer of State. It was there determined to commence the building of the second Temple upon the same holy spot which had been occupied by the first, and the people liberally contributed sixty-one thousand drachms of gold, and five thousand minas of silver, or nearly a quarter of a million of dollars, toward defraying the expenses; a sum which sinks into utter insignifiance, when compared with the immense amount appropriated by David and Solomon to the construction of their Temple.

The site having been thus determined upon, it was found necessary to begin by removing the rubbish of the old Temple, which still encumbered the earth, and prevented the workmen from making the necessary arrangements for laying the foundation. It was during this operation that an important discovery was made by three sojourners, who had not originally accompanied Zerubbabel, but who, sojourning some time longer at Babylon, followed their countrymen at a later period, and had arrived at Jerusalem just in time to assist in the removal of the rubbish. These three sojourners, whose fortune it was to discover that stone of foundation, so intimately connected with the history of Freemasonry, and to which we have before had repeated occasion to allude, are supposed by a Masonic tradition to have been Esdras, Zachariah, and Nehemiah, the three holy men, who, for refusing to worship the golden image, had been thrown by Nebuchadnezzar into a fiery furnace, from which they emerged uninjured. In the Chaldee language, they were known by the names of Shadrach, Meshach, and Abed-nego. It was in penetrating into some of the subterranean vaults, that the Masonic stone of foundation, with other important mysteries connected with it, were discovered by the three fortunate sojourners, and presented by them to Zerubbabel and his companions Jeshua and Haggai, whose traditionary knowledge of Masonry, which they had received in a direct line from the builders of the first Temple, enabled them at once to appreciate the great importance of these treasures.

As soon as that wonderful discovery was made, on which depends not only the existence of the Royal Arch Degree, but the most important mystery of Freemasonry, the Jews proceeded on a certain day, before the rising of the sun, to lay the foundation-stone of the second Temple; and for that purpose, we are told, Zerubbabel selected that stone of foundation which had been discovered by the three sojourners. On this occasion, we learn that the young rejoiced with shouts and acclamations, but that the ancient people disturbed them with their groans and lamentations, when they reflected on the superb magnificence of the first Temple, and compared it with the expected inferiority of the present structure. As in the building of the first Temple, so in this, the Tyrians and Sidonians were engaged to furnish the timber from the forests of Lebanon, and to conduct it in the same manner on floats by sea to Joppa.

Scarcely had the workmen well commenced their labors, when they were interrupted by the Samaritans, who made application to be permitted to unite with them in the construction of the Temple. But the Jews, who looked upon them as idolaters, refused to accept of their services. The Samaritans in consequence became their bitter enemies, and so prevailed, by misrepresentations, with the ministers of Cyrus, as to cause them to put such obstructions in the way of the construction of the edifice as seriously to impede its progress for several years. With such difficulty and danger were the works conducted during this period, that the workmen were compelled to labor with the trowel in one hand and the sword in the other. To commemorate these worthy craftsmen, who were thus ready, either to fight or to labor in the cause of God, as circumstances might require, the sword and trowel crosswise, or, as the heralds would say, *en saltire*, have been placed upon the Royal Arch Tracing-Board or Carpet of our English brethren. In the American ritual this expressive symbol of valor and piety has been unfortunately omitted.

In the seventh year after the restoration of the Jews, Cyrus, their friend and benefactor, died, and his son Cambyses, in Scripture called Ahasuerus, ascended the throne. The Samaritans and the other enemies of the Jews, now becoming bolder in their designs, succeeded in obtaining from Cambyses a peremptory order for the stoppage of all the works at Jerusalem, and the Temple consequently remained in an unfinished state until the second year of the reign of Darius, the successor of Cambyses.

Darius appears to have had, like Cyrus, a great friendship for the Israelites, and especially for Zerubbabel, with whom he was well acquainted in his youth. We are informed, as an evidence of this, that, when a private man, he made a vow, that if he should ever ascend the throne, he would restore all the vessels of the Temple that had been retained by Cyrus. Zerubbabel, being well aware of the friendly disposition of the king, determined, immediately after his accession to power, to make a personal application to him for his assistance and protection in rebuilding the Temple. Accordingly he departed from Jerusalem, and after a journey full of peril, in which he was continually attacked by parties of his enemies, he was arrested as a spy by the Persian guards in the vicinity of Babylon, and carried in chains before Darius, who, however immediately recognized him as the friend and companion of his youth, and ordering him instantly to be released from his bonds, invited him to be present at a magnificent feast which he was about to give to the Court. It is said that on this occasion, Zerubbabel, having explained to Darius the occasion of his visit, implored the interposition of his authority for

the protection of the Israelites engaged in the restoration of the Temple. The king promised to grant all his requests, provided he would reveal to him the secrets of Freemasonry. But this the faithful prince at once refused to do. He declined the favor of the monarch at the price of his infamy, and expressed his willingness rather to meet death or exile, than to violate his sacred obligations as a Mason. This firmness and fidelity only raised his character still higher in the estimation of Darius, who seems, indeed, to have been endowed with many noble qualities both of heart and mind.

It was on this occasion, at the feast given by King Darius, that, agreeably to the custom of Eastern monarchs, he proposed to his courtiers the question whether the power of wine, women, or the king, was the strongest. Answers were made by different persons, assigning to each of these the precedency in power; but when Zerubbabel was called on to assert his opinion, he declared that though the power of wine and of the king might be great, that of women was still greater, but that above all things truth bore the victory. Josephus says that the sentiments of Zerubbabel having been deemed to contain the most wisdom, the king commanded him to ask something over and above what he had promised as the prize of the victor in the philosophic discussion. Zerubbabel then called upon the monarch to fulfil the vow that he had made in his youth, to rebuild the Temple, and restore the vessels that had been taken away by Nebuchadnezzar. The king forthwith granted his request, promised him the most ample protection in the future prosecution of the works, and sent him home to Jerusalem laden with honors, and under the conduct of an escort.

Henceforth, although from time to time annoyed by their adversaries, the builders met with no serious obstruction, and finally, twenty years after its commencement, in the sixth year of the reign of Darius, and on the third day of the month Adar, 515 years B. C., the Temple was completed, the cope-stone celebrated, and the house solemnly dedicated to Jehovah with the greatest joy.

After this we hear nothing further of Zerubbabel, nor is the time or manner of his death either recorded in Scripture or preserved by Masonic tradition. We have, however, reason for believing that he lived to a good old age, since we find no successor of him mentioned until Artaxerxes appointed Ezra as the Governor of Judea, fifty-seven years after the completion of the Temple.

Zetland, Thomas Dundas, Earl of. One of the most noted of the noblemen of England, born in 1795, and initiated in the "Prince of Wales Lodge, No. 259," on June 18, 1830. Appointed J. G. Warden in 1832, Deputy in 1839, Pro. G. M. in 1840. Upon the decease of the Duke of Sussex, in 1843, the Earl became the chief ruler of the Craft, until March, 1844, when he was elected M. W. G. M., which office he held until 1870. He was Prov. G. Master of North and East Yorkshire from 1839 until he died, in 1873.

Zeus. Greatest of the national deities of Greece, son of Chronos and Rhea, brother of Poseidon and Hera, and husband of the latter. Mostly worshiped in Crete, Arcadia, and Dodona. Finally the great Hellenic divinity, identified with Jupiter of the Romans and Amon of the Libyans. Zeus was represented as of majestic form, holding in one hand a scepter, and in the other a thunderbolt, signified by the above symbol.

Zi. In the Izdubar legends, a kind of spiritual essence residing in every organic thing, each created object having its special Zi, of which the Supreme Being was a more exalted genus. Zi was also by a parity of reasoning regarded as the soul of man, and even man himself.

Zicu or **Ziggara.** The Accadian name for primeval matter.

Zif. (Iyar) אייר. The eighth month of the civil and the second of the sacred year of the Hebrews, commencing on the first of the new moon in the month of April. The name of this month is mentioned but once in the Scriptures, and then as relating to the date of the commencement of Solomon's Temple. (1 Kings vi. 1.) The month Bul, or Marchesvan, is mentioned as the date of the completion of the Temple. (*Ibid.*, vi., 38.)

Zillah. Wife of Lamech, mother of Tubal Cain and Naamah. One of the few females mentioned as of the antediluvian period.

Zinnendorf, Johann Wilhelm von. Few men made more noise in German Masonry, or had warmer friends or more bitter enemies, than Johann Wilhelm Ellenberger, who, in consequence of his adoption by his mother's brother, took subsequently the title of Von Zinnendorf, by which he is universally known. He was born at Halle, August 10, 1731. He was initiated into Masonry at the place of his birth. He afterward removed to Berlin, where he received the appointment of General Staff Surgeon, and chief of the medical corps of the army. There he joined the Lodge of the Three Globes, and became an ardent disciple of the Rite of Strict Observance, in which he took the Order name of *Eques à lapide nigro*. He was elected Master of the Scottish Lodge. He had the absolute control of the funds of the Order, but refusing to render any account of the disposition which he had made of them, an investigation was commenced. Upon this, Zinnendorf withdrew from the Rite, and sentence of excommunication was immediately afterward pronounced against him.

Zinnendorf in return declared the Strict Observance an imposture, and denounced its theory of the Templar origin of Masonry as false.

In the meantime, he sent his friend Hans Carl Baumann to Stockholm, that he might receive manuscripts of the degrees of the Swedish system which had been promised him by Carl Friederich von Eckleff, Scottish Grand Master of the Chapter in that city. Baumann returned with the manuscripts, which, however, it appears from a subsequent declaration made by the Duke of Sudermania, were very imperfect.

But, imperfect as they were, out of them Zinnendorf constructed a new Rite in opposition to the Strict Observance. Possessed of great talent and energy, and, his enemies said, of but little scrupulousness as to means, he succeeded in attracting to him many friends and followers. In 1766, he established at Potsdam the Lodge "Minerval," and in 1767, at Berlin, the Lodge of the "Three Golden Keys." Masons were found to give him countenance and assistance in other places, so that on June 24, 1770, twelve Lodges of his system were enabled to unite in the formation of a body which they called the Grand Lodge of all the Freemasons of Germany.

The success of this body, under the adverse circumstances by which it was surrounded, can only be attributed to the ability and energy of its founder, as well as to the freedom with which he made use of every means for its advancement without any reference to their want of firmness. Having induced the Prince of Hesse-Darmstadt to accept the Grand Mastership, he succeeded, through his influence, in obtaining the recognition and alliance of the Grand Lodge of England in 1773; but that body seven years after withdrew from the connection. In 1774, Zinnendorf secured the protectorship of the King of Prussia for his Grand Lodge. Thus patronized, the Grand Lodge of Germany rapidly extended its influence and increased in growth, so that in 1778 it had thirty-four Lodges under its immediate jurisdiction, and provincial Lodges were established in Austria, Silesia, Pomerania, Lower Saxony, and Russia. Findel explains this great accession of strength by supposing that it could only have been the consequence of the ardent desire of the German Masons to obtain the promised revelations of the high degrees of the system of Zinnendorf.

In 1774, Zinnendorf had been elected Grand Master, which office he held until his death.

But he had his difficulties to encounter. In the Lodge "Royal York," at Berlin, he found an active and powerful antagonist. The Duke of Sudermania, Grand Master of Sweden, in an official document issued in 1777, declared that the Warrant which had been granted by Eckleff to Zinnendorf, and on the strength of which he had founded his Grand Lodge, was spurious and unauthorized; the Grand Lodge of Sweden pronounced him to be a fomenter of disturbances and an insolent calumniator of the Swedish Grand Master, and in 1780 the Grand Lodge of England withdrew from its alliance.

But Zinnendorf was undismayed. Having quit the service of the government in 1779, he made a journey to Sweden in an unsuccessful effort to secure all the documents connected with the Swedish system. Returning hence, he continued to preside over the Grand Lodge with unabated zeal and undiminished vigor until his death, which took place June 6, 1782.

Von Zinnendorf undoubtedly committed many errors, but we cannot withhold from him the praise of having earnestly sought to introduce into German Masonry a better system than the one which was prevailing in the last quarter of the eighteenth century.

Zinnendorf, Rite of. The Rite invented by Count Von Zinnendorf, and fabricated out of imperfect copies of the Swedish system, with additions from the Illuminism of Avignon and the reveries of Swedenborg. It consisted of seven degrees, divided into three sections as follows:

I. *Blue Masonry.*
1. Apprentice.
2. Fellow-Craft.
3. Master.

II. *Red Masonry.*
4. Scottish Apprentice and Fellow-Craft.
5. Scottish Master.

III. *Capitular Masonry.*
6. Favorite of St. John.
7. Chapter of the Elect.

It was practised by the Grand Lodge of Germany, which had been established by Zinnendorf, and by the Lodges of its obedience.

Zinzendorf, Count von, Nicolaus Ludwig. Founder of the existing sect of Moravian brethren; also of a religious society which he called the "Order of the Grain of Mustard-Seed." He was ordained bishop of the Moravians in 1737, and at request of King Frederick William I. of Prussia, went to London, and was received by Wesley. In 1741 he proceeded to Bethlehem, in America, and founded the Moravian settlements. The prolific author of a hundred volumes. He was born at Dresden in 1700, and died in 1760.

Zion. Mount Zion was the southwestern of the three hills which constituted the high table-land on which Jerusalem was built. It was the royal residence, and hence it is often called "the city of David." The name is sometimes used as synonymous with Jerusalem.

Zithern. An instrument of music of 28 strings drawn over a shallow box; both hands are employed in playing on it.

Zizon. This is said, in one of the Ineffable degrees of the Scottish Rite, to be the name of the balustrade before the Sanctum Sanctorum. There is no such word in Hebrew,

but it may be a corruption of the Talmudic זיזא, *ziza*, which Buxtorf (*Lex. Talm.*) defines as "a beam, a little beam, a small rafter."

Zoan. An Egyptian town, known to the Greeks as Tanais, presumed to have been founded 3700 B.C., and probably the residence of the Pharaohs of the Exodus.

Zodiac. Many of the Egyptian temples contain astronomical representations; notably those of Esneh, Contra Latopolis, and Denderah, which were famous for their zodiacal ceilings. Antiquity was accorded to the records of the Egyptian empire by calculations made from the positions of the stars on the monuments and on these ceilings. Closer criticism now reveals these positions to be fanciful and the data unreliable. The zodiac of Denderah has been removed to Paris, where it forms the chief ornament of the museum of the Louvre. Those remaining in Egypt are suffering from deterioration. Crosses will be found to be a portion of five of the signs of the zodiac.

Zodiac, Masonic. (*Zodiaque Maçonnique.*) A series of twelve degrees, named after the twelve signs of the Zodiac, the first being the Ram. It was in the series of the Metropolitan Chapter of France, and in the manuscript collection of Peuvret.

Zohar. (Heb. זהר, *splendor.*) After the surrender of Jerusalem, through the victory of Vespasian, among the fugitives was Rabbi Simon Ben Jochai, who remained an Anchorite for twelve years, became visionary, and believed he was visited by the prophet Elias. His son, Rabbi Eliezer, and his clerk, Rabbi Abba, when visiting him, took down his pronounced Divine precepts, which were in time gathered and formed into the famous Sohar or Zohar. From this work, the *Sepher Jetzirah*, and the *Commentary of the Ten Sephiroth* was formed the Kabbala. The Zohar, its history, and as well that of its author, overflow with beautiful yet ideal mysticism.

Zohariti. (*"The Illuminated."*) A society founded by Jacob Franck at the beginning of the last century.

Zonar. The symbolic girdle of the Christians and Jews worn in the Levant, as a mark of distinction, that they may be known from the Mohammedans.

Zoroaster. More correctly, *Zarathustra.* He was the legislator and prophet of the ancient Bactrians, out of whose doctrines the modern religion of the Parsees has been developed. As to the age in which Zoroaster flourished, there have been the greatest discrepancies among the ancient authorities. The earliest of the Greek writers who mentions his name is Xanthus of Lydia, and he places his era at about 600 years before the Trojan war, which would be about 1800 years before Christ. Aristotle and Eudoxus say that he lived 6,000 years before Plato; while Berosus, the Babylonian historian, makes him a king of Babylon, and the founder of a dynasty which reigned over Babylon between 2200 and 2000 B.C. The Parsees are more moderate in their calculations, and say that their prophet was a contemporary of Hystaspes, the father of Darius, and accordingly place his era at 550 B.C. Haug, however, in his *Essays on the Sacred Language, etc., of the Parsees*, declares that this supposition is utterly groundless. He thinks that we can, under no circumstances, assign him a later date than 1000 B.C., and is not even disinclined to place his era much earlier, and make him a contemporary of Moses.

Bro. Albert Pike, who has devoted much labor to the investigation of this confused subject of the Zoroastrian era, says, in an able article in Mackey's *National Freemason* (vol. iii., No. 3):

"In the year 1903 before Alexander, or 2234 B.C., a Zarathustrian king of Media conquered Babylon. The religion even then had degenerated into Magism, and was of unknown age. The unfortunate theory that Vitaçpa, one of the most efficient allies of Zarathustra, was the father of Darius Hystaspes, has long ago been set at rest. In the Chaldean lists of Berosus, as found in the Armenian edition of Eusebius, the name *Zoroaster* appears as that of the Median conqueror of Babylon; but he can only have received this title from being a follower of Zarathustra and professing his religion. He was preceded by a series of eighty-four Median kings; and the real Zarathustra lived in Bactria long before the tide of emigration had flowed thence into Media. Aristotle and Eudoxus, according to Pliny, place Zarathustra 6000 years before the death of Plato; Hermippus, 5000 years before the Trojan war. Plato died 348 B.C.; so that the two dates substantially agree, making the date of Zarathustra's reign 6300 or 6350 B.C., and I have no doubt that this is not far from the truth."

Bunsen, however (*God in History*, vol. i., b. iii., ch. vi., p. 276), speaks of Zarathustra Spitama as living under the reign of Vistaspa toward the year 3000 B.C., certainly not later than toward 2500 B.C. He calls him "one of the mightiest intellects and one of the greatest men of all time"; and he says of him: "Accounted by his contemporaries a blasphemer, atheist, and firebrand worthy of death; regarded even by his own adherents, after some centuries, as the founder of magic, by others as a sorcerer and deceiver, he was, nevertheless, recognized already by Hippocrates as a great spiritual hero, and esteemed the earliest sage of a primeval epoch —reaching back to 5000 years before their date—by Eudoxus, Plato, and Aristotle."

The name of this great reformer is always spelled in the Zendavesta as *Zarathustra*, with which is often coupled *Spitama;* this, Haug says, was the family name, while the former was his surname, and hence both he and Bunsen designate him as Zarathustra Spitama. The Greeks corrupted Zarathustra into *Zarastrades* and *Zoroastres*, and the Romans into *Zoroaster*, by which name he has always, until recently, been known to

Europeans. His home was in Bactria, an ancient country of Asia between the Oxus River on the north and the Caucasian range of mountains on the south, and in the immediate vicinity, therefore, of the primal seat of the Aryan race, one of whose first emigrations, indeed, was into Bactria.

The religion of Zoroaster finds its origin in a social, political, and religious schism of the Bactrian Iranians from the primitive Aryans. These latter led a nomadic and pastoral life in their native home, and continued the same habits after their emigration. But a portion of these tribes, whom Haug calls "the proper Iranians," becoming weary of these wanderings, after they had reached the highlands of Bactria abandoned the pastoral and wandering life of their ancestors, and directed their attention to agriculture. This political secession was soon followed by wars, principally of a predatory kind, waged, for the purpose of booty, by the nomadic Aryans on the agricultural settlements of the Iranians, whose rich fields were tempting objects to the spoiler.

The political estrangement was speedily and naturally followed by a religious one. It was at this time that Zoroaster appeared, and, denouncing the nature-worship of the old Aryan faith, established his spiritual religion, in which, says Bunsen, "the antagonisms of light and darkness, of sunshine and storm, become transformed into antagonisms of good and evil, of powers exerting a beneficent or corrupting influence on the mind."

The doctrine of pure Zoroastrianism was monotheistic. The Supreme Being was called *Ahuramazda*, and Haug says that Zoroaster's conception of him was perfectly identical with the Jewish notion of Jehovah. He is called "the Creator of the earthly and spiritual life, the Lord of the whole universe, at whose hands are all the creatures." He is wisdom and intellect; the light itself, and the source of light; the rewarder of the virtuous and the punisher of the wicked.

The dualistic doctrine of Ormuzd and Ahrimanes, which has falsely been attributed to Zoroaster, was in reality the development of a later corruption of the Zoroasteric teaching. But the great reformer sought to solve the puzzling question of the origin of evil in the world, by supposing that there existed in Ahuramazda two spirits, inherent in his nature, the one positive and the other negative. All that was good was real, existent; while the absence of that reality was a non-existence or evil. Evil was the absence of good as darkness was the absence of light.

Zoroaster taught the idea of a future life and the immortality of the soul. The doctrine of the resurrection is one of the principal dogmas of the Zendavesta. He also clearly inculcated the belief of a heaven and a hell. The former was called the house of hymns, because the angels were supposed to sing hymns there; the latter the house of destruction, and to it were relentlessly consigned the poets and priests of the old Aryan religion.

The doctrine of sacred names, so familiar to the Hebrews, was also taught by Zoroaster. In one of the Yashts, a portion of the Zendavesta, Ahuramazda tells Zarathustra that the utterance of one of his sacred names, of which he enumerates twenty, is the best protection from evil. Of these names, one is *ahmi*, "I am," and another, *ahmi yat ahmi*, "I am who I am." The reader will be reminded here of the holy name in Exodus, *Ehyeh asher Ehyeh*, or "I am that I am."

The doctrine of Zoroaster was not forever confined to Bactria, but passed over into other countries; nor in the transmission did it fail to suffer some corruption. From its original seat it spread into Media, and under the name of Magism, or the doctrine of the Magavas, i. e., the mighty ones, was incorporated at Babylon with the Chaldean philosophy, whence we find its traces in the Rabbinism and the Kabbalism of the Hebrews. It was carried, too, into Persia, where it has been developed into the modern and still existing sect of the Parsees, of whom we now find two divisions, the conservatives and liberals; the former cultivating the whole modified doctrine of Zoroaster, and the latter retaining much of the doctrine, but rejecting to a very great extent the ceremonial ritual.

Zschokke, J. H. D. One of the most eminent Masons and German authors known to this century. Born at Magdeburg, 1771, died 1848.

Zuni Indians. A tribe inhabiting New Mexico, U. S., whose mystic services have attracted the attention of Masonic scholars in consequence of their similarity to those in vogue by the Masonic Fraternity. These Indians have a formal religious initiation, in which the suppliant kneels at the altar to take his vows, after being received upon the point of an instrument of torture to the flesh. Among their forms and ceremonies are facing the east, circumambulation, tests of endurance, and being peculiarly clothed. Incense is burned, and the sun worshiped at its rising.

Zurthost. The name given by the modern Parsees to Zarathustra or Zoroaster. They call him their prophet, and their religious sect the Zarthosti community.

PRONOUNCING DICTIONARY

FOR USE BY THE

MASONIC FRATERNITY,

Containing over Fourteen Hundred Words liable to Mispronunciation. The Form of Instruction for Pronunciation is the same Defined in the American Dictionary, by Noah Webster, LL.D.

BY CHARLES T. McCLENACHAN.

KEY TO THE PRONUNCIATION.

VOWELS, REGULAR LONG AND SHORT SOUNDS.

Ā, ā (long), as in *Āle, Fāte.*
Ă, ă (short), as in *Ădd, Făt.*
Ä, ä (Italian), as in *Ärm, Fäther, Fär.*
Ē, ē (long), as in *Ēve, Mēte.*
Ĕ, ĕ (short), as in *Ĕnd, Mĕt.*
Ī, ī (long), as in *Īce, Fīne.*
Ĭ, ĭ (short), as in *Ĭll, Fĭn.*
Ō, ō (long), as in *Ōld, Nōte.*
Ŏ, ŏ (short), as in *Ŏdd, Nŏt.*
Ū, ū (long), as in *Ūse, Hūme.*
Ŭ, ŭ (short), as in *Ŭs, Hŭm.*
Ȳ, ȳ (long), as in *Mȳ, Flȳ.*
Y̆, y̆ (short), as in *Oy̆st, Ny̆mph.*

The above simple process is adopted, omitting instruction relating to diphthongs or tripthongs, occasional sounds, or references to consonants.

ACCENT.—The principal accent is denoted by a heavy mark; the secondary, by a lighter mark, as in *Ab'ra-ca-dab'ra.* In the division of words into syllables, these marks also supply the place of the hyphen.

WORDS OF DOUBTFUL PRONUNCIATION.	PROPER MASONIC PRONUNCIATION.	NOTATIONS.
Ab	Ăb	Heb. Father; 11th Hebraic month.
Abaciscus	Ă'bă-cis'cŭs	Flooring blocks.
Abacus	Ăb'a-cŭs	A drawing-board—a tray.
Abaddon	A-băd'don	The destroyer, or angel of darkness.
Abazar	Ă'bă-zăr	Master of Ceremonies of 6th Degree.
Abchal	Ăb'chăl	
Abda	Ăb'dă	Father of Adoniram.
Abdamon	Ăb'dă'mŏn	To serve.
Abdiel	Ăb'dĭel	Servant of God.
Abditorium	Ăb'dĭ-to'rĭ-ŭm	A secret place for deposit of records.
Abelites	Ā'bel-ītes	A secret order of the 18th century.
Abib	Ăb'ĭb	Seventh Jewish month.

WORDS OF DOUBTFUL PRONUNCIATION.	PROPER MASONIC PRONUNCIATION.	NOTATIONS.
Abibala	Ăb′i-bă-lă	Derived from Hebrew Abi and Balah.
Abibalk	Ăb′i-bălk	Chief of the three assassins.
Abif	Ăb-if′	Literally, his father.
Abihael	A-bi′ha-ĕl	Father of Strength.
Abihu	Ăb′i-hū	A son of Aaron.
Abiram	Ăb-i′răm	Abiram Akisop, traitorous crafts-man.
Ablution	Ăb-lū′shun	Washing, baptizing.
Abrac	Ăb-răc′	Acquiring the science of Abrac.
Abracadabra	Ăb′ră-că-dăb′ră	A term of incantation.
Abraxas	A-brăx′as	A symbol of the year.
Acacia	A-că′ci-ă	Symbolic of the soul's immortality.
Acanthus	A-căn′thus	A part of the Corinthian capital.
Accessory	Ak-ses′so-rĭ	Private companionship.
Accolade	Ăc′co-lāde′	The welcome into knighthood.
Aceldama	Ă-cĕl′da-mă	Field of blood.
Achad	Ă-chăd	Ă-kăd.
Acharon Schilton	Ă′chă-rŏn Schil-tŏn	Ă′kă-rŏn Schil-ton.
Achias	Ă-chī′as	Ă-kē-as.
Achishar	Ăc-hī′shar	One over the household of Solomon.
Achmetha	Ăch′mē-thă	Name of a Hebrew city.
Achtariel	Ăch-tă′rĭ-el	Kabbalistic name of God.
Acolyte	Ak′ō-līte	Candle bearer. Church servant.
Acousmatici	Ă′coūs-mă-tĭ′cī	Ă-coos′ma-te′cē.
Adah	Ā′dă	Jephtha's daughter.
Adar	Ā′dar	The twelfth Jewish month.
Adarel	Ă′dă-rĕl	Angel of fire.
Adept	Ă-dept′	An expert.
Adeptus Coronatus	Ăd-ept′us Cōrō-na′tus	Seventh Degree of the Swedish Rite.
Adhere	Ad-hēre′	Cling to.
Adjudicate	Ad-jū′di-kāte	To determine.
Admah	Ăd′mă	A Hebrew city.
Ad Majorum Dei Gloriam	Ăd mā-jō-rum dā-ē glō-ri-ām	To the greater glory of God.
Adonai	Ă′dō-nā′ĭ	Ă-dō-năh′e. The Lord.
Adonhiram	Ăd′on-hī′ram	Signifying the master who is exalted.
Adoniram	Ăd′ō-nī′ram	Son of Abda.
Adonis	Ăd-ō′nĭs	Son of Myrrha and Cinyras.
Adult	Ă-dult′	Of full age.
Ad vitam	Ad vē-tăm	For life.
Adytum	Ăd′y-tum	A retired part of the ancient temples.
Æneid	Æ-nē′id	A creation of Virgil.
Æon	Æ-ŏn	Ē′on. Age or duration of anything.
Affiliate	Af-fil′e-āte	An adopted one.
Agapæ	Ăg′a-pæ	Ag′a-pe. Love feasts.
Agate	Ăg′it	The eighth stone in the breastplate.
Agathopades	Ă′gă-thō-pă′des	Ecclesiastical Order of 16th century.
Age	Āje	Of a given number of years.
Agenda	Ă-jĕn′da	Order of business. Book of precepts.
Agla	Ăg′lă	One of the Kabbalistic names of God.
Agnus Dei	Ăg′nus Dē′ĭ	Ag′nŭs Dā′ē. Lamb of God.

WORDS OF DOUBTFUL PRONUNCIATION.	PROPER MASONIC PRONUNCIATION.	NOTATIONS.
Ahad	Ā′had	A name of God.
Ahabath Olam	Ā′hă-băth Ō′lăm	Eternal love.
Ahashuerus	A-hăs′-u-ē′rus	Name of a Persian king.
Ahel	Ā′hel	A curtain of the Tabernacle.
Ahiah	Ā-hī′ăh	Ā-hē′ă. One of the scribes of Solo-
Ahilud	Ā-hīl′ud	The father of Josaphat. [mon.
Ahiman Rezon	Ā-hī′man Rē-zŏn′	The will of selected brethren.
Ahinadab	A-hĭn′a-dăb	The son of Jetdo.
Ahisamach	A-hĭs′a-măk	The father of Aholiab.
Ahisar	A-hī′săr	Ā-hī′săr.
Aheshar	Ā-hī′shar	An officer over Solomon's house-
Aholiab	Ā-hō′li-ăb	A skilful artificer. [hold.
Ahriman	Ăh′rĭ-man	Principle of evil in Zoroaster system.
Aichmalotarch	Āĭch-mal′ō-tarch	The Prince of Captivity.
Aixlachapelle	Āks′-lă-shä′pel′	A city of Germany.
Akar	Ā′kăr	Or Achar, a password.
Akirop	Ā-kī′rop	One of the ruffians of the Third De-
Alapa	Ā-lă-pă	A symbol of manumission. [gree
Alchemy	Ăl′-ki-my	The science of Chemistry.
Aldebaran	Ăl-deb′a-ran	A star of the first magnitude.
Aleppo	Ā-lĕp′pō	A town in northern Syria.
Alethophile	Ā-lē′thō-phile	Lover of Truth.
Alfader	Ăl-fā′der	Chief God of the Scandinavians.
Algabil	Ăl′gă-bĭl	Signifying The Builder.
Allah	Ăl′ä	The God of the Moslem.
Allegiance	Ăl-lē′jance	Fealty.
Allegory	Ăl′lĕ-gō-ry	A fable, or figurative expression.
Allelujah	Ăl-le-lū′yă	Praise Jehovah.
Alleviate	Ăl-lē′ve-āte	To relieve.
Allies	Al-līz′	Companions in enterprise.
Allocution	Ăl-lō-kū′shun	The official opening address.
Almoner	Ăl′mō-ner	Dispenser of alms.
Alms	Ämz	Charitable gifts.
Al-om-Jah	Ăl-ōm-jăh	A name of the Supreme Being.
Alpha	Ăl′fă	Greek letter A. [land.
Alpina	Ăl-pī-nă	Name of Grand Lodge of Switzer-
Als	Ălz	The All-powerful God.
Al Shaddai	Ăl-shăd′dā-e	The second sanctified name of God.
Al-Sirat	Ăl′ Sī-răt′	The path.
Alycuber	Ăl-e-kū′ber	Master of the Tribe of Manasseh.
Amal-Sagghi	Ămăl-săg′ghī	Fifth step of Kadosh ladder.
Amar-jah	Ā′măr-jăh	God spake.
Amboth	Ăm′bōth	A country in Syria.
Amenti	Ă-men′-tĭ	Place of Judgment of the Dead.
Ameth	Ā′mĕth	See *Emeth*.

Zabulon	Zā′bū-lŏn	Tenth son of Jacob. [court.
Zadok	Zā′dŏk	Righteous. Son of Ahitub, a priest.
Zadki-el	Zăd′kĭ-el	Angel of the planet Jupiter.
Zaherlaherbon	Zā-her′lā-her-bon′	
Zaphnath-paaneah	Zăph-năth-paa′ne′ăh	Savior of the world.
Zarathustra	Zā′ra-thūs-trā	Name of Zoroaster in Zend language.
Zarriel	Zăr′rĭ-el	The angel that governs the sun.
Zarthan	Zăr′thăn	See *Zeredatha.*
Zebedee	Zĕb′e-dē Zeb-ē′de	Jah is gift. Husband of Salome.
Zedekiah	Zĕd′e-kī′ă	Jah is might. A false prophet.
Zend-Avesta	Zĕnd Ă-vĕs′tă	Persian Bible in Zend language.
Zennaar	Zĕn′năăr	Sacred cord used in Hindustanee [initiation.
Zeraias	Zē-rāi′ăs	
Zerbal	Zĕr′băl	King Solomon's Captain of Guards.
Zeredatha	Ze-rĕd′ā-tha	See *Clay Ground.*
Zerubbabel	Zē-rūb-ba′bel	A prince of the House of Judah.
Zeus	Zē′ŭs	The chief deity of the Greeks.
Zicu	Zĭ′cū	
Zif	Zĭf	Blossom. The second Jewish month.
Zipporah	Zĭp-pō′rā	Little bird. Wife of Moses.
Zithern	Zĭth′ern	A musical instrument of 28 strings.
Zizon	Ze′zŏn	Balustrade.
Zodiac	Zō′de-ak	An imaginary belt in the heavens.
Zohar	Zō′hăr	Distinction, nobility.
Zohariti	Zō′ha-rĭ′tĭ	Nobility.
Zoroaster	Zō-rō-as′ter	Founder of the Parsee religion.
Zschokke	Zschŏk′kĕ	An eminent German Masonic au-
Zuni	Zū′nĭ	Indian tribe of New Mexico. [thor.
Zurthost	Zŭr-thōst	Modern Parsee name for Zoroaster.
Zuzim	Zū′zĭm	Strong. A primitive race.

FOREWORD

"I once delivered an address before a Lodge on the subject of the external changes which Freemasonry had undergone since the period of its revival in the commencement of the eighteenth century. The proper treatment of the topic required a reference to German, to French, and to English authorities, with some of which I am afraid that many of my auditors were not familiar. At the close of the address, a young and intelligent brother inquired of me how he could obtain access to the works which I had cited, and of many of which he confessed, as well as of the facts that they detailed, he now heard for the first time."—ALBERT G. MACKEY.

The above observation by the principal author of this Work has suggested the advisability of appending this Bibliography. It will enable the student who is in search of more light on the sources of our Masonic lore to become familiar with the names of the authors and the titles of the works, in the several languages, from which has been drawn the great fund of material, presented in this "Encyclopaedia of Freemasonry."

T. M. H. CO.
